

RRC STAFF OPINION

Please Note: This communication is either: 1) only the recommendation of an RRC staff attorney as to action that the attorney believes the Commission should take on the cited rule at its next meeting; or 2) an opinion of that attorney as to some matter concerning that rule. The agency and members of the public are invited to submit their own comments and recommendations (according to RRC rules) to the Commission.

AGENCY: Environmental Management Commission

RULE CITATION: 15A NCAC 02B .0295

RECOMMENDED ACTION:

X Approve, but note staff's comment

Object, based on:

Lack of statutory authority

Unclear or ambiguous

Unnecessary

Failure to comply with the APA

Extend the period of review

X Allow members of the public to withdraw their letters requesting legislative review pursuant to G.S. 150B-21.3(b2)

COMMENT:

The Rules Review Commission reviewed this Rule at its August 2015 meeting. At that time, the Commission objected to the Rule on two grounds:

1) Failure to comply with the Administrative Procedure Act, finding that changing "are" to "may" in Subparagraph (l)(6) after publication constitutes a "substantial change" pursuant to G.S. 150B-21.2(g); and

2) Lack of statutory authority to allow an alternative buffer mitigation option to be an accepted mitigation option. Specifically, the Commission found that Session Law 2014-95 required the agency to adopt a rule that was substantively identical to the recommended rule text contained in the April 10, 2014 Consolidated Buffer Mitigation Rule Stakeholder Report. The Commission found that the agency did not comply with the statutory mandate because it moved the language that was identified as an Alternative Buffer Mitigation Option

Amanda J. Reeder
Commission Counsel
Issued October 7, 2015

in the stakeholder report (located in Paragraph m) to an accepted mitigation option in Paragraph l of the permanent rule. Therefore, the agency did not act within the statutory authority granted to it by the Session Law.

Before the Commission reviewed the Rule at its August meeting, it had received 14 letters objecting to the Rule and requesting a delayed effective date and legislative review pursuant to G.S. 150B-21.3(b2). Those are attached as Appendix A. Most of those letters included comments that the letter writer objected to the Rule because of the deviation from the Session Law and stated that the Environmental Management Commission lacked statutory authority to do so. At its August meeting, the RRC adopted this reason as the second ground for the RRC's objection.

The Environmental Management Commission responded with a rewritten rule that staff believes satisfies both objections. Staff recommends approval of the rewritten rule.

After the EMC met and approved the rewritten rule, 12 of the individuals who submitted letters of objection to the Rule requested to withdraw their objection letters. Those are attached as Appendix B.

The Commission has a rule to determine whether to allow an individual to withdraw a previously filed objection letter. Rule 26 NCAC 05 .0113 states that the Commission will consider the request at the meeting before it approves the Rule. Therefore, before determining whether to approve the rewritten rule, the Commission must consider whether it should allow these 12 individuals to withdraw their letters submitted pursuant to G.S. 150B-21.3(b2).

Rule 26 NCAC 05 .0113 states:

26 NCAC 05 .0113 WITHDRAWAL OF OBJECTION LETTERS

- (a) A person may request that the Commission allow withdrawal of his or her previously filed objection letter to a rule prior to the meeting at which that rule is approved as set out below.
- (b) A request to withdraw an objection letter after a rule has been approved is untimely and shall be returned to the requesting party with a denial by the Commission staff.
- (c) The original request to withdraw a previously filed objection letter must be signed by the person who wrote the objection letter, notarized and delivered to the Commission by the close of business on the last day prior to the meeting at which the rule that is the subject of the objection letter is approved.
- (d) The Commission shall act on the request to withdraw the previously filed objection letter at the meeting. The staff attorney offering comments on the rule shall also announce how the request to withdraw the previously filed objection letter would affect the rule's effective date and whether the rule would be subject to legislative review.
- (e) The Commission shall base its decision on:
 - (1) the factual circumstances concerning the objection letter and the request to withdraw any letter;

Amanda J. Reeder
Commission Counsel
Issued October 7, 2015

- (2) any defects in either the objection letter or the request to withdraw the objection letter;
- (3) the history of the particular rulemaking;
- (4) the notice provided to all parties and the Commission;
- (5) the good faith of the person making the withdrawal request; and
- (6) any factors the Commission may use in deciding whether to grant a waiver from its rules.

*History Note: Authority G.S. 143B-30.1;
Eff. December 1, 2010.*

In determining whether to allow the individuals to withdraw the letters, the Commission is required to make the decision based upon factors set forth in Paragraph (e) of Rule 26 NCAC 05 .0113. The individuals asking to withdraw the previously filed letters have all asserted that the changes EMC made to the Rule in response to the Commission objection also addressed their concerns. The statements from these individuals address the change in factual circumstances and the history of rulemaking since their letters were filed. Staff believes that all of the letters submitted to request legislative review, and the letters filed to withdraw those letters, meet all statutory and regulatory requirements.

Staff recommends that the Commission allow the individuals to withdraw their letters, as the basis of the objection raised by those individuals and the RRC, has been satisfied.

1 15A NCAC 02B .0295 is adopted with changes as published in 29:16 NCR 1939-1950 as follows:

2
3 15A NCAC 02B .0295 MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND
4 MAINTENANCE OF RIPARIAN BUFFERS

5 (a) PURPOSE. The purpose of this Rule is to set forth the mitigation requirements that apply to applicants listed in
6 ~~Subparagraphs (1) and (2) of this Paragraph (c) of this Rule~~ and to set forth requirements for buffer mitigation
7 providers. ~~Buffer mitigation is required when one of the following applies:~~

8 ~~(1) The applicant has received an authorization certificate for impacts that cannot be avoided or~~
9 ~~practicably minimized pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607 of this~~
10 ~~Subchapter; or~~

11 ~~(2) The applicant has received a variance pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607~~
12 ~~of this Subchapter and is required to perform mitigation as a condition of a variance approval.~~

13 (b) DEFINITIONS. For the purpose of this Rule, these terms shall be defined as follows:

14 (1) "Authority" means either the Division or a local government that has been delegated or designated
15 pursuant to Rules .0233, .0243, .0250, .0259, **.0267, .0267**, or .0607 of this Subchapter to implement
16 the riparian buffer program.

17 ~~(2) "Compensatory Buffer Mitigation Bank" means a buffer mitigation site created by a mitigation~~
18 ~~provider and approved for mitigation credit by the Division through execution of a mitigation~~
19 ~~banking instrument.~~

20 ~~(2)(3)~~ "Division" means the Division of Water Resources of the North Carolina Department of
21 Environment and Natural Resources.

22 ~~(3)(4)~~ "Enhancement Site" means a riparian zone site characterized by conditions between that of a
23 restoration site and a preservation site such that the establishment of woody stems (i.e., tree or shrub
24 species) will maximize nutrient removal and other buffer functions.

25 ~~(4)(5)~~ "Hydrologic Area" means the Watershed Boundary Dataset (WBD), located at no cost at
26 http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-
27 6DC7-4EC3-88A9-03E6B7D55653} using the eight-digit Hydrologic Unit Code (HUC) prepared
28 by the United States Geological Survey.

29 ~~(5)(6)~~ "Locational Ratio" means the mitigation ratio applied to the mitigation requirements based on the
30 location of the mitigation site relative to the impact site as set forth in Paragraph (f).

31 ~~(7)~~ "Mitigation banking instrument" means the legal document for the establishment, operation, and
32 use of a mitigation bank.

33 ~~(6)(8)~~ "Monitoring period" means the length of time specified in the approved mitigation plan during
34 which monitoring of vegetation success and other anticipated benefits to the adjacent water as listed
35 in the ~~authorization certificate~~ mitigation approval is done.

36 ~~(7)(9)~~ "Non-wasting endowment" means a fund that generates enough interest to cover the cost of the long
37 term monitoring and maintenance.

1 ~~(8)~~(10) "Outer Coastal Plain" means the portion of the state shown as the Middle Atlantic Coastal Plain (63)
2 on Griffith, et al. (2002) "Ecoregions of North and South Carolina." Reston, VA, United States
3 Geological Survey available at no cost at http://www.epa.gov/wed/pages/ecoregions/ncsc_eco.htm.

4 ~~(9)~~(11) "Preservation Site" means riparian zone sites ~~that that, as determined by a site visit conducted by~~
5 ~~the Authority,~~ are characterized by a ~~natural~~ forest consisting of the forest strata and diversity of
6 species appropriate for the ~~location, Omernik Level III~~ ecoregion. ~~[ecoregion available at no cost at~~
7 ~~http://www.epa.gov/wed/pages/ecoregions/level_iii_iv.htm]~~

8 ~~(10)~~(12) "Restoration Site" means riparian zone sites that are characterized by an absence of trees and by a
9 lack of dense growth of smaller woody stems (i.e., shrubs or saplings) or sites that are characterized
10 by scattered individual trees such that the tree canopy is less than 25 percent of the cover and by a
11 lack of dense growth of smaller woody stems (i.e., shrubs or saplings).

12 ~~(11)~~(13) "Riparian buffer mitigation unit" means a unit representing a credit of riparian buffer mitigation ~~that~~
13 ~~offsets one square foot of riparian buffer impact, as set forth in Paragraph (m).~~

14 ~~(12)~~(14) "Riparian wetland" means a wetland that is found in one or more of the following landscape
15 positions:

- 16 (A) in a geomorphic floodplain;
- 17 (B) in a natural topographic crenulation;
- 18 (C) contiguous with an open water equal to or greater than 20 acres in size; or
- 19 (D) subject to tidal flow regimes excluding salt/brackish marsh wetlands.

20 ~~(15)~~ "Stem" means a woody seedling, sapling, ~~[shrub]~~ shrub, or tree, no less than 10 ~~[cm]~~ centimeter in
21 ~~height.~~

22 ~~(13)~~~~(15)~~(16) "Urban" means an area that is ~~either~~ designated as an urbanized area under the most recent
23 federal decennial census available at no cost at <http://www.census.gov/> or ~~is located~~ within the
24 corporate limits of a municipality.

25 ~~(14)~~~~(16)~~(17) "Zonal Ratio" means the mitigation ratio applied to impact amounts in the respective zones
26 of the riparian buffer as set forth in Paragraph (e) of this Rule.

27 (c) ~~MITIGATION REQUIREMENTS. APPLICATION REQUIREMENTS, MITIGATION SITE~~
28 ~~REQUIREMENTS AND MITIGATION OPTIONS.~~ Buffer mitigation is required when one of the following applies:

29 (1) ~~The applicant has received an authorization certificate for impacts pursuant to [Rules] Rule .0233,~~
30 ~~.0243, .0250, .0259, [-0267] .0267, or .0607 of this Subchapter and is required to perform mitigation~~
31 ~~as a condition of the authorization certificate; or~~

32 (2) ~~The applicant has received a variance pursuant to [Rules] Rule .0233, .0243, .0250, .0259, [-0267]~~
33 ~~.0267, or .0607 of this Subchapter and is required to perform mitigation as a condition of a variance~~
34 ~~approval.~~

35 Any applicant ~~who seeks approval to impact riparian buffers covered under this Rule who is required by Paragraph~~
36 ~~(a)~~ shall submit to the ~~Division~~ Authority a written mitigation proposal that calculates the required area of mitigation
37 and describes the area and location of each type of proposed mitigation. The applicant shall not impact buffers until

1 the ~~Division~~ Authority approves the mitigation plan and issues written ~~authorization.~~ approval. ~~For all options except~~
2 ~~payment of a fee under Paragraphs (j) or (k) of this Rule, the proposal shall include a commitment to provide:~~

- 3 (1) ~~— a perpetual conservation easement or similar legal protection mechanism to ensure perpetual~~
4 ~~stewardship that protects the mitigation site's nutrient removal and other water quality functions;~~
- 5 (2) ~~— a commitment to provide a non-wasting endowment or other financial mechanism for perpetual~~
6 ~~stewardship and protection; and~~
- 7 (3) ~~— a commitment to provide a completion bond that is payable to the Division sufficient to ensure that~~
8 ~~land or easement purchase, construction, monitoring, and maintenance are completed.~~

9 ~~For each mitigation site, the Division shall identify functional criteria to measure the anticipated benefits of the~~
10 ~~mitigation to the adjacent water. The Division shall issue a mitigation determination that specifies the area, type, and~~
11 ~~location of mitigation and the water quality benefits to be provided by the mitigation site. The mitigation~~
12 ~~determination issued according to this Rule shall be included as an attachment to the authorization certification. The~~
13 ~~applicant may propose any of the following types of mitigation and shall provide a written demonstration of~~
14 ~~practicality that takes into account the relative cost and availability of potential options, as well as information~~
15 ~~addressing all requirements associated with the option proposed:~~

- 16 (1) ~~— Applicant provided riparian buffer restoration or enhancement pursuant to Paragraph (i) of this~~
17 ~~Rule;~~
- 18 (2) ~~— Payment of a compensatory mitigation fee to a mitigation bank if buffer credits are available~~
19 ~~pursuant to Paragraph (j) of this Rule or payment of a compensatory mitigation fee to the Riparian~~
20 ~~Buffer Restoration Fund pursuant to Paragraph (k) of this Rule. Payment shall conform to the~~
21 ~~requirements of G.S. 143-214.20;~~
- 22 (3) ~~— Donation of real property or of an interest in real property pursuant to Paragraph (l) of this Rule; or~~
- 23 (4) ~~— Alternative buffer mitigation options pursuant to Paragraph (m) of this Rule.~~

24 (d) AREA OF IMPACT. The ~~authority~~ Authority shall determine the area of impact in square feet to each ~~zone~~ Zone
25 ~~as defined by the applicable [riparian buffer Rules] Rule .0233, .0243, .0250, .0259, .0267, or .0607 of this Subchapter~~
26 ~~of the proposed riparian buffer impact by adding the following:~~

- 27 (1) The area of the footprint of the use impacting the riparian buffer;
- 28 (2) The area of the boundary of any clearing and grading activities within the riparian buffer necessary
29 to accommodate the use; and
- 30 (3) The area of any ongoing maintenance corridors within the riparian buffer associated with the use.

31 The ~~authority~~ Authority shall deduct from this total the area of any wetlands that are subject to and compliant with
32 riparian wetland mitigation requirements under 15A NCAC 02H .0506 and are located within the proposed riparian
33 buffer impact area.

34 (e) AREA OF MITIGATION REQUIRED ON ZONAL MITIGATION RATIOS. The ~~authority~~ Authority shall
35 determine the required area of mitigation for each ~~zone~~ Zone by applying each of the following ratios to the area of
36 impact calculated under Paragraph (d) of this Rule:

Basin/Watershed	Zone 1 Ratio	Zone 2 Ratio
Neuse River Basin (15A NCAC 02B .0233)	3:1	1.5:1

Catawba River Basin (15A NCAC 02B .0243)	2:1	1.5:1
Randleman Lake Watershed (15A NCAC 02B .0250)	3:1	1.5:1
Tar-Pamlico River Basin (15A NCAC 02B .0259)	3:1	1.5:1
Jordan Lake Watershed (15A NCAC 02B .0267)	3:1	1.5:1
Goose Creek Watershed (15A NCAC 02B .0607)	3:1 ^A	

^A The Goose Creek Watershed does not have a Zone 1 and Zone 2. The mitigation ratio in the Goose Creek Watershed is 3:1 for the entire buffer.

(f) AREA OF MITIGATION REQUIRED ON LOCATIONAL MITIGATION RATIOS. The applicant or mitigation provider shall use the following locational ratios as applicable based on location of the proposed mitigation site relative to that of the proposed impact site. Locational ratios shall be as follows:

Location	Ratio
Within the 12-digit HUC ^A	0.75:1
Within the eight-digit HUC ^B	1:1
In the adjacent Outside of the eight-digit HUC ^{B,C} HUC ^B	2:1

^A Except within the Randleman Lake Watershed. Within the Randleman Lake Watershed the ratio is 1:1.

^B Except as provided in Paragraph (g) of this Rule.

^C ~~To use mitigation in the adjacent eight digit HUC, the applicant shall describe why buffer mitigation within the eight digit HUC is not practical for the project.~~

(g) GEOGRAPHIC RESTRICTIONS ON LOCATION OF MITIGATION. Mitigation shall be performed in the same river basin where the impact is located with the following additional specifications:

(1) In the following cases, mitigation shall be performed in the same watershed ~~in which where~~ the impact is located:

- (A) Falls Lake Watershed, as defined in Rule .0275 of this Section;
 - (B) Goose Creek Watershed, as defined in Rule .0601 of this Subchapter;
 - (C) Randleman Lake Water Supply Watershed, as defined in Rule .0248 of this Section;
 - (D) Each subwatershed of the Jordan Lake watershed, as defined in Rule .0262 of this Section;
- and
- (E) Other watersheds as specified in riparian buffer protection rules adopted by the Commission.

(2) Buffer mitigation for impacts within watersheds with riparian buffer rules that also have federally listed threatened or endangered aquatic species may be done within other watersheds with the same federally listed threatened or endangered aquatic species as long as the impacts are in the same river basin ~~and same Omernik Level III ecoregion~~ available at no cost at http://www.epa.gov/wed/pages/ecoregions/level_iii_iv.htm as the mitigation site.

(h) MITIGATION OPTIONS FOR APPLICANTS. The applicant may propose any of the following types of mitigation: ~~mitigation and shall provide a written demonstration of practicality that takes into account the relative cost and availability of potential options, as well as information addressing all requirements associated with the option proposed;~~

- (1) [Applicant provided riparian] Riparian buffer restoration or enhancement pursuant to Paragraph (n) of this Rule;
- (2) Payment of a compensatory mitigation fee to a compensatory buffer mitigation bank [if buffer credits are available] pursuant to Paragraph (i) of this Rule or payment of a compensatory mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph (j) of this Rule. Payment shall conform to the requirements of G.S. 143-214.20;
- (3) Donation of real property or of an interest in real property pursuant to Paragraph (k) of this Rule;
- (4) Alternative buffer mitigation [options] pursuant to Paragraph (o) of this Rule; or
- (5) Other buffer mitigation [options when] as approved by the Environmental Management Commission as a condition of a variance approval.

[Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer impact, and the remaining mitigation resulting from the application of the zonal mitigation ratios in Paragraph (e) and locational mitigation ratios in Paragraph (f) may be met through other mitigation options.]

(h) RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation units as follows:

Mitigation Activity	Square Feet of Mitigation Buffer	Riparian Buffer Mitigation Units Generated
Restoration	1	1
Enhancement	2	1
Preservation on Non-Subject Urban Streams	3	1
Preservation on Subject Urban Streams	3	1
Preservation on Non-Subject Rural Streams	5	1
Preservation on Subject Rural Streams	10	1

(i) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC COMPENSATORY BUFFER MITIGATION BANK. Applicants who choose to satisfy some or all of their mitigation by purchasing mitigation credits from a private or public compensatory buffer mitigation bank shall meet the following requirements:

- (1) The compensatory buffer mitigation bank from which credits are purchased shall have available riparian buffer credits approved by the Division;
- (2) The compensatory buffer mitigation bank from which credits are purchased shall be located as described in Paragraphs (e), (f), and (g) of this Rule; and
- (3) After receiving a mitigation acceptance letter from the compensatory buffer mitigation bank, proof of payment for the credits shall be provided to the Authority prior to any activity that results in the removal or degradation of the protected riparian buffer.

(j) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND. Applicants who choose to satisfy some or all of their mitigation requirement by paying a compensatory mitigation fee to the Riparian Buffer Restoration Fund shall meet the requirements of Rule .0269 of this Section. Payment made to the NC Division of Mitigation Services (DMS) [Ecosystem Enhancement Program (the Program)] shall be contingent upon acceptance of the payment by the DMS. [Program.] The DMS [Program] shall consider their financial, temporal, and technical ability to satisfy the mitigation request to determine whether they shall accept or deny the request.

1 (k) DONATION OF PROPERTY. Applicants who choose to satisfy their mitigation requirement by donating real
2 property or an interest in real property to fully or partially offset an approved payment into the Riparian Buffer
3 Restoration Fund pursuant to Paragraph (j) of this Rule shall do so in accordance with 15A NCAC 02R .0403.

4 (l) MITIGATION SITE REQUIREMENTS FOR APPLICANTS AND MITIGATION PROVIDERS. For each
5 mitigation site proposed by an applicant or mitigation provider under Paragraphs (n) or (o), the Authority shall identify
6 functional criteria to measure the anticipated benefits of the mitigation to the adjacent water. The Authority shall issue
7 a mitigation determination that specifies the area, type, and location of mitigation and the water quality benefits to be
8 provided by the mitigation site. All mitigation proposals shall meet the following criteria:

9 (1) The location of the buffer mitigation site shall comply with the requirements of Paragraphs ~~(e), (f),~~
10 (f) and (g) of this Rule. In the Catawba watershed, buffer mitigation may be done along the lake
11 shoreline as well as along intermittent and perennial stream channels throughout the watershed.

12 (2) The mitigation proposal shall include a commitment to provide:

13 (A) a perpetual conservation easement or similar preservation mechanism to ensure perpetual
14 stewardship that protects the mitigation site's nutrient removal and other water quality
15 functions;

16 (B) a non-wasting endowment or other dedicated financial surety to provide for the perpetual
17 land management and hydrological maintenance of lands ~~or~~ and maintenance of
18 structures as ~~appropriate;~~ applicable; ~~structures;~~ and

19 (C) financial assurance in the form of a completion bond, credit insurance, letter of credit,
20 escrow, or other vehicle acceptable to the Authority payable to, or for the benefit of, the
21 Authority in an amount sufficient to ensure that the property is secured in fee title or by
22 easement, and that planting or construction, monitoring and maintenance are completed as
23 necessary to meet success criteria as specified in the approved mitigation plan. This
24 financial assurance obligation shall not apply to the NC DMS. ~~Division of Mitigation~~
25 ~~Services.~~ ~~Ecosystem Enhancement Program.~~

26 (3) Diffuse flow of runoff shall be maintained in the riparian buffer. Any existing impervious cover or
27 stormwater conveyances such as ditches, pipes, or drain tiles shall be eliminated and the flow
28 converted to diffuse flow. If the applicant or mitigation provider determines that elimination of
29 existing stormwater conveyances is not feasible, then they shall include a justification and shall
30 provide a delineation of the watershed draining to the stormwater outfall and the percentage of the
31 total drainage by area treated by the riparian buffer with the mitigation plan specified in Paragraph
32 (n) or Paragraph (o) for Authority approval. During mitigation plan review and ~~approval~~ approval,
33 the ~~Division~~ Authority may reduce credit proportionally.

34 (4) Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in
35 Zone 1, that portion of the sewer easement within Zone 1 ~~is not~~ shall not be suitable for buffer
36 mitigation credit. If the proposed mitigation site contains a sewer easement in Zone 2, the portion
37 of the sewer easement in Zone 2 may be suitable for buffer mitigation credit if:

1 (A) the applicant or mitigation provider restores or enhances the forested buffer in Zone 1
2 adjacent to the sewer easement;

3 (B) the sewer easement is required to be maintained in a condition that meets the vegetative
4 requirements of the collection system permit; and

5 (C) diffuse flow is provided across the entire buffer width.

6 (5) The applicant or mitigation provider shall provide a site specific credit/debit ledger to the Authority
7 at regular intervals as specified in the mitigation plan approval or [Mitigation Banking Instrument]
8 mitigation banking instrument once credits are established and until they are exhausted.

9 ~~[(6) Projects that have been constructed and are within the required monitoring period on the effective~~
10 ~~date of this Rule are eligible for use as buffer mitigation sites. Projects that have completed~~
11 ~~monitoring and released by the Division on or before the effective date of this Rule are eligible for~~
12 ~~use as buffer mitigation for a period of 10 years from the effective date of this Rule.]~~

13 ~~(7)~~(6) Buffer mitigation credit, nutrient offset credit, wetland mitigation credit, and stream mitigation
14 credit shall be accounted for in accordance with the following:

15 (A) Buffer mitigation used for buffer mitigation credit shall not be used for nutrient offset
16 credits;

17 (B) Buffer mitigation credit shall not be generated within wetlands that provide wetland
18 mitigation credit required by 15A NCAC 02H .0506; and

19 (C) Buffer mitigation credit may be generated on stream mitigation sites as long as the width
20 of the restored or enhanced riparian buffer meets the requirements of Subparagraph (n)(1).

21 (m) RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation units
22 as follows:

<u>Mitigation Activity</u>	<u>Square Feet of Mitigation Buffer</u>	<u>Riparian Buffer Mitigation Units Generated</u>
<u>Restoration Site</u>	<u>1</u>	<u>1</u>
<u>Enhancement Site</u>	<u>2</u>	<u>1</u>
<u>Preservation Site on Non-Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation Site on Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation Site on Non-Subject Rural Streams</u>	<u>5</u>	<u>1</u>
<u>Preservation Site on Subject Rural Streams</u>	<u>10</u>	<u>1</u>

23
24 ~~(n)~~(n) RIPARIAN BUFFER RESTORATION SITE OR ENHANCEMENT SITE, ENHANCEMENT. Division
25 Authority staff shall make an on-site determination as to whether a potential mitigation site qualifies as a restoration
26 site or enhancement site as defined in Paragraph (b) of this Rule. Riparian buffer restoration sites or enhancement
27 sites shall meet the following requirements:

28 (1) Buffer restoration sites or enhancement sites may be proposed as follows:

<u>Urban Areas</u>		<u>Non Urban Areas</u>	
<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>	<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>
<u>Less than 20</u>	<u>0 %</u>	<u>Less than 20</u>	<u>0 %</u>

20-29	75 %	20-29	0 %
30-100	100 %	30-100	100 %
101-200 ^A 101-200	50 % ^A 33%	101-200 ^A	50 % ^A

^A—The area of the [buffer] mitigation site beyond 100 linear feet from the top of bank shall comprise no more than 10 percent of the total area of [buffer] mitigation.

- (2) — The location of the restoration or enhancement shall comply with the requirements of Paragraphs (e), (f), and (g) of this Rule. In the Catawba watershed, buffer mitigation may be done along the lake shoreline as well as along intermittent and perennial stream channels throughout the watershed.
- (3) — Diffuse flow of runoff shall be maintained in the riparian buffer. Any existing impervious cover or stormwater conveyances such as ditches, pipes, or drain tiles shall be eliminated and the flow converted to diffuse flow. If elimination of existing stormwater conveyances is not feasible, then the applicant or mitigation provider shall provide a delineation of the watershed draining to the stormwater outfall and the percentage of the total drainage treated by the riparian buffer for Division approval; the Division may reduce credit proportionally.
- (4)(2) The applicant or mitigation provider shall submit ~~to the Authority~~ a restoration or enhancement mitigation plan ~~to the Authority~~ for written ~~approval~~ approval by the Division. The ~~restoration or enhancement~~ plan shall demonstrate compliance with the requirements of Subparagraphs ~~(1) through (3)~~ of this Paragraph and Paragraphs (l) and (m) of this Rule and shall also contain the following: following in addition to the elements required in Paragraph (e) of this Rule:
- (A) A map of the proposed restoration or enhancement site;
 - (B) A vegetation plan that shall detail the activities proposed to ensure a final performance standard of 260 stems per acre at the completion of monitoring. The final performance standard shall include a minimum of four native hardwood tree species or four native hardwood tree and native shrub species, where no one species is greater than 50 percent of stems. established stems, established [planted] at a density sufficient to provide 260 stems per acre at the completion of monitoring. Native hardwood and native shrub volunteer species may be included to meet the final performance standards. standard of 260 stems per acre. The Division Authority may approve alternative vegetation plans upon consideration of factors, including site wetness and plant availability to meet the requirements of this Part;
 - (C) A grading plan (if applicable). The site shall be graded in a manner to ensure diffuse flow through the entire riparian buffer;
 - (D) A schedule for implementation, including a fertilization and herbicide plan if applicable; and
 - (E) A monitoring plan plan, including monitoring of vegetative success to document whether the site is expected to meet the final performance standards as defined in Part (n)(2)(B) and other anticipated benefits to the adjacent water water, as listed in the authorization

certification. The plan shall include a proposed schedule and method for monitoring the vegetative status of the restoration or enhancement site for five years, including the health and average stem densities of native hardwood tree or tree and shrub species that are to be counted toward the final performance standard.

(5)(3) Within one year after the Division has approved the restoration or enhancement Authority approval of the mitigation plan, the applicant or mitigation provider shall present documentation to the Division Authority that the riparian buffer has been restored or enhanced unless the Division applicant or mitigation provider requests, and the Authority agrees in writing, writing prior to that [date] date, to a longer time period, period due to the necessity for a longer construction period.

(6) The mitigation area shall be placed under a perpetual conservation easement or similar legal protection mechanism to provide for protection of the property's nutrient removal and other water quality functions.

(7)(4) The applicant or mitigation provider shall submit written annual reports reports, unless an alternative schedule has been approved by the Authority during the mitigation plan approval, for a period of five years after completion of the activities identified in Part (n)(2)(B) at the restoration site or enhancement site has been conducted showing showing:

(A) that [the survival of] the trees or tree and shrub species planted; compliance with the monitoring plan approved pursuant to Part (n)(2)(E) of this Rule; and

[(B) whether the vegetation of the site is expected to meet] are meeting success criteria; and

[(C)](B) that diffuse flow through the riparian buffer has been maintained.

The If the Authority determines that the native hardwood tree or tree and shrub species at the site are not expected to meet the final performance standards listed in Part (n)(2)(B), then the Authority may require that the applicant or mitigation provider shall replace trees or trees and shrubs and restore diffuse flow if as needed during that five-year period. If the Authority determines that diffuse flow through the buffer is not being maintained, then the Authority may require that the applicant or mitigation provider restore diffuse flow. If the Authority determines that the [objectives] final performance standards listed in Part (n)(2)(B) [identified in this Paragraph] have not been achieved at the end of the five-year monitoring [period] period, the Authority may require additional Additional years of monitoring. The Authority shall make determinations referenced in this Subparagraph on a site specific basis based on the annual reports, any supplemental information submitted by the applicant or mitigation provider, or a site evaluation by the Authority. monitoring may be required if the objectives under Paragraph (i) have not been achieved at the end of the five year monitoring period.

(8) The mitigation provider shall provide a site specific credit/debit ledger to the Division at regular intervals once credits are established and until they are exhausted.

(9) The mitigation provider shall provide a completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring, and maintenance are completed. A non-

1 wasting endowment or other financial mechanism for perpetual maintenance and protection shall be
2 provided.

3 ~~(j) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC MITIGATION BANK.~~

4 Applicants who choose to satisfy some or all of their mitigation by purchasing mitigation credits from a private or
5 public mitigation bank shall meet the following requirements:

6 (1) ~~— The mitigation bank from which credits are purchased is listed on the Division's webpage
7 (<http://portal.ncdenr.org/web/wq/swp/ws/401>) and has available riparian buffer credits;~~

8 (2) ~~— The mitigation bank from which credits are purchased shall be located as described in Paragraphs
9 (e), (f), and (g) of this Rule; and~~

10 (3) ~~— After receiving a mitigation acceptance letter from the mitigation provider, proof of payment for the
11 credits shall be provided to the Division prior to any activity that results in the removal or
12 degradation of the protected riparian buffer.~~

13 ~~(k) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND.~~ Applicants who choose to satisfy some or
14 all of their mitigation determination by paying a compensatory mitigation fee to the Riparian Buffer Restoration Fund
15 shall meet the requirements of Rule .0269 of this Section. Payment made to the NC Ecosystem Enhancement Program
16 (the Program) shall be contingent upon acceptance of the payment by the Program. The Program shall consider their
17 financial, temporal, and technical ability to satisfy the mitigation request to determine whether they shall accept or
18 deny the request.

19 ~~(l) DONATION OF PROPERTY.~~ Applicants who choose to satisfy their mitigation determination by donating real
20 property or an interest in real property to fully or partially offset an approved payment into the Riparian Buffer
21 Restoration Fund pursuant to Paragraph (k) of this Rule shall meet the following requirements:

22 (1) ~~— The value of the property interest shall be determined by an appraisal performed in accordance with
23 Part (1)(4)(D) of this Rule. The donation shall satisfy the mitigation determination if the appraised
24 value of the donated property interest is equal to or greater than the required fee. If the appraised
25 value of the donated property interest is less than the required fee calculated pursuant to Rule .0269
26 of this Section, the applicant shall pay the remaining balance due.~~

27 (2) ~~— The donation of real property interests shall be granted in perpetuity.~~

28 (3) ~~— Donation of real property interests to satisfy the full or partial payments under Paragraph (k) shall
29 be accepted only if such property meets the following requirements:~~

30 (A) ~~— The property shall be suitable for restoration or enhancement to successfully produce
31 viable riparian buffer compensatory mitigation credits in accordance with Paragraph (i) of
32 this Rule or the property shall be suitable for preservation to successfully produce viable
33 riparian buffer compensatory mitigation credits in accordance with Part (m)(2)(C) of this
34 Rule;~~

35 (B) ~~— The property shall be located in an area where the Program may reasonably utilize the
36 credits, based on historical or projected use, to offset compensatory mitigation
37 requirements;~~

- 1 ~~(C) — The estimated cost of restoring or enhancing and maintaining the property shall not exceed~~
2 ~~the projected mitigation credit value of the property minus land acquisition costs, except~~
3 ~~where the applicant supplies additional funds acceptable to the Program for restoration or~~
4 ~~enhancement and maintenance of the buffer;~~
- 5 ~~(D) — The property shall not contain any building, structure, object, site, or district that is listed~~
6 ~~in the National Register of Historic Places established pursuant to Public Law 89-665, 16~~
7 ~~U.S.C. 470 as amended;~~
- 8 ~~(E) — The property shall not contain any hazardous substance or solid waste such that water~~
9 ~~quality may be adversely impacted, unless the hazardous substance or solid waste can be~~
10 ~~properly remediated before the interest is transferred;~~
- 11 ~~(F) — The property shall not contain structures or materials that present health or safety concerns~~
12 ~~to the general public. If wells, septic, water, or sewer connections exist, they shall be filled,~~
13 ~~remediated or closed at owner's expense in accordance with state and local health and~~
14 ~~safety regulations before the interest is transferred. Sewer connections in Zone 2 may be~~
15 ~~allowed for projects in accordance with Part (m)(2)(E) of this Rule;~~
- 16 ~~(G) — The property and adjacent properties shall not have prior, current, or known future land use~~
17 ~~that may jeopardize the functions of the compensatory mitigation;~~
- 18 ~~(H) — The property shall not have any encumbrances or conditions that are inconsistent with the~~
19 ~~requirements of this Rule or purposes of Rules .0233, .0243, .0250, .0259, .0267 or .0607~~
20 ~~of this Subchapter;~~
- 21 ~~(I) — Fee simple title to the property or a perpetual conservation easement on the property shall~~
22 ~~be donated to the State of North Carolina, a local government, or a qualified holder under~~
23 ~~N.C. General Statute 121-34 et seq. and 26 USC 170(h) of the Internal Revenue Code as~~
24 ~~approved by the Department and the donee; and~~
- 25 ~~(J) — The donation shall be accompanied by a non-wasting endowment or other financial~~
26 ~~mechanism for perpetual maintenance and protection sufficient to ensure perpetual long-~~
27 ~~term monitoring and maintenance. However, when a local government has donated a~~
28 ~~perpetual conservation easement and entered into a binding intergovernmental agreement~~
29 ~~with the Program to manage and protect the property consistent with the terms of the~~
30 ~~perpetual conservation easement, that local government shall not be required to provide a~~
31 ~~non-wasting endowment.~~
- 32 ~~(4) — At the expense of the applicant or donor, the following information shall be submitted to the~~
33 ~~Program with any proposal for donations or dedications of interest in real property:~~
- 34 ~~(A) — Documentation that the property meets the requirements of Subparagraph (l)(3) of this~~
35 ~~Rule;~~
- 36 ~~(B) — A US Geological Survey 1:24,000 (7.5 minute) scale topographic map, county tax map,~~
37 ~~USDA Natural Resource Conservation Service County Soil Survey Map, and county road~~

1 map showing the location of the property to be donated, along with information on existing
2 site conditions, vegetation types, presence of existing structures, and easements;

3 (C) — A current property survey performed in accordance with the procedures of the North
4 Carolina Department of Administration, State Property Office as identified by the State
5 Board of Registration for Professional Engineers and Land Surveyors as set forth in 21
6 NCAC 56 .1600.

7 (D) — A current appraisal of the value of the property performed in accordance with the
8 procedures of the North Carolina Department of Administration, State Property Office as
9 identified by the Appraisal Board as set forth in 21 NCAC 57A .0501; and

10 (E) — A complete attorney's report on title with a title commitment for policy in the name of the
11 State of North Carolina in the dollar amount of the appraised value.

12 (m)(o) ALTERNATIVE BUFFER MITIGATION OPTIONS. Some or all of a buffer mitigation requirement may
13 be met through any of the alternative mitigation options described in this Paragraph. Alternative buffer mitigation
14 options are detailed [below.] in this Paragraph. Any proposal for alternative buffer mitigation shall be provided in
15 writing to the Division, shall meet the content and procedural requirements for approval by the Division, [and] shall
16 meet the requirements of set out in Paragraphs (e), (e), (f), (l) and (g)(m) of this Rule, Rule and the requirements set
17 out in the named Subparagraph [below] of this Paragraph addressing that applicable alternative buffer mitigation
18 option; option, and the following requirements:

19 (1) Retroactive Credit. Alternative buffer mitigation sites constructed and within the required
20 monitoring period on the effective date of this Rule shall be eligible for use as alternative buffer
21 mitigation sites. Alternative buffer mitigation sites that have completed monitoring and were
22 released by the Division on or within the past ten years of the effective date of this Rule shall be
23 eligible for use as alternative buffer mitigation sites. All alternative buffer mitigation site proposals
24 submitted under this Subparagraph shall meet the following:

25 (A) A map or maps of the proposed alternative buffer mitigation site;

26 (B) Documentation of pre-existing conditions showing that the proposed alternative buffer
27 mitigation site met the criteria to qualify for the applicable alternative buffer mitigation
28 type identified in the applicable Subparagraph [below:] of this Paragraph;

29 (C) Documentation of the activities that were conducted at the proposed alternative buffer
30 mitigation site to meet success criteria identified in the applicable Subparagraph [below:]
31 of this Paragraph; and

32 (D) Documentation that the proposed alternative buffer mitigation site met the success criteria
33 identified in the applicable Subparagraph [below:] of this Paragraph.

34 These alternative buffer mitigation sites shall receive credit in accordance with the criteria set forth
35 in Paragraph (m) and Subparagraph (n)(1).

36 (1) — Any proposal for alternative mitigation shall be provided in writing to the Division and shall meet
37 the following content and procedural requirements for approval by the Division:

1 (A) ~~Projects that have been constructed and are within the required monitoring period on the~~
2 ~~effective date of this Rule are eligible for use as alternative buffer mitigation. Projects that~~
3 ~~have completed monitoring and released by the Division on or before the effective date of~~
4 ~~this Rule are eligible for use as alternative buffer mitigation for a period of 10 years from~~
5 ~~the effective date of this Rule;~~

6 (B) ~~The mitigation area shall be placed under a perpetual conservation easement or similar~~
7 ~~legal protection mechanism to provide for protection of the property's nutrient removal and~~
8 ~~other water quality functions; and~~

9 (C) ~~A completion bond payable to the Division sufficient to ensure that land purchase,~~
10 ~~construction, monitoring, and maintenance are completed.~~

11 (D) ~~A non-wasting endowment or other financial mechanism for perpetual maintenance and~~
12 ~~protection shall be provided.~~

13 (2) ~~ALTERNATIVE BUFFER MITIGATION – NON-STRUCTURAL, VEGETATIVE OPTIONS~~

14 (A) ~~(1)(2)~~ Coastal Headwater Stream Mitigation. Wooded buffers planted along Outer Coastal Plain
15 headwater stream mitigation sites may also be approved as riparian buffer mitigation credit as long
16 as if the site meets all applicable requirements of Paragraph ~~(1)(n)~~ of this Rule. In addition, all
17 success criteria ~~including woody species, stem density, diffuse flow, and stream success criteria~~
18 ~~specified in the approval of the stream mitigation site~~ by the Division ~~in any required written~~
19 ~~approval of the site~~ shall be met. The area of the buffer shall be measured perpendicular to the length
20 of the valley being restored. The area within the proposed buffer mitigation site shall not also be
21 used as wetland mitigation. The [applicant] or mitigation provider shall monitor the site for at least
22 five years from the date of planting by providing [and provide] annual reports for written Division
23 approval.

24 (B) ~~(2)(3)~~ Buffer Restoration and Enhancement on Non-Subject Streams. Restoration or
25 enhancement of buffers may be conducted on intermittent or perennial streams that are not subject
26 to the applicable riparian buffer rules [Rules] Rule .0233, .0243, .0250, .0259, .0267, or .0607 of
27 this Subchapter. These streams shall be confirmed as intermittent or perennial streams by Division
28 staff certified per G.S. 143-214.25A using the Division publication, Methodology “Methodology
29 for Identification of Intermittent and Perennial Streams and Their Origins (v.4.11, 2010) (v.4.11,
30 2010)” available at no cost at
31 <http://portal.ncdenr.org/web/wq/swp/ws/401/waterresources/streamdeterminations>. The proposal
32 shall meet all applicable requirements of Paragraph ~~(1)(n)~~ of this Rule.

33 (C) ~~(3)(4)~~ Preservation of Buffer on Non-subject streams. Preservation of buffers on intermittent or
34 perennial streams that are not subject to the applicable riparian buffer rules [Rules] Rule .0233,
35 .0243, .0250, .0259, .0267, or .0607 of this Subchapter may be proposed in order to permanently
36 protect the buffer from cutting, clearing, filling, grading, and similar activities that would affect the
37 functioning of the buffer. These streams shall be confirmed as intermittent or perennial streams by

1 Division staff certified per G.S. 143-214.25A using the Division publication, Methodology
2 “Methodology for Identification of Intermittent and Perennial Streams and Their Origins (v.4.11,
3 2010); (v4.11, 2010).” The preservation site shall meet the requirements of Subparagraph (n)(1)
4 and the requirements set forth in 15A NCAC 02R .0403(c)(7), (8), and (11). Subparagraphs (i)(1),
5 (i)(3), (i)(6) and Parts (1)(3)(D), (E), (F), (H) and (J) of this Rule. Preservation shall be proposed
6 only when restoration or enhancement with an area at least equal to the footprint of the buffer impact
7 has been proposed. The area of preservation credit within a buffer mitigation site shall comprise of
8 no more than 25 percent of the total area of buffer mitigation.

9 ~~(D)~~ (4)(5) Preservation of Buffers on Subject Streams. Buffer preservation may be proposed on
10 streams that are subject to the applicable [riparian buffer] [Rules] Rule .0233, .0243, .0250, .0259,
11 .0267, or .0607 of this Subchapter in order to permanently protect the buffer from cutting, clearing,
12 filling, grading, and similar activities that would affect the functioning of the buffer beyond the
13 protection afforded by the existing buffer rules on sites that meet the definition of a preservation
14 site. site along streams, estuaries, or ponds that are subject to buffer rules. The preservation site
15 shall meet the requirements of Subparagraph (n)(1) and the requirements set forth in 15A NCAC
16 02R .0403(c)(7), (8), and (11). Subparagraphs (i)(1), (i)(3), (i)(6) and Parts (1)(3)(D), (E), (F), (H)
17 and (J) of this Rule. Preservation shall be proposed only when restoration or enhancement of an
18 area at least equal to the footprint of the buffer impact has been proposed. The area of preservation
19 credit within a buffer mitigation site shall comprise of no more than 25 percent of the total area of
20 buffer mitigation.

21 ~~(E)~~ — Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in
22 Zone 1, that portion of the sewer easement within Zone 1 is not suitable for buffer mitigation. If the
23 proposed mitigation site contains a sewer easement in Zone 2, the portion of the sewer easement in
24 Zone 2 may be suitable for buffer mitigation if:

- 25 (i) — the applicant or mitigation provider restores or enhances the forested buffer in
26 Zone 1 adjacent to the sewer easement;
- 27 (ii) — the sewer easement is at least 30 feet wide;
- 28 (iii) — the sewer easement is required to be maintained in a condition that meets the
29 vegetative requirements of the collection system permit; and
- 30 (iv) — diffuse flow is provided across the entire buffer width.

31 The proposal shall meet all applicable requirements of Paragraph (i) of this Rule for
32 restoration or enhancement. The proposal shall meet all applicable requirements of Part
33 (m)(2)(C) of this Rule for preservation.

34 ~~(F)~~ (5)(6) Enhancement of grazing areas adjacent to streams. Buffer credit at a 2:1 ratio shall be
35 available for an applicant or mitigation provider who proposes permanent exclusion of grazing
36 livestock that otherwise degrade the stream and riparian zone through trampling, grazing, or waste
37 deposition by fencing the livestock out of the stream and its adjacent buffer. The applicant or

1 mitigation provider shall provide an enhancement plan as set forth in Paragraph ~~(i)~~(n). The
2 applicant or mitigation provider shall demonstrate that grazing was the predominant land use since
3 the effective date of the applicable buffer rule.

4 ~~(G)~~(6)(7) Mitigation on ephemeral channels. For purposes of riparian buffer mitigation as described
5 in this Part, an "ephemeral channel" is defined as a natural channel exhibiting discernible banks
6 within a topographic crenulation (V-shaped contour lines) indicative of natural drainage on the
7 1:24,000 scale (7.5 minute) quadrangle topographic map prepared by the U.S. Geologic Survey, or
8 as seen on digital elevation models with contours developed from the most recent available LiDAR
9 ~~data.~~ [data] data, available at no cost at <http://www.ncfloodmaps.com/lidar.com>. Ephemeral
10 channels only flow for a short period of time after precipitation in the immediate drainage area and
11 do not have periods of base flow sustained by groundwater discharge. The applicant or mitigation
12 provider shall provide a delineation of the watershed draining to the ephemeral channel. The entire
13 area proposed for mitigation shall be within the contributing drainage area to the ephemeral channel.
14 The ephemeral channel shall be directly connected to an intermittent or perennial stream and
15 contiguous with the rest of the mitigation site protected under a perpetual conservation easement.
16 The area of the mitigation site on ephemeral channels shall comprise no more than 25 percent of the
17 total area of buffer mitigation. The proposal shall meet all applicable requirements of Paragraph
18 ~~(i)~~(n) of this Rule for restoration or enhancement. The proposal shall meet all applicable
19 requirements of Subparagraph Part ~~(m)~~(2)(C) ~~(o)~~(3)(4) or ~~(o)~~(4)(5) of this Rule for preservation.

20 ~~(H)~~(7)(8) Restoration and Enhancement on Ditches. For purposes of riparian buffer mitigation as
21 described in this Part, a "ditch" is defined as a man-made channel other than a modified natural
22 stream that was constructed for drainage purposes. To be used for mitigation, a ditch shall meet all
23 of the following criteria:

- 24 ~~(i)~~(A) be directly connected with and draining towards an intermittent or perennial stream;
- 25 ~~(ii)~~(B) be contiguous with the rest of the mitigation site protected under a perpetual conservation
26 easement;
- 27 ~~(iii)~~(C) stormwater runoff from overland flow shall drain towards the ditch;
- 28 ~~(iv)~~(D) be between one and three feet in depth; and
- 29 ~~(v)~~(E) the entire length of the ditch shall have been in place prior to the effective date of the
30 applicable buffer rule.

31 The width of the restored or enhanced area shall not be less than 30 feet and shall not exceed 50 feet
32 for crediting purposes. The applicant or mitigation provider shall provide a delineation of the
33 watershed draining to the ditch. The watershed draining to the ditch shall be at least four times
34 larger than the restored or enhanced area along the ditch. The perpetual conservation easement shall
35 include the ditch and the confluence of the ditch with the intermittent or perennial stream, and
36 provide language that prohibits future maintenance of the ditch. The proposal shall meet all
37 applicable requirements of Paragraph ~~(i)~~(n) of this Rule for restoration or enhancement.

1 ~~(3)~~(8)(9) ~~ALTERNATIVE BUFFER STORMWATER TREATMENT OPTIONS~~ Stormwater

2 Treatment Options. All stormwater treatment options shall meet the following requirements:

3 (A) ~~For all structural options: Riparian buffer restoration or enhancement is required with an~~
4 ~~area at least equal to the footprint of the buffer impact, and the remaining mitigation~~
5 ~~resulting from the multipliers may be met through structural options;~~

6 (B)(A) Structural ~~measures~~ options already required by other local, state, or federal rule or
7 permit cannot be used as alternative buffer ~~mitigation~~, mitigation credit, except to the
8 extent such measure(s) exceed the requirements of such rule or permit. Stormwater Best
9 Management Practices (BMPs), including bioretention facilities, constructed wetlands,
10 infiltration devices and sand filter filters are all potentially approvable ~~(BMPs)~~ BMPs by
11 the Division for alternative buffer ~~mitigation~~, mitigation credit. Other BMPs may be
12 approved only if they meet the nutrient removal levels outlined in Part ~~(3)(C)~~ (8)(o)(9)(B),
13 (9)(B) of this Subparagraph. Existing or planned BMPs for a local, state, or federal rule
14 or permit may be retrofitted or expanded to improve their nutrient removal if this level of
15 treatment ~~would~~ is not ~~be~~ required by other local, state, or federal rules. In this case, the
16 predicted increase in nutrient removal may be counted toward alternative buffer ~~mitigation~~;
17 mitigation credit;

18 (C)(B) Minimum treatment levels: Any structural BMP shall provide at least 30 percent total
19 nitrogen and 35 percent total phosphorus removal as demonstrated by a scientific and
20 engineering literature review as approved by the Division. The mitigation proposal shall
21 demonstrate that the proposed alternative removes an equal or greater annual mass load of
22 nutrients to surface waters as the buffer impact authorized in the authorization certificate
23 or variance, following the calculation of impact and mitigation areas pursuant to
24 Paragraphs (d), (e), and (f) of this Rule. To estimate the rate of nutrient removal of the
25 impacted buffer, the applicant or mitigation provider ~~shall~~ may use the ~~[NC]~~ “NC Division
26 of Water Quality – Methodology and Calculation for determining nutrient reductions
27 associated with Riparian Buffer [Establishment] Establishment” available at no cost at
28 [http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-](http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-47f890d9329a&groupId=38364)
29 [47f890d9329a&groupId=38364](http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-47f890d9329a&groupId=38364), ~~a method previously approved by the Division~~. The
30 applicant or mitigation provider may propose an alternative method of estimating the rate
31 of nutrient removal for consideration and review by the Division;

32 (D)(C) All proposed structural BMPs shall follow the Division's ~~2009~~ “2009 Stormwater Best
33 Management Practice Design Manual Manual” available at no cost at
34 <http://portal.ncdenr.org/web/lr/bmp-manual>. If a specific proposed structural BMP is not
35 addressed in this Manual, the applicant or mitigation provider shall follow Chapter 20 in
36 this Manual for approval;

1 ~~(E)~~(D) All structural options are required to have Division approved operation and maintenance
2 plans;

3 ~~(F)~~(E) All structural options are required to have continuous and perpetual maintenance and shall
4 follow the Division's ~~2009~~ "2009 Stormwater Best Management Practice Design Manual;
5 Manual":

6 ~~(G)~~(F) Upon completion of construction, the designer for the type of BMP installed shall certify
7 that the system was inspected during construction and that the BMP was constructed in
8 substantial conformity with plans and specifications approved by the Division;

9 ~~(H)~~(G) Removal and replacement of structural options: If a structural option is proposed to be
10 removed and cannot be replaced on-site, then a structural or non-structural measure of
11 equal or better nutrient removal capacity capacity, as determined by calculations submitted
12 to and approved by the Division, in a location as specified by Paragraph Paragraphs (f) and
13 (g) of this Rule shall be constructed as a replacement;

14 ~~(I)~~(H) Renovation or repair of structural options: If the applicant, mitigation provider, or Division
15 determines that a structural option must be renovated or repaired, it shall be renovated to
16 provide equal or better nutrient removal capacity than as originally designed; and

17 ~~(J)~~(I) Structural options options, as well as their operation and maintenance maintenance, are the
18 responsibility of the landowner or easement holder unless the Division gives written
19 approval for another responsible party to operate and maintain them. Structural options
20 shall be located in recorded drainage easements for the purposes of operation and
21 maintenance and shall have recorded access easements to the nearest public right-of-way.
22 These easements shall be granted in favor of the party responsible for operating and
23 maintaining the structure, with a note that operation and maintenance is the responsibility
24 of the landowner, easement holder holder, or other responsible party. party; and

25 ~~(K) — Bonding and endowment. A completion bond payable to the Division sufficient to ensure
26 that land purchase, construction, monitoring, and maintenance are completed and a non-
27 wasting endowment or other financial mechanism for perpetual maintenance and
28 protection shall be provided.~~

29 ~~(4)(9)(10) [CASE BY CASE] APPROVAL FOR OTHER ALTERNATIVE BUFFER
30 MITIGATION OPTIONS. Approval for other alternative buffer mitigation options. Other
31 alternative riparian buffer mitigation options [that have] not [been] specified within this Rule may
32 be considered by submitted to the Division for review and recommendation to the Environmental
33 Management Commission on a case-by-case basis. basis [as long as the options otherwise meet the
34 requirements of this Rule.] Any proposal submitted under this [paragraph] Paragraph shall provide
35 documentation or calculations to demonstrate that the proposed alternative mitigation option
36 removes an equal or greater annual mass load of nutrients to surface waters as a riparian buffer.
37 [Prior] Upon completion of the Division's review, and prior to recommendation to the~~

1 Environmental Management ~~[Commission]~~ Commission, the Division shall issue a ~~after~~ 30-
2 ~~calendar~~ day public notice through the Division's ~~Water Quality Certification Mailing List in~~
3 ~~accordance with 15A NCAC 02H .0503~~ website and the DWRwetlands [Listserve]-Listserve, as
4 long as the options otherwise meet the requirements of this Rule. Division staff shall present their
5 ~~recommendations~~ recommendations, including comments received during the public notice ~~[period]~~
6 period, to the Environmental Management Commission for a final decision, ~~decision with respect~~
7 ~~to any proposal for [other] alternative buffer mitigation options not specified [described] in this~~
8 ~~Rule. If approved by the Environmental Management Commission, the alternative buffer mitigation~~
9 option may be proposed by other applicants and mitigation providers.

10 ~~(n) ACCOUNTING FOR BUFFER CREDIT, NUTRIENT OFFSET CREDIT AND STREAM MITIGATION~~
11 ~~CREDIT. Buffer mitigation credit, nutrient offset credit, wetland mitigation credit, and stream mitigation credit shall~~
12 ~~be accounted for in accordance with the following:~~

- 13 (1) ~~Buffer mitigation used for buffer mitigation credit shall not be used for nutrient offset credits;~~
14 (2) ~~Buffer mitigation or nutrient offset credit shall not be generated within wetlands that provide~~
15 ~~wetland mitigation credit required by 15A NCAC 02H .0506; and~~
16 (3) ~~Either buffer mitigation or nutrient offset credit may be generated on stream mitigation sites as long~~
17 ~~as the width of the restored or enhanced riparian buffer meets the requirements of Subparagraph~~
18 ~~(i)(1).~~

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation -

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *"that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule."*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State's Division of Mitigation Services. No matter one's opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State's benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen. It is important to note a vast majority of the retroactive credit to be generated by the State would come from projects constructed to satisfy stream mitigation under the state's in-lieu fee program and not riparian buffers, two very different regulated natural resources.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note's detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

August 19, 2015

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission ("RRC") on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation –

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this

setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public. Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule: In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *"that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule."*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State's Division of Mitigation Services. No matter one's opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State's benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen. It is important to note a vast majority of the retroactive credit to be generated by the State would come from projects constructed to satisfy stream mitigation under the state's in-lieu fee program and not riparian buffers, two very different regulated natural resources.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note's detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Subject: 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule)
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation -

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Subject: 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule)
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

**A Substantive change to Retroactive Credit Generation -
Background:**

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

George Howard

Subject: 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule)
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation -

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects “*that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.*”

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

John Preyer

Subject: 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule)
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation -

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

Tiffani Bylow

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

FILED
2015 AUG 17 AM 11:19
OFFICE OF ADMIN HEARINGS

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to expand retroactive credit generation from alternative mitigation use (enhancement/preservation) to all types of mitigation (restoration). My concerns with the CMB rule are outlined below.

A Substantive change to Retroactive Credit Generation:

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina. The mitigation component of the rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted. In the case of retroactive credit generation, credits would be generated from buffers that are already in existence and protected, not adding any new buffer when existing buffers are impacted. This should be considered “double dipping” plain and simple. There is also no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality

improvements or any discernible benefit to the public. As a previous employee and planning supervisor of the NC Ecosystem Program, which is now Division of Mitigation Services, I am adamantly opposed to retroactive credit generation.

Issue at hand - Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options which were not available to applicants or mitigation providers under the original six rules. The new alternative methods were developed to insure the consolidated Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

The Addendum 1 to Fiscal Note Analysis, dated May 14, 2013, identified a \$3.4 million, one-time benefit as a result of retroactive credit generation.

In the version of the Rule presented to the EMC on July 9th 2015, retroactive credit generation is now available for all types of mitigation, including traditional restoration and enhancement. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014, Stakeholder Report is substantively very different. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, goes into great detail about effects of retroactive credit generation. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. This represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help protect and improve water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and tourism.

For nearly two pages, the Second Addendum to the Fiscal Note details the effect the altered text regarding retroactive credit generation would have on the environment. Furthermore, it is important to note a vast majority of the retroactive credit to be generated by the State would come from projects constructed to satisfy stream mitigation under the state’s in-lieu fee program.

Furthermore, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period which lasted from February 17, 2015 thru April 17, 2015. This Second Addendum represents a substantial substantive change to the CBM for which the public was not allowed to review and make comment. The substantive change also means the CBM rule is no longer substantively identical to the April 10, 2014 Stakeholder Report.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

Bonnie M. Duncan

Subject: 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule)
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CMB rule”). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission (“RRC”) on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation - Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen.

Conclusion

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

Raymond Holz

August 14, 2015

Subject: Letter of Opposition Consolidated Buffer Mitigation Rule

I am writing on behalf of the North Carolina Wildlife Federation to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule, CMB).

NCWF is a statewide conservation organization formed in 1945 and dedicated to the protection, conservation and restoration of North Carolina wildlife and habitat. Our vision is for a collective stewardship that will result in a North Carolina with bountiful and diverse wildlife, including all species of wild flora and fauna, that is valued by its citizens and elected officials, and sustainably managed for future generations. On behalf of our tens of thousands of outdoor enthusiasts and wildlife conservation members, supporters and chapter and affiliate constituents we offer these comments.

NCWF requests that the CMB Rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. We further request that the rule be subject to a delayed effective date as set out in that same provision.

The temporary CMB rule, which became effective on October 24, 2014, was substantially amended in July 2015 to expand retroactive credit generation from alternative mitigation use (enhancement/preservation) to all types of mitigation. The new alternative methods were developed to insure the consolidated rule was meeting resource conservation objectives effectively.

The Riparian Buffer Rule was developed to protect water quality in the nutrient sensitive waters of North Carolina. The purpose of the mitigation component of the rule is to offset new impacts to extant buffers with new buffers that offset the impacted buffers. As a result there is likely a net wildlife and water quality improvement within the watershed. In the case of retroactive credit generation, credits would be generated from buffers that are already in existence and protected, thus adding no new buffers and no additional resource conservation.

Allowance of retroactive credits for all types of mitigation, rather than for alternative mitigation options not available to providers in 2013, will be disruptive to private businesses engaged in providing mitigation services. Such disruption will likely lead to a reduction in future mitigation projects, thus impacting the conservation of those resources the rule for which the rule was developed.

Thank you for considering these comments.

Tim Gestwicki
Chief Executive Officer

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission ("RRC") on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to allow for restoration based mitigation to retroactively generate off-set credits. Previously, the Rule only allowed for alternative mitigation (enhancement, preservation, stormwater BMPs, etc.) to generate credit retroactively. This is a substantive change to the rule and directly contradicts S.L. 2014-95. My concerns with the CMB rule are further detailed below.

A Substantive change to Retroactive Credit Generation -

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina and retroactive credit generation fundamentally erodes that goal. The mitigation component of the Rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted.

In the case of retroactive credit generation within the 2015 CMB rule, under review by the RRC, credits would be generated from buffers that already exist and are protected in perpetuated with conservation easements. This scenario would result in no additional buffer being created when existing buffers are impacted. Under this setting, there is no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public.

Issue at Hand: Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options, i.e. enhancement, preservation, and stormwater BMPs, which were not available to applicants or mitigation providers under the original six rules. The alternative methods section of the 2013 rule was developed to insure the CBM Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *“that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule.”*

In the version of the Rule presented to and approved by the EMC on July 9th 2015, retroactive credit generation was made available for traditional restoration projects. This small change in verbiage will have massive fiscal and environmental impacts. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, discusses at length the affects the change would have. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State’s Division of Mitigation Services. No matter one’s opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014 Stakeholder Report is substantively very different, directly contradicting S.L. 2014-95.

The State’s benefit, represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen. It is important to note a vast majority of the retroactive credit to be generated by the State would come from projects constructed to satisfy stream mitigation under the state’s in-lieu fee program and not riparian buffers, two very different regulated natural resources.

Conclusion

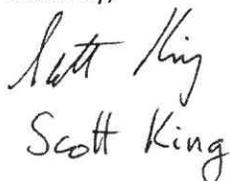

Retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset impacts. To change the Rule and to grant the State such a tremendous advantage (utilizing buffers from old projects that are already planted and protected), will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. Furthermore, if the Rule is approved the use of retroactive credit would result in over 600 acres of new buffer and wildlife area that will never be created and preserved.

I am opposed to retroactive credit generation and the proposed CMB Rule as it is presented today.

In addition, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period (February 17, 2015 thru April 17, 2015). This Second Addendum specifically details the substantive changes to the CBM and should have been made available during the public comment period. The Note’s detailing of the fiscal changes and benefit to the State, is a clear acknowledgement from the State, that the 2015 Rule is substantively different than the 2013 Rule - directly contradicting S.L. 2014-95.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

Scott King

Raleigh, NC 27699-6714

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission ("RRC") on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to expand retroactive credit generation from alternative mitigation use (enhancement/preservation) to all types of mitigation (restoration). My concerns with the CMB rule are outlined below.

A Substantive change to Retroactive Credit Generation:

Background:

Retroactive credit generation has been an issue of concern with the CMB rule since it was first contemplated. The goal of the Riparian Buffer Rule (15A NCAC 2B .0295) is to protect water quality in the nutrient sensitive waters of North Carolina. The mitigation component of the rule is intended to offset impacts to buffers with newly installed buffers adding wildlife, open space, and water quality improvement to the watershed to replace the buffers impacted. In the case of retroactive credit generation, credits would be generated from buffers that are already in existence and protected, not adding any new buffer when existing buffers are impacted. There is also no clear way to demonstrate the intent of the rule and benefit to water quality improvements. In some cases, the ecological benefit of a retroactive credit would be based on arbitrary judgment without any documented baseline conditions to prove water quality improvements or any discernible benefit to the public. Furthermore, retroactive credit generation can lead to market abuses and distortions specifically when it benefits one entity over another. Many private businesses invest their money in creating new buffers to offset

impacts and to have the rules change to allow the state to utilize buffers from old projects that are already planted and protected, will substantially impact private businesses who have invested their money in this market. Over \$28 million dollars will be removed from this market which will essentially kill it for 10+ years. I am opposed to retroactive credit generation.

Issue at hand - Substantive change to Retroactive Credit Generation from July 2013 Rule to July 2015 Rule:

In the CBM rule approved July 1, 2013 by the EMC, retroactive credit was included only to allow for credit generation from alternative mitigation options which were not available to applicants or mitigation providers under the original six rules. The new alternative methods were developed to insure the consolidated Rule was meeting its objective in a cost-effective manner. As stated in Section (k)(1)(B) of the 2013 Rule, retroactive credit was only allowed to be produced through alternative buffer mitigation, and on projects *"that have been constructed and are within the required monitoring period on the effective date of this Rule... Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule."*

The Addendum 1 to Fiscal Note Analysis, dated May 14, 2013, identified a \$3.4 million, one-time benefit as a result of retroactive credit generation.

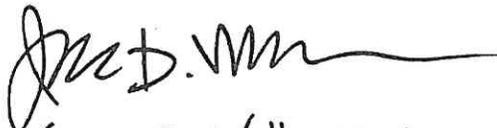

In the version of the Rule presented to the EMC on July 9th 2015, retroactive credit generation is now available for all types of mitigation, including traditional restoration and enhancement. No matter one's opinion of retroactive credit generation, this disparity from the recommended rule text contained in the April 10, 2014, Stakeholder Report is substantively very different. In fact, the newly released Second Addendum to the Fiscal Note Analysis, dated June 1, 2015, goes into great detail about effects of retroactive credit generation. Most notably, it references a one-time benefit of \$29.66 million, with \$28.37 million of that benefit accruing to the State's Division of Mitigation Services. This represents over 600 acres of new buffers that will never be planted and preserved if the retroactive credit generation part of this rule is allowed. This represents land that will help water quality for the rivers, estuaries and sounds of North Carolina as well as land for wildlife and sportsmen. Again, this is money removed from the private mitigation market which truly offsets impacts with new buffer areas as well as over 600 acres of new buffer and wildlife area that will never be created and preserved.

For nearly two pages, the Second Addendum to the Fiscal Note details the effect the altered text regarding retroactive credit generation would have on the environment and private mitigation providers. Furthermore, it is important to note a vast majority of the retroactive credit to be generated by the State would come from projects constructed to satisfy stream mitigation under the state's in-lieu fee program.

Furthermore, the Second Addendum to the Fiscal Note Analysis for the CBM rule was released June 1, 2015 and not made available during the public comment period which lasted from February 17, 2015 thru April 17, 2015. This Second Addendum represents a substantial substantive change to the CBM for which the public was not allowed to review and make comment. The substantive change also means the CBM rule is no longer substantively identical to the April 10, 2014 Stakeholder Report.

Thank you for your time, consideration, and the opportunity to comment.

Sincerely,

Shawn D. Wilkerson

Subject: Consolidated Buffer Mitigation Rule
Letter of Opposition

Members of the Commission,

I am writing to express concerns regarding 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). I request that the CMB rule be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

The CMB rule was originally adopted by the Rules Review Commission ("RRC") on July 1, 2013. Following approval, the RRC received 10 letters of objection to the Rule triggering legislative review. On June 26, 2014, Senate Bill 883 was filed to disapprove the Rule in accordance with G.S. 150B-21.3. Senate Bill 883 was signed into law as S.L. 2014-95 on August 1, 2014. S.L. 2014-95 directed the EMC that:

No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

Following notice and public comment, the temporary CMB rule was adopted by the EMC on September 30, 2014 and became effective on October 24, 2014. The temporary CMB rule was substantially amended in July 2015 to expand retroactive credit generation from alternative mitigation use (enhancement/preservation) to all types of mitigation (restoration). My concerns with the CMB rule are outlined below.

A Substantive change to Retroactive Credit Generation:

Subject: Objection/Request for Legislative Review of Rule 15A NCAC 02B .0295
Mitigation Program Requirements for Protection and Maintenance of Riparian
Buffers

Dear Members of the Commission:

I request that the above rule(s) be reviewed in the upcoming legislative session as set out in N.C.G.S. 150B-21.3. I further request that the rule(s) be subject to a delayed effective date as set out in that same provision.

While the Division of Water Resources has done a commendable job to consolidate and streamline the State's buffer rules, I must object to the rules as they are currently written. The rule approved by the EMC at their July meeting allows for the use of retro-active crediting of buffer sites in 15A NCAC 02B .0295(1)(6) that gives excessive latitude to use credits funded for different purposes and under different rules and would result in a net environmental loss.

The main reason for this position is that buffer impacts were not regulated or mitigated prior to rule existence. Without accounting for the loss of streamside forest on pre-buffer rule permits, there is no understanding whether pre-rule projects have accounted for those losses.

I suggest that either of the following conditions be satisfied prior to allowing use of retroactive credits:

1. A statement within the approved Bank Parcel Development Plan or a letter from the Authority prior to the project's implementation that state's the Authority will allow buffer credits from the site, if any exist, for prospective rules. Even with such a letter, I'd advocate that these credits should sunset 10 years after project implementation if such rules are not in place; or
2. Sites where retro-active are sought should have a conservation easement on the site which has been enacted within a defined time prior to the rules effectiveness. Three years seems to be an appropriate window. In addition to meeting that time frame, the site should clearly demonstrate that the existing conditions on the sight warrant the awarding of such credit by the authority.

While these comments were submitted to NC DENR, insufficient action was taken by the agency to address them in the rule approved by the EMC in July. Consequently, I'm filing this objecting and requesting that the rules be sent to the legislature for their review.

Thank you,

Mike Herrmann

Withdrawal of Objection Letter

Members of the Commission,

I am writing to request withdrawal of my previously submitted letter objecting to 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). During the August 20, 2015 Rules Review Commission ("RRC") meeting the RRC objected to the rule based on failure to comply with the Administrative Procedure Act and lack of statutory authority. The CBR was revised to comply with reasons the RRC objected to the rule and passed the Environmental Management Commission (EMC) on September 10, 2015. Based on the changes made to the CBR, I no longer have any objection to the rule.

Please accept my request for withdrawal. Thank you for your time and attention to this matter.

Sincerely,

Ward Elis

The CBR was revised to comply with reasons the RRC objected to the rule and passed the Environmental Management Commission (EMC) on September 10, 2015. Based on the changes made to the CBR, I no longer have any objection to the rule.

Please accept my request for withdrawal. Thank you for your time and attention to this matter.

Sincerely,

Shawn D. Wilkerson

OFFICE OF ADMIN HEARINGS

Members of the Commission,

I am writing to request withdrawal of my previously submitted letter, dated August 7, 2015, objecting to 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) ("CMB rule"). During the August 20, 2015 Rules Review Commission ("RRC") meeting the RRC objected to the rule based on failure to comply with the Administrative Procedure Act and lack of statutory authority. The CBR was revised to comply with reasons the RRC objected to the rule and passed the Environmental Management Commission (EMC) on September 10, 2015. Based on the changes made to the CBR, I no longer have any objection to the rule.

Please accept my request for withdrawal. Thank you for your time and attention to this matter.

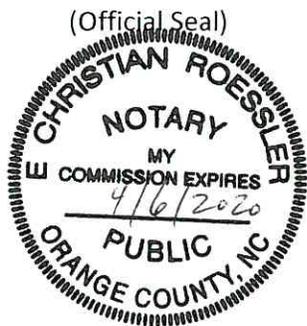

Sincerely,

John Hutton

Orange County, North Carolina

Subject: Objection Letter Withdrawal of Rule 15A NCAC 02B .0295 Mitigation Program
Requirements for Protection and Maintenance of Riparian Buffers

Dear Members of the Commission:

I am writing to request withdrawal of my previously submitted letter, dated August 3, 2015, objecting to 15A NCAC 02B .0295 (Consolidated Buffer Mitigation Rule) (“CBR rule”). During the August 20, 2015 Rules Review Commission (“RRC”) meeting the RRC objected to the rule based on failure to comply with the Administrative Procedure Act and lack of statutory authority. The CBR was revised to comply with reasons the RRC objected to the rule and passed the Environmental Management Commission (EMC) on September 10, 2015. Based on the changes made to the CBR, I no longer have any objection to the rule.

Please accept my request for withdrawal. Thank you for your time and attention to this matter.

Sincerely,

Mike Herrmann

Re: Objection to Rule 15A NCAC 02B .0295

Dear Ms. Everett:

At its meeting yesterday, the Rules Review Commission objected to the above-captioned rule in accordance with G.S. 150B-21.10.

The Commission objected to the Rule, finding the agency failed to comply with the Administrative Procedure Act. Specifically, the Commission found that changing “are” to “may” in Subparagraph (l)(6) after publication constitutes a “substantial change” pursuant to G.S. 150B-21.2(g).

The Commission also objected based upon a lack of statutory authority. Specifically, the Commission found that Session Law 2014-95 required the agency to adopt a rule that was substantively identical to the recommended rule text contained in the April 10, 2014 Consolidated Buffer Mitigation Rule Stakeholder Report. The Commission found that the agency did not comply with the statutory mandate because it moved the language that was identified as an Alternative Buffer Mitigation Option in the stakeholder report (located in Paragraph m) to an accepted mitigation option in Paragraph l of the permanent rule. Therefore, the agency did not act within the statutory authority granted to it by the Session Law.

Please respond to this letter in accordance with the provisions of G.S. 150B-21.12. If you have any questions regarding the Commission’s actions, please let me know.

Sincerely,

Amanda J. Reeder

REVISED RRC STAFF OPINION

Please Note: This communication is either 1) only the recommendation of an RRC staff attorney as to action that the attorney believes the Commission should take on the cited rule at its next meeting, or 2) an opinion of that attorney as to some matter concerning that rule. The agency and members of the public are invited to submit their own comments and recommendations (according to RRC rules) to the Commission.

AGENCY: Environmental Management Commission

RULE CITATION: 15A NCAC 02B .0295

RECOMMENDED ACTION:

- X Note staff's comment
- X Object, based on:
 - Lack of statutory authority
 - Unclear or ambiguous
 - Unnecessary
- X Failure to comply with the APA
 - Extend the period of review

COMMENT:

Background:

The Commission reviewed this Rule in June 2013. The Rule was objected to at that meeting, and the Commission found the Rule was ambiguous in then Paragraphs (c), (g), (j), and (k). The EMC submitted a revised rule, and it was approved by the Commission in July 2013. (The RRC approved version of the Rule is attached in the Consolidated Buffer Mitigation Rule Stakeholder Report as "Attachment C"; it is attached in this document.) The proposed permanent Rule begins on Page 54 of this tab.

Pursuant to G.S. 150B-21.3(b2), the Rule received 10 letters of objection, requesting legislative review and a delayed effective date. The legislature passed Session Law 2014-95 (attached). That Session Law disapproved the Rule as approved by the Commission and directed the EMC to adopt a temporary rule "substantively identical" to the recommended rule text in the Consolidated Buffer Mitigation Rule Stakeholders Report by October 1, 2014 (also attached). The EMC adopted a rule that was a verbatim recitation of the report.

The Commission approved this Rule as a temporary rule at its October 2014 meeting. The agency made changes to the temporary rule in the permanent rulemaking process. Staff does not believe these changes were substantive, but rather served to clarify the language. Staff further notes that some deletions or additions of text simply reflect movement of Paragraphs within the Rule. (For example, Paragraph (h) was struck on Page 5 of the Rule, but it was not deleted; instead, the text was moved without any change to Paragraph (m) on Page 8 of the Rule.) Therefore, staff does not

Amanda J. Reeder
Commission Counsel
Revised Staff Opinion issued August 13, 2015

believe that changes to the Rule deviate from the substantive requirements of Session Law 2014-95.

Recommended Objection:

Revisions in indented font

Staff believes that some of the changes made to the language after publication in the NC Register create a substantial change pursuant to G.S. 150B-21.2(g).

G.S. 150B-21.2(g) states, in relevant part:

(g) Adoption. - An agency shall not adopt a rule that differs substantially from the text of a proposed rule published in the North Carolina Register unless the agency publishes the text of the proposed different rule in the North Carolina Register and accepts comments on the proposed different rule for the time set in subsection (f) of this section.

An adopted rule differs substantially from a proposed rule if it does one or more of the following:

- (1) Affects the interests of persons who, based on the proposed text of the rule published in the North Carolina Register, could not reasonably have determined that the rule would affect their interests.
- (2) Addresses a subject matter or an issue that is not addressed in the proposed text of the rule.
- (3) Produces an effect that could not reasonably have been expected based on the proposed text of the rule.

In Subparagraph (l)(6) (Page 7 of the Rule), as published, the EMC stated that if a mitigation project's monitoring was completed and released by the Division, the project was eligible for use as a buffer mitigation site and would be for a period of ten years from the effective date of the Rule. After publication, the language was changed to state that projects whose monitoring was completed within the last ten years of the effective date of the rule may be eligible to use the site as a buffer mitigation site. The agency changed both the timelines and the certainty of "are" to "may." Staff believes this constitutes a substantial change as defined by G.S. 150B-21.2(g), as it produces an effect that could not have been reasonably expected based upon the proposed text of the Rule.

Staff raised two concerns in this Subparagraph. The first was changing "are" to "may." In discussions with EMC staff, staff was informed that the agency proposes to change "may" to "shall." As the Commission reviews the rule as submitted, staff is still recommending objection to the Rule as submitted, but will recommend approving the rewritten rule with "shall."

The second concern staff addressed in this Subparagraph was changing the deadline from ten years in the future to the last ten years for retroactive credit. Agency staff stated that the changed language was inadvertent wording error in the 2013

Amanda J. Reeder
Commission Counsel

Revised Staff Opinion issued August 13, 2015

adoption of the Rule and that it is well understood within the regulated community that the intent of the rule was to refer to projects completed in the last ten years, not those that would be built in the next ten years. EMC staff shared comments received from the 2013 comment period that indicate that this understanding of the regulated public is consistent with the interpretation of the agency.

The agency also added language to state that all mitigation proposals submitted are required to include additional information, including maps, documentation of pre-existing conditions and activities conducted at buffer mitigation sites. The additional requirements themselves might not be substantial, as they mostly refer to documentation of requirements in other parts of the Rule; however, as they relate to documentation to show that a project “may” be eligible, staff believes the changes are substantial.

Staff only believes the changes are substantial as they relate to the language that projects “may” be eligible.

In the Table in Subparagraph (n)(1) (Page 8 of the Rule), the agency further changed language after publication to state that buffer restoration sites or enhancement sites may be proposed for buffer widths of 101-200 feet that will only receive 33% credit, rather than the published 50%. Staff believes this created an effect that could not have been expected based on the proposed text of the Rule.

In conversation with EMC staff, the EMC staff explained that while the percentage of credit for a buffer width was indeed reduced from 50% to 33%, the change will result in additional credit for the regulated public. This is because the change also removed language that limited the area of the buffer mitigation site in this range to no more than 10% of the total area. Therefore, while the percentage is smaller, the amount of credit that can be granted is larger. The calculation submitted by the agency is as follows:

Credit afforded to the regulated public has been increased based on the changes proposed:

Example:

The published version:

100 feet of stream with buffer restoration on both sides of the stream

Area of buffer from 0 to 100 ft = $100 \times 200 = 20,000 \text{ ft}^2$

Area of buffer from 101-200 feet can be no more than 10% of total area (22,200 ft²) at 50% credit = 1,100 ft² credit.

Total credits are 21,100 ft².

This calculation is burdensome and confusing.

Proposed change:

100 feet of stream with buffer restoration on both sides of stream

Area of buffer from 0 to 100 ft = $100 \times 200 = 20,000 \text{ ft}^2$

Area of buffer from 101-200 feet at 33% credit = 6,600 ft².

Total credits are 26,600 ft².

Therefore, staff does not believe this change is “substantial,” as it does not produce an effect that could not have been reasonably expected based upon the proposed text of the Rule.

In Subparagraphs (o)(3) and (o)(4) (Page 14 of the Rule), the agency added language after publication to state that credits would be capped at 25% of the total area. This cap was not in the initial text and it appears to produce an effect that could not have been reasonably expected based on the proposed text of the Rule.

EMC staff referred to language that was published in Paragraph (h) of the Rule (located on Page 5), which stated:

Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer impact, and the remaining mitigation resulting from the application of the zonal mitigation ratios in Paragraph (e) and locational mitigation ratios in Paragraph (f) may be met through other mitigation options.

Agency staff stated that this language, in a Paragraph entitled, “Mitigation Options for Applicants” was intended to convey that applicants could not rely entirely upon preservation for credits. The language was proposed for deletion after publication and the caps in (o)(4) and (o)(5) were inserted to make the intent clearer. Further, rather than placing the burden of accounting upon applicants (as it would be in Paragraph (h)), the change now requires mitigation providers to provide the accounting for the preservation credits. EMC staff also stated that this change was made in response to public comments received from mitigation providers, who will have the same burden based upon the new language and reduce the burden upon applicants.

Therefore, staff does not believe this change is “substantial,” as it does not produce an effect that could not have been reasonably expected based upon the proposed text of the Rule.

Therefore, staff recommends objecting to the rules based upon failure to comply with the APA, based upon changes made to the rule language after publication that create a substantial change as set forth in G.S. 150B-21.2(g).

Therefore, staff recommends objecting to the rule based upon failure to comply with the APA, based upon a change made to Subparagraph (l)(6) language after publication that create a substantial change as set forth in G.S. 150B-21.2(g). Specifically, staff recommends finding changing “are” to “may” is substantial.

Commission Counsel

Revised Staff Opinion issued August 13, 2015

**GENERAL ASSEMBLY OF NORTH CAROLINA
SESSION 2013**

**SESSION LAW 2014-95
SENATE BILL 883**

AN ACT TO DISAPPROVE THE MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND MAINTENANCE OF RIPARIAN BUFFERS RULE ADOPTED BY THE ENVIRONMENTAL MANAGEMENT COMMISSION, DIRECT THE ENVIRONMENTAL MANAGEMENT COMMISSION TO ADOPT A NEW MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND MAINTENANCE OF RIPARIAN BUFFERS RULE, AND AMEND WASTEWATER DISPOSAL SYSTEM REQUIREMENTS.

The General Assembly of North Carolina enacts:

SECTION 1. Pursuant to G.S. 150B-21.3(b1), 15A NCAC 02B .0295 (Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers), as adopted by the Environmental Management Commission on May 9, 2013, and approved by the Rules Review Commission on July 18, 2013, is disapproved.

SECTION 2. No later than October 1, 2014, the Environmental Management Commission shall adopt a Mitigation Program Requirements for Protection and Maintenance of Riparian Buffers Rule pursuant to G.S. 150B-21.1. The rule adopted pursuant to this section shall be substantively identical to the recommended rule text contained in the April 10, 2014, Consolidated Buffer Mitigation Rule Stakeholder Report.

SECTION 3. G.S. 143-215.1 is amended by adding a new subsection to read:

"(a7) For high rate infiltration wastewater disposal systems that utilize non-native soils or materials in a basin sidewall to enhance infiltration, the non-native soils or materials in the sidewall shall not be considered part of the disposal area provided that all of the following standards are met:

(1) In addition to the requirements established by the Commission pursuant to subsection (a4) of G.S. 143-215.1, the treatment system shall include a mechanism to provide filtration of effluent to 0.5 microns or less and all essential treatment units shall be provided in duplicate.

(2) Particle size analysis in accordance with ASTM guidelines for all native and non-native materials shall be performed. Seventy-five percent (75%) of all non-native soil materials specified shall have a particle size of less than 4.8 millimeters.

(3) Non-native materials shall comprise no more than fifty percent (50%) of the basin sidewall area.

(4) Systems meeting the standards set out in subdivisions (1), (2), and (3) of this subsection shall be considered nondischarge systems, and the outfall of any associated groundwater lowering device shall be considered groundwater provided the outfall does not violate water quality standards."

SECTION 4. This act is effective when it becomes law.

MEMORANDUM

To: Thomas A. Reeder, Director

From: Karen Higgins, 401 & Buffer Permitting Unit Supervisor *KH*

Subject: Consolidated Buffer Mitigation Rule (15A NCAC 02B .0295) Stakeholder Report

On May 9, 2013 the Environmental Management Commission adopted Rule 15A NCAC 02B .0295. On July 18, 2013, the Rules Review Commission approved Rule 15A NCAC 02B .0295, however more than ten letters of objection were received. The Department (DENR) requested us (DWR) to assemble a stakeholder group to resolve the objections to the rule.

The stakeholder group was assembled with seven members:

- Norton Webster, Environmental Banc & Exchange
- John Hutton, Wildlands Engineering
- Tara Disy Allden, Restoration Systems
- Jeff Furness, PCS Phosphate
- Leilani Paugh, NC Department of Transportation
- Michael Ellison, NC Ecosystem Enhancement Program
- Eric Kulz, NC Division of Water Resources

The group met between October 2013 and March 2014 to work through each paragraph of the rule. The group came to a consensus on all the revisions to the OAH draft rule and those recommendations are attached.

If you have any questions or require further information, please let me know.

Attachments

- A – Stakeholder group's recommended rule text for 15A NCAC 02B .0295
- B – Stakeholder group's recommended rule text for 15A NCAC 02B .0295 showing all revisions to the OAH draft of the Approved Rule
- C – OAH draft of the Approved rule

Attachment A

Stakeholder group's recommended rule text for 15A NCAC 02B .0295

1 15A NCAC 02B .0295 MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND
2 MAINTENANCE OF RIPARIAN BUFFERS

3 (a) PURPOSE. The purpose of this Rule is to set forth the mitigation requirements that apply to applicants listed in
 4 Subparagraphs (1) and (2) of this Paragraph and to set forth requirements for buffer mitigation providers. Buffer
 5 mitigation is required when one of the following applies:

6 (1) The applicant has received an authorization certificate for impacts that cannot be avoided or
 7 practicably minimized pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243, 15A NCAC
 8 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607; or

9 (2) The applicant has received a variance pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243,
 10 15A NCAC 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607
 11 and is required to perform mitigation as a condition of a variance approval.

12 (b) DEFINITIONS. For the purpose of this Rule, these terms shall be defined as follows:

13 (1) "Authority" means either the Division or a local government that has been delegated or designated
 14 to implement the riparian buffer program.

15 (2) "Division" means the Division of Water Resources of the North Carolina Department of
 16 Environment and Natural Resources.

17 (3) "Enhancement Site" means a riparian zone site characterized by conditions between that of a
 18 restoration site and a preservation site such that the establishment of woody stems (*i.e.*, tree or
 19 shrub species) will maximize nutrient removal and other buffer functions.

20 (4) "Hydrologic Area" means the Watershed Boundary Dataset (WBD), located at
 21 [http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-](http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-6DC7-4EC3-88A9-03E6B7D55653})
 22 [6DC7-4EC3-88A9-03E6B7D55653}](http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-6DC7-4EC3-88A9-03E6B7D55653}) using the eight-digit Hydrologic Unit Code (HUC) prepared
 23 by the United States Geological Survey.

24 (5) "Locational Ratio" means the mitigation ratio applied to the mitigation requirements based on the
 25 location of the mitigation site relative to the impact site as set forth in Paragraph (f).

26 (6) "Monitoring period" means the length of time specified in the approved mitigation plan during
 27 which monitoring of vegetation success and other anticipated benefits to the adjacent water as
 28 listed in the authorization certification is done.

29 (7) "Non-wasting endowment" means a fund that generates enough interest to cover the cost of the
 30 long term monitoring and maintenance.

31 (8) "Outer Coastal Plain" means the portion of the state shown as the Middle Atlantic Coastal Plain
 32 (63) on Griffith, *et al.* (2002) "Ecoregions of North and South Carolina." Reston, VA, United
 33 States Geological Survey.

34 (9) "Preservation Site" means riparian zone sites that are characterized by a natural forest consisting
 35 of the forest strata and diversity of species appropriate for the Omernik Level III ecoregion.

36 (10) "Restoration Site" means riparian zone sites that are characterized by an absence of trees and by a
 37 lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings) or sites that are

1 characterized by scattered individual trees such that the tree canopy is less than 25% of the cover
2 and by a lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings).

3 (11) "Riparian buffer mitigation unit" means a unit representing a credit of riparian buffer mitigation
4 that offsets one square foot of riparian buffer impact.

5 (12) "Riparian wetland" means a wetland that is found in one or more of the following landscape
6 positions: in a geomorphic floodplain; in a natural topographic crenulation; contiguous with an
7 open water equal to or greater than 20 acres in size; or subject to tidal flow regimes excluding
8 salt/brackish marsh wetlands.

9 (13) "Urban" means an area that is designated as an urbanized area under the most recent federal
10 decennial census or within the corporate limits of a municipality.

11 (14) "Zonal Ratio" means the mitigation ratio applied to impact amounts in the respective zones of the
12 riparian buffer as set forth in Paragraph (e).

13 (c) APPLICATION REQUIREMENTS, MITIGATION SITE REQUIREMENTS AND MITIGATION OPTIONS.

14 Any applicant who seeks approval to impact riparian buffers covered under this Rule who is required by Paragraph

15 (a) shall submit to the Division a written mitigation proposal that calculates the required area of mitigation and
16 describes the area and location of each type of proposed mitigation. The applicant shall not impact buffers until the

17 Division has approved the mitigation plan by issuance of written authorization. For all options except payment of a

18 fee under Paragraphs (j) or (k) of this Rule, the proposal shall include a commitment to provide a perpetual

19 conservation easement or similar legal protection mechanism to ensure perpetual stewardship that protects the

20 mitigation site's nutrient removal and other water quality functions, a commitment to provide a non-wasting

21 endowment or other financial mechanism for perpetual stewardship and protection, and a commitment to provide a

22 completion bond that is payable to the Division sufficient to ensure that land or easement purchase, construction,

23 monitoring and maintenance are completed. For each mitigation site, the Division shall identify functional criteria

24 to measure the anticipated benefits of the mitigation to the adjacent water. The Division shall issue a mitigation

25 determination that specifies the area, type and location of mitigation and the water quality benefits to be provided by

26 the mitigation site. The mitigation determination issued according to this Rule shall be included as an attachment to

27 the authorization certification. The applicant may propose any of the following types of mitigation and shall provide

28 a written demonstration of practicality that takes into account the relative cost and availability of potential options,

29 as well as information addressing all requirements associated with the option proposed:

30 (1) Applicant provided riparian buffer restoration or enhancement pursuant to Paragraph (i) of this
31 Rule;

32 (2) Payment of a compensatory mitigation fee to a mitigation bank if buffer credits are available
33 pursuant to Paragraph (j) of this Rule or payment of a compensatory mitigation fee to the Riparian
34 Buffer Restoration Fund pursuant to Paragraph (k) of this Rule. Payment must conform to the
35 requirements of G.S. 143-214.20;

36 (3) Donation of real property or of an interest in real property pursuant to Paragraph (l) of this Rule;
37 or

(4) Alternative buffer mitigation options pursuant to Paragraph (m) of this Rule.

(d) AREA OF IMPACT. The authority shall determine the area of impact in square feet to each zone of the proposed riparian buffer impact by adding the following:

- (1) The area of the footprint of the use impacting the riparian buffer;
- (2) The area of the boundary of any clearing and grading activities within the riparian buffer necessary to accommodate the use;
- (3) The area of any ongoing maintenance corridors within the riparian buffer associated with the use; and
- (4) The authority shall deduct from this total the area of any wetlands that are subject to and compliant with riparian wetland mitigation requirements under 15A NCAC 02H .0506 and are located within the proposed riparian buffer impact area.

(e) AREA OF MITIGATION REQUIRED ON ZONAL MITIGATION RATIOS. The authority shall determine the required area of mitigation for each zone by applying each of the following ratios to the area of impact calculated under Paragraph (d) of this Rule:

Basin/Watershed	Zone 1 Ratio	Zone 2 Ratio
Neuse River Basin (15A NCAC 02B .0233)	3:1	1.5:1
Catawba River Basin (15A NCAC 02B .0243)	2:1	1.5:1
Randleman Lake Watershed (15A NCAC 02B .0250)	3:1	1.5:1
Tar-Pamlico River Basin (15A NCAC 02B .0259)	3:1	1.5:1
Jordan Lake Watershed (15A NCAC 02B .0267)	3:1	1.5:1
Goose Creek Watershed (15A NCAC 02B .0607)	3:1 ^A	

^A The Goose Creek Watershed does not have a Zone 1 and Zone 2. The mitigation ratio in the Goose Creek Watershed is 3:1 for the entire buffer.

(f) AREA OF MITIGATION REQUIRED ON LOCATIONAL MITIGATION RATIOS. The applicant must use the following locational ratios as applicable based on location of the proposed mitigation site relative to that of the proposed impact site. Locational ratios shall be as follows:

Location	Ratio
Within the 12-digit HUC ^A	0.75:1
Within the eight-digit HUC ^B	1:1
In the adjacent eight-digit HUC ^{B,C}	2:1

^A Except within the Randleman Lake Watershed. Within the Randleman Lake Watershed the ratio is 1:1.

^B Except as provided in Paragraph (g) of this Rule.

^C To use mitigation in the adjacent eight-digit HUC, the applicant shall describe why buffer mitigation within the eight-digit HUC is not practical for the project.

(g) GEOGRAPHIC RESTRICTIONS ON LOCATION OF MITIGATION. Mitigation shall be performed in the same river basin in which the impact is located with the following additional specifications:

(1) In the following cases, mitigation shall be performed in the same watershed in which the impact is located:

- (A) Falls Lake Watershed, as defined in Rule 15A NCAC 02B .0275;
- (B) Goose Creek Watershed, as defined in Rule 15A NCAC 02B .0601;
- (C) Randleman Lake Water Supply Watershed, as defined in Rule 15A NCAC 02B .0248;
- (D) Each subwatershed of the Jordan Lake watershed, as defined in Rule 15A NCAC 02B .0262; and
- (E) Other watersheds as specified in riparian buffer protection rules adopted by the Commission.

(2) Buffer mitigation for impacts within watersheds with riparian buffer rules that also have federally listed threatened or endangered aquatic species may be done within other watersheds with the same federally listed threatened or endangered aquatic species as long as the impacts are in the same river basin and same Omernik Level III ecoregion as the mitigation site.

(h) RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation units as follows:

Mitigation Activity	Square Feet of Mitigation Buffer	Riparian Buffer Mitigation Units Generated
Restoration	1	1
Enhancement	2	1
Preservation on Non-Subject Urban Streams	3	1
Preservation on Subject Urban Streams	3	1
Preservation on Non-Subject Rural Streams	5	1
Preservation on Subject Rural Streams	10	1

(i) RIPARIAN BUFFER RESTORATION OR ENHANCEMENT. Division staff shall make an on-site determination as to whether a potential mitigation site qualifies as a restoration or enhancement site based on the applicable definition in Paragraph (b) of this Rule. Riparian buffer restoration or enhancement sites shall meet the following requirements:

(1) Buffer restoration or enhancement may be proposed as follows:

Urban Areas		Non-Urban Areas	
Buffer width (ft)	Proposed Percentage of Full Credit	Buffer width (ft)	Proposed Percentage of Full Credit
Less than 20	0 %	Less than 20	0 %
20-29	75 %	20-29	0 %
30-100	100 %	30-100	100 %
101-200 ^A	50 % ^A	101-200 ^A	50 % ^A

^A The area of the mitigation site beyond 100 linear feet from the top of bank shall comprise no more than 10% of the total area of mitigation.

- 1 (2) The location of the restoration or enhancement shall comply with the requirements of Paragraphs
2 (e), (f) and (g) of this Rule and in the Catawba watershed, buffer mitigation may be done along the
3 lake shoreline as well as along intermittent and perennial stream channels throughout the
4 watershed.
- 5 (3) Diffuse flow of runoff shall be maintained in the riparian buffer. Any existing impervious cover
6 or stormwater conveyances such as ditches, pipes or drain tiles shall be eliminated and the flow
7 converted to diffuse flow. If elimination of existing stormwater conveyances is not feasible, then
8 the applicant or mitigation provider shall provide a delineation of the watershed draining to the
9 stormwater outfall and the percentage of the total drainage treated by the riparian buffer for
10 Division approval; credit may be reduced proportionally.
- 11 (4) The applicant or mitigation provider shall submit a restoration or enhancement plan for written
12 approval by the Division. The restoration or enhancement plan shall demonstrate compliance with
13 the requirements of Subparagraphs (1) through (3) of this Paragraph and shall contain the
14 following in addition to elements required in Paragraph (c) of this Rule:
- 15 (A) A map of the proposed restoration or enhancement site;
- 16 (B) A vegetation plan that shall include a minimum of four native hardwood tree species or
17 four native hardwood tree and native shrub species, where no one species is greater than
18 50% of established stems, established at a density sufficient to provide 260 stems per acre
19 at the completion of monitoring. Native volunteer species may be included to meet
20 performance standards. The Division may approve alternative vegetation plans upon
21 consideration of factors including site wetness and plant availability to meet the
22 requirements of this Part;
- 23 (C) A grading plan (if applicable). The site shall be graded in a manner to ensure diffuse
24 flow through the entire riparian buffer;
- 25 (D) A schedule for implementation, including a fertilization and herbicide plan if applicable;
26 and
- 27 (E) A monitoring plan, including monitoring of vegetative success and other anticipated
28 benefits to the adjacent water as listed in the Authorization Certification.
- 29 (5) Within one year after the Division has approved the restoration or enhancement plan, the applicant
30 or mitigation provider shall present documentation to the Division that the riparian buffer has been
31 restored or enhanced unless the Division agrees in writing to a longer time period due to the
32 necessity for a longer construction period.
- 33 (6) The mitigation area shall be placed under a perpetual conservation easement or similar legal
34 protection mechanism to provide for protection of the property's nutrient removal and other water
35 quality functions.
- 36 (7) The applicant or mitigation provider shall submit written annual reports for a period of five years
37 after the restoration or enhancement showing that the trees or tree and shrub species planted are

1 meeting success criteria and that diffuse flow through the riparian buffer has been maintained.
 2 The applicant or mitigation provider shall replace trees or shrubs and restore diffuse flow if
 3 needed during that five-year period. Additional years of monitoring may be required if the
 4 objectives under Paragraph (i) have not been achieved at the end of the five-year monitoring
 5 period.

6 (8) The mitigation provider shall provide a site specific credit/debit ledger to the Division at regular
 7 intervals once credits are established and until they are exhausted.

8 (9) A completion bond that is payable to the Division sufficient to ensure that land purchase,
 9 construction, monitoring and maintenance are completed. A non-wasting endowment or other
 10 financial mechanism for perpetual maintenance and protection must be provided.

11 (j) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC MITIGATION BANK.

12 Applicants who choose to satisfy some or all of their mitigation by purchasing mitigation credits from a private or
 13 public mitigation bank shall meet the following requirements:

14 (1) The mitigation bank from which credits are purchased is listed on the Division's webpage
 15 (<http://portal.ncdenr.org/web/wq/swp/ws/401>) and shall have available riparian buffer credits;

16 (2) The mitigation bank from which credits are purchased shall be located as described in Paragraphs
 17 (e), (f) and (g) of this Rule; and

18 (3) After receiving a mitigation acceptance letter from the mitigation provider, proof of payment for
 19 the credits shall be provided to the Division prior to any activity that results in the removal or
 20 degradation of the protected riparian buffer.

21 (k) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND. Applicants who choose to satisfy some
 22 or all of their mitigation determination by paying a compensatory mitigation fee to the Riparian Buffer Restoration
 23 Fund shall meet the requirements of 15A NCAC 02B .0269 (Riparian Buffer Mitigation Fees to the NC Ecosystem
 24 Enhancement Program). Payment made to the NC Ecosystem Enhancement Program (the Program) shall be
 25 contingent upon acceptance of the payment to the Program. The financial, temporal and technical ability of the
 26 Program to satisfy the mitigation request shall be considered to determine whether the Program shall accept or deny
 27 the request.

28 (l) DONATION OF PROPERTY. Applicants who choose to satisfy their mitigation determination by donating real
 29 property or an interest in real property to fully or partially offset an approved payment into the Riparian Buffer
 30 Restoration Fund pursuant to Paragraph (k) of this Rule shall meet the following requirements:

31 (1) The value of the property interest shall be determined by an appraisal performed in accordance
 32 with Part (l)(4)(D) of this Rule. The donation shall satisfy the mitigation determination if the
 33 appraised value of the donated property interest is equal to or greater than the required fee. If the
 34 appraised value of the donated property interest is less than the required fee calculated pursuant to
 35 15A NCAC 02B .0269, the applicant shall pay the remaining balance due.

36 (2) The donation of real property interests shall be granted in perpetuity.

- 1 (3) Donation of real property interests to satisfy the full or partial payments under Paragraph (k) shall
2 be accepted only if such property meets all of the following requirements:
- 3 (A) The property shall be suitable for restoration or enhancement to successfully produce
4 viable riparian buffer compensatory mitigation credits in accordance with Paragraph (i)
5 of this Rule or the property shall be suitable for preservation to successfully produce
6 viable riparian buffer compensatory mitigation credits in accordance with Part (m)(2)(C)
7 of this Rule;
- 8 (B) The property shall be located in an area where the Program can reasonably utilize the
9 credits, based on historical or projected use, to offset compensatory mitigation
10 requirements;
- 11 (C) The estimated cost of restoring or enhancing and maintaining the property shall not
12 exceed the projected mitigation credit value of the property minus land acquisition costs,
13 except where the applicant supplies additional funds acceptable to the Program for
14 restoration or enhancement and maintenance of the buffer;
- 15 (D) The property shall not contain any building, structure, object, site, or district that is listed
16 in the National Register of Historic Places established pursuant to Public Law 89-665, 16
17 U.S.C. 470 as amended;
- 18 (E) The property shall not contain any hazardous substance or solid waste such that water
19 quality could be adversely impacted, unless the hazardous substance or solid waste can be
20 properly remediated before the interest is transferred;
- 21 (F) The property shall not contain structures or materials that present health or safety
22 concerns to the general public. If wells, septic, water or sewer connections exist, they
23 shall be filled, remediated or closed at owner's expense in accordance with state and local
24 health and safety regulations before the interest is transferred. Sewer connections in
25 Zone 2 may be allowed for projects in accordance with Part (m)(2)(E) of this Rule;
- 26 (G) The property and adjacent properties shall not have prior, current, or known future land
27 use that would jeopardize the functions of the compensatory mitigation;
- 28 (H) The property shall not have any encumbrances or conditions that are inconsistent with the
29 requirements of this rule or purposes of the buffer rules;
- 30 (I) Fee simple title to the property or a perpetual conservation easement on the property shall
31 be donated to the State of North Carolina, a local government or a qualified holder under
32 N.C. General Statute 121-34 et seq. and 170(h) of the Internal Revenue Code as approved
33 by the Department and the donee; and
- 34 (J) The donation shall be accompanied by a non-wasting endowment or other financial
35 mechanism for perpetual maintenance and protection sufficient to ensure perpetual long-
36 term monitoring and maintenance, except that where a local government has donated a
37 perpetual conservation easement and has entered into a binding intergovernmental

1 agreement with the Program to manage and protect the property consistent with the terms
 2 of the perpetual conservation easement, such local government shall not be required to
 3 provide a non-wasting endowment.

4 (4) At the expense of the applicant or donor, the following information shall be submitted to the
 5 Program with any proposal for donations or dedications of interest in real property:

6 (A) Documentation that the property meets the requirements laid out in Subparagraph (l)(3)
 7 of this Rule;

8 (B) US Geological Survey 1:24,000 (7.5 minute) scale topographic map, county tax map,
 9 USDA Natural Resource Conservation Service County Soil Survey Map, and county road
 10 map showing the location of the property to be donated along with information on
 11 existing site conditions, vegetation types, presence of existing structures and easements;

12 (C) A current property survey performed in accordance with the procedures of the North
 13 Carolina Department of Administration, State Property Office as identified by the State
 14 Board of Registration for Professional Engineers and Land Surveyors in "Standards of
 15 Practice for Land Surveying in North Carolina." Copies may be obtained from the North
 16 Carolina State Board of Registration for Professional Engineers and Land Surveyors,
 17 3620 Six Forks Road, Suite 300, Raleigh, North Carolina 27609;

18 (D) A current appraisal of the value of the property performed in accordance with the
 19 procedures of the North Carolina Department of Administration, State Property Office as
 20 identified by the Appraisal Board in the "Uniform Standards of Professional North
 21 Carolina Appraisal Practice." Copies may be obtained from the Appraisal Foundation,
 22 Publications Department, P.O. Box 96734, Washington, D.C. 20090-6734; and

23 (E) A complete attorney's report on title with a title commitment for policy in the name of the
 24 State of North Carolina in the dollar amount of the appraised value.

25 (m) ALTERNATIVE BUFFER MITIGATION OPTIONS. Some or all of a buffer mitigation requirement may be
 26 met through any of the alternative mitigation options described in this Paragraph. Any proposal for alternative
 27 mitigation shall meet, in addition to the requirements of Paragraphs (c), (e), (f) and (g) of this Rule, the requirements
 28 set out in the Subparagraph addressing that option as well as the following requirements:

29 (1) Any proposal for alternative mitigation shall be provided in writing to the Division and shall meet
 30 the following content and procedural requirements for approval by the Division:

31 (A) Projects that have been constructed and are within the required monitoring period on the
 32 effective date of this Rule are eligible for use as alternative buffer mitigation. Projects
 33 that have completed monitoring and have been released by the Division on or before the
 34 effective date of this Rule are eligible for use as alternative buffer mitigation for a period
 35 of ten years from the effective date of this Rule;

1 (B) The mitigation area shall be placed under a perpetual conservation easement or similar
 2 legal protection mechanism to provide for protection of the property's nutrient removal
 3 and other water quality functions; and

4 (C) A completion bond that is payable to the Division sufficient to ensure that land purchase,
 5 construction, monitoring and maintenance are completed. A non-wasting endowment or
 6 other financial mechanism for perpetual maintenance and protection must be provided.

7 (2) ALTERNATIVE BUFFER MITIGATION – NON-STRUCTURAL, VEGETATIVE OPTIONS

8 (A) Coastal Headwater Stream Mitigation. Wooded buffers planted along Outer Coastal
 9 Plain headwater stream mitigation sites can be approved as riparian buffer mitigation as
 10 long as the site meets all applicable requirements of Paragraph (i) of this Rule. In
 11 addition, all success criteria including woody species, stem density, diffuse flow and
 12 stream success criteria specified by the Division in any required written approval of the
 13 site must be met. The area of the buffer shall be measured perpendicular to the length of
 14 the valley being restored. The area within the proposed buffer mitigation shall not also
 15 be used as wetland mitigation. Monitoring of the site must be for at least five years from
 16 the date of planting by providing annual reports for written Division approval.

17 (B) Buffer Restoration and Enhancement on Non-Subject Streams. Restoration or
 18 enhancement of buffers may be conducted on intermittent or perennial streams that are
 19 not subject to riparian buffer rules. These streams shall be confirmed as intermittent or
 20 perennial streams by Division staff using the Division publication, *Methodology for*
 21 *Identification of Intermittent and Perennial Streams and Their Origins* (v.4.11, 2010).
 22 The proposal shall meet all applicable requirements of Paragraph (i) of this Rule.

23 (C) Preservation of Buffer on Non-subject streams. Preservation of buffers on intermittent or
 24 perennial streams that are not subject to riparian buffer rules may be proposed in order
 25 to protect permanently the buffer from cutting, clearing, filling and grading and similar
 26 activities that would affect the functioning of the buffer. These streams shall be
 27 confirmed as intermittent or perennial streams by Division staff using the Division
 28 publication, *Methodology for Identification of Intermittent and Perennial Streams and*
 29 *Their Origins* (v.4.11, 2010). The preservation site shall meet the requirements of
 30 Subparagraph (i)(1), (i)(3), (i)(6) and Parts (I)(3)(D), (E), (F), (H) and (J) of this Rule.
 31 Preservation shall be proposed only when restoration or enhancement with an area at
 32 least equal to the footprint of the buffer impact has been proposed.

33 (D) Preservation of Buffers on Subject Streams. Buffer preservation may be proposed in
 34 order to permanently protect the buffer from cutting, clearing, filling and grading and
 35 similar activities that would affect the functioning of the buffer above and beyond the
 36 protection afforded by the existing buffer rules on sites that meet the definition of a
 37 preservation site along streams, estuaries or ponds that are subject to buffer rules. The

1 preservation site shall meet the requirements of Subparagraph (i)(1), (i)(3), (i)(6) and Part
2 (I)(3)(D), (E), (F), (H) and (J) of this Rule. Preservation shall be proposed only when
3 restoration or enhancement with an area at least equal to the footprint of the buffer impact
4 has been proposed.

5 (E) Sewer easement within the buffer. If the proposed mitigation site contains a sewer
6 easement in Zone 1, that portion of the sewer easement within Zone 1 is not suitable for
7 buffer mitigation. If the proposed mitigation site contains a sewer easement in Zone 2,
8 the portion of the sewer easement in Zone 2 may be suitable for buffer mitigation if the
9 applicant or mitigation provider restores or enhances the forested buffer in Zone 1
10 adjacent to the sewer easement, the sewer easement is at least 30 feet wide, the sewer
11 easement is required to be maintained in a condition which meets the vegetative
12 requirements of the collection system permit, and diffuse flow is provided across the
13 entire buffer width. The proposal shall meet all applicable requirements of Paragraph (i)
14 of this Rule for restoration or enhancement. The proposal shall meet all applicable
15 requirements of Part (m)(2)(C) of this Rule for preservation.

16 (F) Enhancement of grazing areas adjacent to streams. Buffer credit at a 2:1 ratio shall be
17 available for an applicant or mitigation provider who proposes permanent exclusion of
18 grazing livestock that otherwise degrade the stream and riparian zone through trampling,
19 grazing or waste deposition by fencing the livestock out of the stream and its adjacent
20 buffer. The applicant or mitigation provider shall provide an enhancement plan to the
21 standards identified in Paragraph (i). The applicant or mitigation provider shall
22 demonstrate that grazing was the predominant land use since the effective date of the
23 applicable buffer rule.

24 (G) Mitigation on ephemeral channels. For purposes of riparian buffer mitigation as
25 described in this Part, an ephemeral channel is defined as a natural channel exhibiting
26 discernible banks within a topographic crenulation (V-shaped contour lines) indicative of
27 natural drainage on the 1:24,000 scale (7.5 minute) quadrangle topographic map prepared
28 by the U.S. Geologic Survey or as seen on digital elevation models with contours
29 developed from the most recent available LiDAR data. Ephemeral channels only flow
30 for a short period of time after precipitation in the immediate area and do not have
31 periods of base flow sustained by groundwater discharge. The applicant or mitigation
32 provider shall provide a delineation of the watershed draining to the ephemeral channel.
33 The entire area proposed for mitigation must be within the contributing drainage area to
34 the ephemeral channel. The ephemeral channel must be directly connected to an
35 intermittent or perennial stream and contiguous with the rest of the mitigation site
36 protected under a perpetual conservation easement. The area of the mitigation site on
37 ephemeral channels shall comprise no more than 25% of the total area of mitigation. The

proposal shall meet all applicable requirements of Paragraph (i) of this Rule for restoration or enhancement. The proposal shall meet all applicable requirements of Part (m)(2)(C) of this Rule for preservation.

(H) Restoration and Enhancement on Ditches. For purposes of riparian buffer mitigation as described in this Part, a ditch is defined as a man-made channel other than a modified natural stream that was constructed for drainage purposes. To be used for mitigation, a ditch must meet all of the following criteria: the ditch must be directly connected with and draining towards an intermittent or perennial stream; the ditch must be contiguous with the rest of the mitigation site protected under a perpetual conservation easement; stormwater runoff from overland flow must drain towards the ditch; the ditch must be between 1 and 3 feet in depth; and the entire length of the ditch must have been in place prior to the effective date of the applicable buffer rule. The width of the restored or enhanced area shall not be less than 30 feet and shall not exceed 50 feet for crediting purposes. The applicant or mitigation provider shall provide a delineation of the watershed draining to the ditch. The watershed draining to the ditch shall be at least four times larger than the restored or enhanced area along the ditch. The perpetual conservation easement must include the ditch and the confluence of the ditch with the intermittent or perennial stream, and provide language that prohibits future maintenance of the ditch. The proposal shall meet all applicable requirements of Paragraph (i) of this Rule for restoration or enhancement.

(3) ALTERNATIVE BUFFER STORMWATER TREATMENT OPTIONS.

(A) For all structural options: Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer impact, and the remaining mitigation resulting from the multipliers can be met through structural options;

(B) Structural measures already required by other local, state or federal rule or permit cannot be used as alternative buffer mitigation, except to the extent such measure(s) exceed the requirements of such rule. Stormwater Best Management Practices (BMPs), including bioretention facilities, constructed wetlands, infiltration devices and sand filter are all potentially approvable (BMPs) for alternative buffer mitigation. Other BMPs may be approved only if they meet the nutrient removal levels outlined in Part (3)(C) of this Subparagraph. Existing or planned BMPs for a local, state or federal rule or permit may be retrofitted or expanded to improve their nutrient removal if this level of treatment would not be required by other local, state or federal rules. In this case, the predicted increase in nutrient removal may be counted toward alternative buffer mitigation;

(C) Minimum treatment levels: Any structural BMP shall provide at least 30% total nitrogen and 35% total phosphorus removal as demonstrated by a scientific and engineering literature review as approved by the Division. The mitigation proposal shall demonstrate

1 that the proposed alternative removes an equal or greater annual mass load of nutrients to
2 surface waters as the buffer impact authorized in the authorization certificate or variance,
3 following the calculation of impact and mitigation areas pursuant to Paragraphs (d), (e)
4 and (f) of this Rule. To estimate the rate of nutrient removal of the impacted buffer, the
5 applicant or mitigation provider shall use a method previously approved by the Division.
6 Alternatively, the applicant or mitigation provider may propose an alternative method of
7 estimating the rate of nutrient removal for consideration and review by the Division;

8 (D) All proposed structural BMPs shall follow the Division's 2009 Stormwater Best
9 Management Practice Design Manual. If a specific proposed structural BMP is not
10 addressed in this Manual, follow Chapter 20 in this Manual for approval;

11 (E) An operation and maintenance plan is required to be approved by the Division for all
12 structural options;

13 (F) Continuous and perpetual maintenance is required for all structural options and shall
14 follow the Division's 2009 Stormwater Best Management Practice Design Manual;

15 (G) Upon completion of construction, the designer for the type of BMP installed must certify
16 that the system was inspected during construction and was constructed in substantial
17 conformity with plans and specifications approved by the Division;

18 (H) Removal and replacement of structural options: If a structural option is proposed to be
19 removed and cannot be replaced on site, then a structural or non-structural measure of
20 equal or better nutrient removal capacity shall be constructed as a replacement with the
21 location as specified by Paragraph (f) and (g) of this Rule;

22 (I) Renovation or repair of structural options: If a structural option must be renovated or
23 repaired, it shall be renovated to provide equal or better nutrient removal capacity as
24 originally designed;

25 (J) Structural options as well as their operation and maintenance are the responsibility of the
26 landowner or easement holder unless the Division agrees in writing to operation and
27 maintenance by another responsible party. Structural options shall be located in recorded
28 drainage easements for the purposes of operation and maintenance and shall have
29 recorded access easements to the nearest public right-of-way. These easements shall be
30 granted in favor of the party responsible for operating and maintaining the structure, with
31 a note that operation and maintenance is the responsibility of the landowner, easement
32 holder or other responsible party; and

33 (K) Bonding and endowment. A completion bond that is payable to the Division sufficient to
34 ensure that land purchase, construction, monitoring and maintenance are completed and a
35 non-wasting endowment or other financial mechanism for perpetual maintenance and
36 protection must be provided.

1 (4) OTHER ALTERNATIVE BUFFER MITIGATION OPTIONS. Other riparian buffer mitigation
 2 options may be considered by the Division on a case-by-case basis after 30-day public notice
 3 through the Division's Water Quality Certification Mailing List in accordance with 15A NCAC
 4 02H .0503 as long as the options otherwise meet the requirements of this Rule. Division staff
 5 shall present recommendations to the Environmental Management Commission for a final
 6 decision with respect to any proposal for alternative buffer mitigation options not specified in this
 7 Rule.

8 (n) ACCOUNTING FOR BUFFER CREDIT, NUTRIENT OFFSET CREDIT AND STREAM MITIGATION
 9 CREDIT. Buffer mitigation credit, nutrient offset credit, wetland mitigation credit and stream mitigation credit shall
 10 be accounted for in accordance with the following:

- 11 (1) Buffer mitigation that is used for buffer mitigation credit cannot be used for nutrient offset credits;
 12 (2) Buffer mitigation or nutrient offset credit cannot be generated within wetlands that provide
 13 wetland mitigation credit required by 15A NCAC 02H .0506; and
 14 (3) Either buffer mitigation or nutrient offset credit may be generated on stream mitigation sites as
 15 long as the width of the restored or enhanced riparian buffer meets the requirements of
 16 Subparagraph (i)(1).

Attachment B

Stakeholder group's recommended rule text for 15A NCAC 02B .0295
showing all revisions to the OAH draft of the Approved Rule

1 **15A NCAC 02B .0295 MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND**
 2 **MAINTENANCE OF RIPARIAN BUFFERS**

3 (a) PURPOSE. The purpose of this Rule is to set forth the mitigation requirements that apply to applicants listed in
 4 Subparagraphs (1) and (2) of this Paragraph and to set forth requirements for buffer mitigation providers. Buffer
 5 mitigation is required when one of the following applies:

- 6 (1) The applicant has received an authorization certificate for impacts that cannot be avoided or
 7 practicably minimized pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243, 15A NCAC
 8 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607; or
 9 (2) The applicant has received a variance pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243,
 10 15A NCAC 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607
 11 and is required to perform mitigation as a condition of a variance approval.

12 (b) DEFINITIONS. For the purpose of this Rule, these terms shall be defined as follows:

- 13 (1) "Authority" means either the Division or a local government that has been delegated or designated
 14 to implement the riparian buffer program.
 15 (2) "Division" means the Division of Water ~~Quality Resources~~ of the North Carolina Department of
 16 Environment and Natural Resources.
 17 (3) "Enhancement Site" means a riparian zone site characterized by conditions between that of a
 18 restoration site and a preservation site such that the ~~planting-establishment~~ of woody stems (*i.e.*,
 19 ~~shrubs or saplings~~) ~~tree or shrub species~~ will maximize nutrient removal and other buffer
 20 functions.
 21 (4) "Hydrologic Area" means the Watershed Boundary Dataset (WBD), located at
 22 [http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-](http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-6DC7-4EC3-88A9-03E6B7D55653})
 23 [6DC7-4EC3-88A9-03E6B7D55653}](http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-6DC7-4EC3-88A9-03E6B7D55653}) using the eight-digit Hydrologic Unit Code (HUC) prepared
 24 by the United States Geological Survey.
 25 (5) "Locational Ratio" means the mitigation ratio applied to the mitigation requirements based on the
 26 location of the mitigation site relative to the impact site as set forth in Paragraph ~~(e)-(f)~~.
 27 (6) "Monitoring period" means the length of time specified in the approved mitigation plan during
 28 which monitoring of vegetation success and other anticipated benefits to the adjacent water as
 29 listed in the authorization certification is done.
 30 (7) "Non-wasting endowment" means a fund that generates enough interest to cover the cost of the
 31 long term monitoring and maintenance.
 32 ~~(8) "Off-site" means an area that is not located on the same parcel of land as the impact site.~~
 33 ~~(9) "On-site" means an area located on the same parcel of land as the impact site.~~
 34 ~~(10)~~(8) "Outer Coastal Plain" means the portion of the state shown as the Middle Atlantic Coastal Plain
 35 (63) on Griffith, *et al.* (2002) "Ecoregions of North and South Carolina." Reston, VA, United
 36 States Geological Survey.

1 ~~(11)~~ — "Physiographic province" means one of the four Level III ecoregions shown on Griffith, *et al.*
 2 ~~(2002)~~ "Ecoregions of North and South Carolina". Reston, VA, United States Geological Survey.

3 ~~(12)(9)~~ "Preservation Site" means riparian zone sites that are characterized by a natural forest consisting
 4 of the forest strata and diversity of species appropriate for the ~~physiographic province.~~ Omernik
 5 Level III ecoregion.

6 ~~(13)(10)~~ "Restoration Site" means riparian zone sites that are characterized by an absence of trees and by a
 7 lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings) or sites that are
 8 characterized by scattered individual trees such that the tree canopy is less than 25% of the cover
 9 and by a lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings).

10 ~~(11)~~ "Riparian buffer mitigation unit" means a unit representing a credit of riparian buffer mitigation
 11 that offsets one square foot of riparian buffer impact.

12 ~~(14)(12)~~ "Riparian wetland" means a wetland that is found in one or more of the following landscape
 13 positions: in a geomorphic floodplain; in a natural topographic crenulation; contiguous with an
 14 open water equal to or greater than 20 acres in size; or subject to tidal flow regimes excluding
 15 salt/brackish marsh wetlands.

16 ~~(15)(13)~~ "Urban" means an area that is designated as an urbanized area under the most recent federal
 17 decennial census or within the corporate limits of a municipality.

18 ~~(16)(14)~~ "Zonal Ratio" means the mitigation ratio applied to impact amounts in the respective zones of the
 19 riparian buffer as set forth in Paragraph (e).

20 (c) APPLICATION REQUIREMENTS, MITIGATION SITE REQUIREMENTS AND MITIGATION OPTIONS.

21 Any applicant who seeks approval to impact riparian buffers covered under this Rule who is required by Paragraph
 22 (a) shall submit to the Division a written mitigation proposal that calculates the required area of mitigation and
 23 describes the area and location of each type of proposed ~~mitigation,~~ mitigation. The applicant shall not impact
 24 buffers until the Division has approved the mitigation plan by issuance of written authorization. For all options
 25 except payment of a fee under Paragraphs ~~(h)(j)~~ or ~~(i)(k)~~ of this Rule, the proposal shall include a commitment to
 26 provide a perpetual conservation easement or similar legal protection mechanism to ensure perpetual stewardship
 27 that protects the mitigation site's nutrient removal and other water quality functions, a commitment to provide a non-
 28 wasting endowment or other financial mechanism for perpetual stewardship and protection, and a commitment to
 29 provide a completion bond that is payable to the Division sufficient to ensure that land or easement purchase,
 30 construction, monitoring and maintenance are completed. For each mitigation site, the Division shall identify
 31 functional criteria to measure the anticipated benefits of the mitigation to the adjacent water. The Division shall
 32 issue a mitigation determination that specifies the area, type and location of mitigation and the water quality benefits
 33 to be provided by the mitigation site. The mitigation determination issued according to this Rule shall be included
 34 as an attachment to the authorization certification. The applicant may propose any of the following types of
 35 mitigation and shall provide a written demonstration of practicality that takes into account the relative cost and
 36 availability of potential options, as well as information addressing all requirements associated with the option
 37 proposed:

- (1) Applicant provided ~~on-site or off-site~~ riparian buffer ~~restoration, restoration or~~ enhancement ~~or preservation~~ pursuant to Paragraph ~~(g)(i)~~ of this Rule;
- (2) Payment of a compensatory mitigation fee to a mitigation bank if buffer credits are available pursuant to Paragraph ~~(h)(j)~~ of this Rule or payment of a compensatory mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph ~~(i)(k)~~ of this Rule. Payment must conform to the requirements of G.S. 143-214.20;
- (3) Donation of real property or of an interest in real property pursuant to Paragraph ~~(j)(l)~~ of this Rule; or
- (4) Alternative buffer mitigation options pursuant to Paragraph ~~(k)(m)~~ of this Rule.

(d) AREA OF IMPACT. The authority shall determine the area of impact in square feet to each zone of the proposed riparian buffer impact by adding the following:

- (1) The area of the footprint of the use impacting the riparian buffer;
- (2) The area of the boundary of any clearing and grading activities within the riparian buffer necessary to accommodate the use;
- (3) The area of any ongoing maintenance corridors within the riparian buffer associated with the use; and
- (4) The authority shall deduct from this total the area of any wetlands that are subject to and compliant with riparian wetland mitigation requirements under 15A NCAC 02H .0506 and are located within the proposed riparian buffer impact area.

(e) AREA OF MITIGATION REQUIRED ON ZONAL MITIGATION RATIOS. The authority shall determine the required area of mitigation for each zone by applying each of the following ratios to the area of impact calculated under Paragraph (d) of this Rule:

<u>Basin/Watershed</u>	<u>Zone 1 Ratio</u>	<u>Zone 2 Ratio</u>
<u>Neuse River Basin (15A NCAC 02B .0233)</u>	<u>3:1</u>	<u>1.5:1</u>
<u>Catawba River Basin (15A NCAC 02B .0243)</u>	<u>2:1</u>	<u>1.5:1</u>
<u>Randleman Lake Watershed (15A NCAC 02B .0250)</u>	<u>3:1</u>	<u>1.5:1</u>
<u>Tar-Pamlico River Basin (15A NCAC 02B .0259)</u>	<u>3:1</u>	<u>1.5:1</u>
<u>Jordan Lake Watershed (15A NCAC 02B .0267)</u>	<u>3:1</u>	<u>1.5:1</u>
<u>Goose Creek Watershed (15A NCAC 02B .0607)</u>	<u>3:1^A</u>	

^A The Goose Creek Watershed does not have a Zone 1 and Zone 2. The mitigation ratio in the Goose Creek Watershed is 3:1 for the entire buffer.

~~(e)(f) AREA OF MITIGATION BASED-REQUIRED ON ZONAL AND-LOCATIONAL MITIGATION RATIOS. The authority shall determine the required area of mitigation for each zone by applying each of the following ratios to the area of impact calculated under Paragraph (d) of this Rule with a 3:1 ratio for Zone 1 and 1.5:1 ratio for Zone 2, except that the required area of mitigation for impacts proposed within the Goose Creek watershed is 3:1 for the entire buffer and the Catawba River watershed is 2:1 for Zone 1 and 1.5:1 for Zone 2, and:~~

~~(1) — In addition to the ratios listed above in this Paragraph, the applicant or mitigation provider must use the following locational ratios as applicable based on location of the proposed mitigation site relative to that of the proposed impact site. Mitigation options Locational ratios shall be available to applicants as follows:~~

<u>Location</u>	<u>Ratio</u>
<u>Within the 12-digit HUC^A</u>	<u>0.75:1</u>
<u>Within the eight-digit HUC^B</u>	<u>1:1</u>
<u>In the adjacent eight-digit HUC^{B, C}</u>	<u>2:1</u>

^A ~~Except within the Randleman Lake Watershed. Within the Randleman Lake Watershed the ratio is 1:1.~~

^B ~~Except as provided in Paragraph (g) of this Rule.~~

^C ~~To use mitigation in the adjacent eight-digit HUC, the applicant shall describe why buffer mitigation within the eight-digit HUC is not practical for the project.~~

~~(A) — On-site mitigation is 0.75:1 except within the Randleman Lake watershed which is 1:1;~~

~~(B) — Within the 12-digit HUC is 0.75:1 except within the Randleman Lake watershed which is 1:1;~~

~~(C) — Within the eight-digit HUC is 1:1 except as provided in Paragraph (f) of this Rule;~~

~~(D) — In the adjacent eight-digit HUC is 2:1 except as provided in Paragraph (f) of this Rule.~~

~~For use of Part (e)(1)(D) of this Rule, the applicant shall describe why buffer mitigation within the eight digit HUC is not practical for the project; and~~

~~(2) — Donation of property shall satisfy all the conditions of Paragraph (j) of this Rule.~~

~~(f)(g)~~ **GEOGRAPHIC RESTRICTIONS ON LOCATION OF MITIGATION.** Mitigation shall be performed in the same river basin in which the impact is located with the following additional specifications:

(1) In the following cases, mitigation shall be performed in the same watershed in which the impact is located:

(A) Falls Lake ~~Watershed; Watershed, as defined in Rule 15A NCAC 02B .0275;~~

(B) Goose Creek ~~Watershed; Watershed, as defined in Rule 15A NCAC 02B .0601;~~

(C) Randleman Lake Water Supply ~~Watershed; Watershed, as defined in Rule 15A NCAC 02B .0248;~~

(D) Each subwatershed of the Jordan Lake watershed, as defined in Rule 15A NCAC 02B .0262; and

(E) Other watersheds as specified in riparian buffer protection rules adopted by the Commission.

(2) Buffer mitigation for impacts within watersheds with riparian buffer rules that also have federally listed threatened or endangered aquatic species may be done within other watersheds with the same federally listed threatened or endangered aquatic species as long as the impacts are in the same river basin and same ~~physiographic province~~ **Omernik Level III ecoregion** as the mitigation site.

1 (h) RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation
 2 units as follows:

<u>Mitigation Activity</u>	<u>Square Feet of Mitigation Buffer</u>	<u>Riparian Buffer Mitigation Units Generated</u>
<u>Restoration</u>	<u>1</u>	<u>1</u>
<u>Enhancement</u>	<u>2</u>	<u>1</u>
<u>Preservation on Non-Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation on Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation on Non-Subject Rural Streams</u>	<u>5</u>	<u>1</u>
<u>Preservation on Subject Rural Streams</u>	<u>10</u>	<u>1</u>

3
 4 (g)(i) RIPARIAN BUFFER RESTORATION OR ENHANCEMENT. Division staff shall make an on-site
 5 determination as to whether a potential mitigation site qualifies as a restoration or enhancement site based on the
 6 applicable definition in Paragraph (b) of this Rule. ~~Persons who choose to meet their mitigation requirement~~
 7 through riparian ~~Riparian~~ buffer restoration or enhancement sites shall meet the following requirements:

- 8 (1) ~~The restoration area is equal to the required area of mitigation determined pursuant to Paragraph~~
 9 ~~(e) of this Rule.~~
- 10 (2) ~~The enhancement area is three times larger than the required area of mitigation determined~~
 11 ~~pursuant to Paragraph (e) of this Rule.~~
- 12 (1) ~~Buffer restoration or enhancement may be proposed as follows:~~

<u>Urban Areas</u>		<u>Non-Urban Areas</u>	
<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>	<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>
<u>Less than 20</u>	<u>0 %</u>	<u>Less than 20</u>	<u>0 %</u>
<u>20-29</u>	<u>75 %</u>	<u>20-29</u>	<u>0 %</u>
<u>30-100</u>	<u>100 %</u>	<u>30-100</u>	<u>100 %</u>
<u>101-200[^]</u>	<u>50 %[^]</u>	<u>101-200[^]</u>	<u>50 %[^]</u>

13 [^] The area of the mitigation site beyond 100 linear feet from the top of bank shall comprise no
 14 more than 10% of the total area of mitigation.

- 15 (3)(2) The location of the restoration or enhancement shall comply with the requirements of Paragraphs
 16 ~~(e) and (e), (f) and (g) of this Rule and; and in the Catawba watershed, buffer mitigation~~
- 17 (A) ~~For the Catawba River mainstem below Lake James, the width of the riparian buffer shall begin at~~
 18 ~~the top of the bank and extend landward a distance of 50 feet, measured horizontally on a line~~
 19 ~~perpendicular to a vertical line marking the edge of the top of the bank. For the mainstem lakes~~
 20 ~~located on the Catawba River mainstem, the width of the riparian buffer shall begin at the most~~
 21 ~~landward limit of the full pond level and extend landward a distance of 50 feet, measured~~
 22 ~~horizontally on a line perpendicular to a vertical line marking the edge of the full pond level.~~

1 ~~Buffer mitigation in the Catawba watershed~~ may be done along the lake shoreline as well as along
 2 intermittent and perennial stream channels throughout the ~~watershed;~~watershed.

3 ~~(B) — For the Goose Creek Watershed the riparian buffer restoration or enhancement site shall~~
 4 ~~have a minimum width of 50 feet as measured horizontally on a line perpendicular to a~~
 5 ~~vertical line marking the edge of the top of the bank and may include restoration or~~
 6 ~~enhancement of existing riparian areas, restoration or enhancement of streamside areas~~
 7 ~~along first order ephemeral streams that discharge or outlet into intermittent or perennial~~
 8 ~~streams, and preservation of the streamside area along first order ephemeral streams that~~
 9 ~~discharge or outlet into intermittent or perennial streams at a 5:1 ratio as long as there is~~
 10 ~~also an amount of restoration or enhancement equivalent to the amount of permitted~~
 11 ~~impact.~~

12 ~~(4)(3)~~ The mitigation site shall provide diffuseDiffuse flow ~~across the entire of runoff shall be maintained~~
 13 ~~in the riparian buffer.~~ buffer width. Any existing impervious cover or stormwater conveyances
 14 such as ditches, pipes or drain tiles shall be eliminated and the flow converted to diffuse flow. If
 15 elimination of existing stormwater conveyances is not feasible, then the applicant or mitigation
 16 provider shall provide a delineation of the watershed draining to the stormwater outfall and the
 17 percentage of the total drainage treated by the riparian buffer for Division approval; credit may be
 18 reduced proportionally.

19 ~~(5)(4)~~ The applicant or mitigation provider shall submit a restoration or enhancement plan for written
 20 approval by the Division. The restoration or enhancement plan shall demonstrate compliance with
 21 the requirements of Subparagraphs (1) through (3) of this Paragraph and shall contain the
 22 following in addition to elements required in Paragraph (c) of this Rule:

- 23 (A) A map of the proposed restoration or enhancement site;
- 24 (B) A vegetation plan that shall include a minimum of ~~five~~four native hardwood tree species
 25 or ~~five~~four native hardwood tree and native shrub species, where no one species is greater
 26 than 50% of ~~planted~~established stems, ~~planted~~established at a density sufficient to
 27 provide 260 stems per acre at the completion of monitoring. Native volunteer species
 28 may be included to meet performance standards. The Division may approve alternative
 29 ~~planting~~vegetation plans upon consideration of factors including site wetness and plant
 30 availability to meet the requirements of this Part;
- 31 (C) A grading plan (if applicable). The site shall be graded in a manner to ensure diffuse
 32 flow through the entire riparian buffer;
- 33 (D) A schedule for ~~implementation~~implementation, including a fertilization and herbicide
 34 plan if applicable;~~that will include protective measures to ensure that fertilizer and~~
 35 ~~herbicide is not deposited downstream from the site and will be applied per~~
 36 ~~manufacturers guidelines. Herbicides used must be certified by EPA for use in or near~~
 37 ~~aquatics sites and must be applied in accordance with the manufacturers' instructions; and~~

(E) A monitoring ~~plan-plan~~, including monitoring of vegetative success and other anticipated benefits to the adjacent water as listed in the Authorization Certification.

~~(6)(5)~~ Within one year after the Division has approved the restoration or enhancement plan, the applicant or mitigation provider shall present documentation to the Division that the riparian buffer has been restored or enhanced unless the Division agrees in writing to a longer time period due to the necessity for a longer construction period.

~~(7)(6)~~ The mitigation area shall be placed under a perpetual conservation easement or similar legal protection mechanism to provide for protection of the property's nutrient removal and other water quality functions.

~~(8)(7)~~ The applicant or mitigation provider shall submit written annual reports for a period of five years after the restoration or enhancement showing that the trees or ~~tree~~tree and shrub species planted are meeting success criteria and that diffuse flow through the riparian buffer has been maintained. The applicant or mitigation provider shall replace trees or shrubs and restore diffuse flow if needed during that five-year period. Additional years of monitoring may be required if the objectives under Paragraph ~~(g)(i)~~ have not been achieved at the end of the five-year monitoring ~~period, and period~~.

~~(8)~~ The mitigation provider shall provide a site specific credit/debit ledger to the Division at regular intervals once credits are established and until they are exhausted.

(9) A completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring and maintenance are completed. A non-wasting endowment or other financial mechanism for perpetual maintenance and protection must be provided.

~~(h)(j)~~ PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC MITIGATION BANK. Applicants who choose to satisfy some or all of their mitigation ~~determination~~ by purchasing mitigation credits from a private or public mitigation bank shall meet the following requirements:

- (1) The mitigation bank from which credits are purchased is listed on the Division's webpage (<http://portal.ncdenr.org/web/wq/swp/ws/401>) and shall have available riparian buffer credits;
- (2) The mitigation bank from which credits are purchased shall be located as described in Paragraphs ~~(e) and (e)~~, (f) and (g) of this Rule; and
- (3) After receiving a mitigation acceptance letter from the mitigation provider, proof of payment for the credits shall be provided to the ~~Department-Division~~ prior to any activity that results in the removal or degradation of the protected riparian buffer.

~~(h)(k)~~ PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND. Applicants who choose to satisfy some or all of their mitigation determination by paying a compensatory mitigation fee to the Riparian Buffer Restoration Fund shall meet the requirements of 15A NCAC 02B .0269 (Riparian Buffer Mitigation Fees to the NC Ecosystem Enhancement Program). Payment made to the NC Ecosystem Enhancement Program (the Program) shall be contingent upon acceptance of the payment to the Program. The financial, temporal and technical ability of the

1 Program to satisfy the mitigation request shall be considered to determine whether the Program shall accept or deny
2 the request.

3 ~~(1)~~ DONATION OF PROPERTY. Applicants who choose to satisfy their mitigation determination by donating
4 real property or an interest in real property in lieu of payment to fully or partially offset an approved payment into
5 the Riparian Buffer Restoration Fund pursuant to Paragraph (k) of this Rule shall meet the following requirements:

- 6 (1) ~~The donation of real property interests may be used to either partially or fully satisfy the payment~~
7 ~~of a compensatory mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph~~
8 ~~(i)(k) of this Rule.~~—The value of the property interest shall be determined by an appraisal
9 performed in accordance with Part ~~(i)(1)(4)(D)~~ of this Rule. The donation shall satisfy the
10 mitigation determination if the appraised value of the donated property interest is equal to or
11 greater than the required fee. If the appraised value of the donated property interest is less than the
12 required fee calculated pursuant to 15A NCAC 02B .0269, the applicant shall pay the remaining
13 balance due.
- 14 (2) The donation of ~~a conservation easement or similar legal protection mechanism that includes a~~
15 ~~non-wasting endowment or other financial mechanism for perpetual maintenance and protection to~~
16 ~~satisfy compensatory mitigation requirements shall be accepted only if it is granted in~~
17 ~~perpetuity.~~ real property interests shall be granted in perpetuity.
- 18 (3) Donation of real property interests to satisfy the full or partial payments under Paragraph (k)
19 ~~mitigation determination~~ shall be accepted only if such property meets all of the following
20 requirements:
- 21 (A) The property shall ~~contain riparian areas that are in need of restoration or enhancement~~
22 ~~rather than preservation;~~ be suitable for restoration or enhancement to successfully
23 produce viable riparian buffer compensatory mitigation credits in accordance with
24 Paragraph (i) of this Rule or the property shall be suitable for preservation to successfully
25 produce viable riparian buffer compensatory mitigation credits in accordance with Part
26 (m)(2)(C) of this Rule;
- 27 (B) — ~~For the Neuse and Tar-Pamlico basins, the Catawba River mainstem below Lake James,~~
28 ~~and the Randleman and Jordan watersheds, the restorable riparian buffer on the property~~
29 ~~shall begin at the top of the bank and extend landward a distance of 50 feet, measured~~
30 ~~horizontally on a line perpendicular to a vertical line marking the edge of the top of the~~
31 ~~bank. For the mainstem lakes located on the Catawba River mainstem, the width of the~~
32 ~~riparian buffer shall begin at the most landward limit of the full pond level and extend~~
33 ~~landward a distance of 50 feet, measured horizontally on a line perpendicular to a vertical~~
34 ~~line marking the edge of the full pond level. A minimum distance of less than 50 feet~~
35 ~~may be allowed only for projects in accordance with Part (k)(2)(D) of this Rule;~~
- 36 (C)~~(B)~~ The ~~size of the restorable riparian buffer on the property to be donated shall equal or~~
37 ~~exceed the acreage of riparian buffer required to be mitigated under the mitigation~~

responsibility determined pursuant to Paragraph (e) and (f) of this Rule. If the size of the restorable riparian buffer on the property to be donated is less than the acreage of riparian buffer required to be mitigated under the mitigation responsibility determined pursuant to Paragraph (e), (e) and (f), then the applicant shall satisfy the remaining balance by Subparagraph (e)(1) or (2) or a combination of (e)(1) and (2) of this Rule; property shall be located in an area where the Program can reasonably utilize the credits, based on historical or projected use, to offset compensatory mitigation requirements;

(D) — The property shall not have any impervious cover or stormwater conveyances such as ditches, pipes or drain tiles. If impervious cover or stormwater conveyances exist, they shall be eliminated and the flow converted to diffuse flow;

(E) — The property shall be suitable to be successfully restored, based on existing hydrology, soils, and vegetation;

(F)(C) The estimated cost of restoring or enhancing and maintaining the property shall not exceed the value of the property projected mitigation credit value of the property minus site identification and land acquisition costs, except where unless the applicant supplies financial assurance additional funds acceptable to the Division Program for restoration or enhancement and maintenance of the buffer;

(G)(D) The property shall not contain any building, structure, object, site, or district that is listed in the National Register of Historic Places established pursuant to Public Law 89-665, 16 U.S.C. 470 as amended;

(H)(E) The property shall not contain any hazardous substance or solid waste such that water quality could be adversely impacted, unless the hazardous substance or solid waste can be properly remediated before the interest is transferred;

(H)(F) The property shall not contain structures or materials that present health or safety concerns to the general public. If wells, septic, water or sewer connections exist, they shall be filled, remediated or closed at owner's expense in accordance with state and local health and safety regulations before the interest is transferred. Sewer connections in Zone 2 may be allowed for projects in accordance with Part ~~(k)(m)~~(2)(E) of this Rule;

(J)(G) The property and adjacent properties shall not have prior, current, or known future land use that would inhibit—jeopardize the function—functions of the restoration effort; compensatory mitigation;

(K)(H) The property shall not have any encumbrances or conditions that are inconsistent with the requirements of this rule or purposes of the buffer rules;

(L)(I) Fee simple title to the property or a perpetual conservation easement in-on the property shall be donated to the State of North ~~Carolina; and~~ Carolina, a local government or a qualified holder under N.C. General Statute 121-34 et seq. and 170(h) of the Internal Revenue Code as approved by the Department and the donee; and

~~(M)(J)~~ Upon completion of the buffer restoration or enhancement, the property or the easement shall be donated to a local land trust or to a local government or other state organization that will hold and enforce the conservation easement and its interests. The donation shall be accompanied by a non-wasting endowment or other financial mechanism for perpetual maintenance and protection sufficient to ensure perpetual long-term monitoring and maintenance, except that where a local government has donated a perpetual conservation easement and has entered into a binding intergovernmental agreement with the Division Program to manage and protect the property consistent with the terms of the perpetual conservation easement, such local government shall not be required to provide a non-wasting endowment.

(4) At the expense of the applicant or donor, the following information shall be submitted to the Division Program with any proposal for donations or dedications of interest in real property:

- (A) Documentation that the property meets the requirements laid out in Subparagraph ~~(j)(1)~~(3) of this Rule;
- (B) US Geological Survey 1:24,000 (7.5 minute) scale topographic map, county tax map, USDA Natural Resource Conservation Service County Soil Survey Map, and county road map showing the location of the property to be donated along with information on existing site conditions, vegetation types, presence of existing structures and easements;
- (C) A current property survey performed in accordance with the procedures of the North Carolina Department of Administration, State Property Office as identified by the State Board of Registration for Professional Engineers and Land Surveyors in "Standards of Practice for Land Surveying in North Carolina." Copies may be obtained from the North Carolina State Board of Registration for Professional Engineers and Land Surveyors, 3620 Six Forks Road, Suite 300, Raleigh, North Carolina 27609;
- (D) A current appraisal of the value of the property performed in accordance with the procedures of the North Carolina Department of Administration, State Property Office as identified by the Appraisal Board in the "Uniform Standards of Professional North Carolina Appraisal Practice." Copies may be obtained from the Appraisal Foundation, Publications Department, P.O. Box 96734, Washington, D.C. 20090-6734; and
- (E) A title certificate. A complete attorney's report on title with a title commitment for policy in the name of the State of North Carolina in the dollar amount of the appraised value.

~~(k)(m)~~ ALTERNATIVE BUFFER MITIGATION OPTIONS. Some or all of a buffer mitigation requirement may be met through any of the alternative mitigation options described in this Paragraph. Any proposal for alternative mitigation shall meet, in addition to the requirements of Paragraphs (c), ~~(e) and (e)~~, (f) and (g) of this Rule, the requirements set out in the Subparagraph addressing that option as well as the following requirements:

- (1) Any proposal for alternative mitigation shall be provided in writing to the Division and shall meet the following content and procedural requirements for approval by the Division:

~~(A) — Demonstration of no practical alternative. The application shall describe why traditional buffer mitigation options are not practical for the project;~~

~~(B)~~(A) Projects that have been constructed and are within the required monitoring period on the effective date of this Rule are eligible for use as alternative buffer mitigation. Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule;

~~(C)~~(B) The mitigation area shall be placed under a perpetual conservation easement or similar legal protection mechanism to provide for protection of the property's nutrient removal and other water quality functions; and

~~(D)~~(C) A completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring and maintenance are completed. A non-wasting endowment or other financial mechanism for perpetual maintenance and protection must be provided.

(2) ALTERNATIVE BUFFER MITIGATION – NON-STRUCTURAL, VEGETATIVE OPTIONS

(A) Coastal Headwater Stream Mitigation. Wooded buffers planted along Outer Coastal Plain headwater stream mitigation sites can be approved as riparian buffer mitigation as long as the site meets all applicable requirements of Paragraph ~~(g)~~(i) of this Rule. In addition, all success criteria including ~~tree~~woody species, ~~tree~~stem density, diffuse flow and stream success criteria specified by the Division in any required written approval of the site must be met. The area of the buffer shall be measured perpendicular to the length of the valley being restored. The area within the proposed buffer mitigation shall not also be used as wetland mitigation. Monitoring of the site must be for at least five years from the date of planting by providing annual reports for written ~~DWQ—Division approval;approval.~~

(B) Buffer ~~Mitigation-Restoration and Enhancement~~ on Non-Subject Streams. Restoration or enhancement of buffers may be conducted on intermittent or perennial streams that are not subject to riparian buffer rules. These streams shall be confirmed as intermittent or perennial streams by Division staff ~~or staff from a local delegated program~~ using the Division publication, *Methodology for Identification of Intermittent and Perennial Streams and Their Origins* (v.4.11, 2010). The proposal shall meet all applicable requirements of Paragraph ~~(g)~~(i) of this Rule.

~~(C) Preservation of Buffer on Non-subject streams.~~ Preservation of ~~these stream~~ buffers on intermittent or perennial streams that are not subject to riparian buffer rules may be proposed in order to protect permanently the buffer from cutting, clearing, filling and grading and similar activities that would affect the functioning of the buffer. These streams shall be confirmed as intermittent or perennial streams by Division staff using the Division publication, *Methodology for Identification of Intermittent and Perennial*

Streams and Their Origins (v.4.11, 2010). The preservation site shall protect at least a 50 foot wide forested riparian buffer and shall meet the requirements of Subparagraph (i)(1), (i)(3), (j)(2)(i)(6) and Parts (j)(1)(3)(D), (G), (H), (I), (K)(E), (F), (H) and (M)(J) of this Rule. Preservation shall be proposed only when restoration or enhancement with an area at least equal to the footprint of the buffer impact has been proposed. ~~The preservation area shall be five times larger than the required area of mitigation determined pursuant to Paragraph (e) of this Rule that is not satisfied through restoration or enhancement;~~

~~(C)(D)~~ Preservation of Buffers on Subject Streams. Buffer preservation may be proposed in order to permanently protect ~~permanently~~ the buffer from cutting, clearing, filling and grading and similar activities that would affect the functioning of the buffer above and beyond the protection afforded by the existing buffer rules on sites that meet the definition of a preservation site along streams, estuaries or ponds that are subject to buffer rules. The preservation site shall meet the requirements of Subparagraph (i)(1), (i)(3), (j)(2)(i)(6) and Part (j)(1)(3)(D), (G), (H), (I), (K)(E), (F), (H) and (M)(J) of this Rule. Preservation shall be proposed only when restoration or enhancement with an area at least equal to the footprint of the buffer impact has been proposed. ~~The preservation area shall be ten times larger in non-urban areas and three times larger in urban areas than the required area of mitigation determined pursuant to Paragraph (e) of this Rule that is not satisfied through restoration or enhancement. Reduced buffer mitigation credit can be given per Part (k)(2)(D) of this Rule in urban areas;~~

~~(D) — Narrower buffers on urban streams. Buffer restoration or enhancement with widths less than 50 feet may be proposed along urban streams. If buffer widths between 30 and 50 feet are proposed and on-site stormwater management is provided to control local sources of nutrients and other pollutants, then full buffer credit shall be awarded for the area of buffer restored or enhanced. A total of 75% of full credit shall be awarded for buffers between 20 and 30 feet wide if on-site stormwater management is provided to control local sources of nutrients and other pollutants. If on-site stormwater management is not provided, then 50% of full credit shall be provided for buffers between 30 and 50 feet wide and 25% of full credit for buffers between 20 and 30 feet wide. Buffers less than 20 feet wide shall receive no buffer credit regardless of whether on-site stormwater management is provided;~~

(E) Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in Zone 1, that portion of the sewer easement within Zone 1 is not suitable for buffer mitigation. If the proposed mitigation site contains a sewer easement in Zone 2, the portion of the sewer easement in Zone 2 may be suitable for buffer mitigation if the applicant or mitigation provider restores or enhances the forested buffer in Zone 1 adjacent to the sewer easement, the sewer easement is at least 30 feet wide, the sewer

1 easement is required to be maintained in a condition which meets the vegetative
 2 requirements of the collection system permit, and diffuse flow is provided across the
 3 entire buffer ~~width; width~~. The proposal shall meet all applicable requirements of
 4 Paragraph (i) of this Rule for restoration or enhancement. The proposal shall meet all
 5 applicable requirements of Part (m)(2)(C) of this Rule for preservation.

6 (F) Enhancement of grazing areas adjacent to streams. Buffer credit at a 2:1 ratio shall be
 7 available for an applicant or mitigation provider who proposes permanent exclusion of
 8 grazing livestock that otherwise degrade the stream and riparian zone through trampling,
 9 grazing or waste deposition by fencing the livestock out of the stream and its adjacent
 10 buffer. The applicant or mitigation provider shall provide an enhancement plan to the
 11 standards identified in Paragraph ~~(g)~~(i). The applicant or mitigation provider shall
 12 demonstrate that grazing was the predominant land use since the effective date of the
 13 applicable buffer rule.

14 (G) Mitigation on ephemeral channels. For purposes of riparian buffer mitigation as
 15 described in this Part, an ephemeral channel is defined as a natural channel exhibiting
 16 discernible banks within a topographic crenulation (V-shaped contour lines) indicative of
 17 natural drainage on the 1:24,000 scale (7.5 minute) quadrangle topographic map prepared
 18 by the U.S. Geologic Survey or as seen on digital elevation models with contours
 19 developed from the most recent available LiDAR data. Ephemeral channels only flow
 20 for a short period of time after precipitation in the immediate area and do not have
 21 periods of base flow sustained by groundwater discharge. The applicant or mitigation
 22 provider shall provide a delineation of the watershed draining to the ephemeral channel.
 23 The entire area proposed for mitigation must be within the contributing drainage area to
 24 the ephemeral channel. The ephemeral channel must be directly connected to an
 25 intermittent or perennial stream and contiguous with the rest of the mitigation site
 26 protected under a perpetual conservation easement. The area of the mitigation site on
 27 ephemeral channels shall comprise no more than 25% of the total area of mitigation. The
 28 proposal shall meet all applicable requirements of Paragraph (i) of this Rule for
 29 restoration or enhancement. The proposal shall meet all applicable requirements of Part
 30 (m)(2)(C) of this Rule for preservation.

31 (H) Restoration and Enhancement on Ditches. For purposes of riparian buffer mitigation as
 32 described in this Part, a ditch is defined as a man-made channel other than a modified
 33 natural stream that was constructed for drainage purposes. To be used for mitigation, a
 34 ditch must meet all of the following criteria: the ditch must be directly connected with
 35 and draining towards an intermittent or perennial stream; the ditch must be contiguous
 36 with the rest of the mitigation site protected under a perpetual conservation easement;
 37 stormwater runoff from overland flow must drain towards the ditch; the ditch must be

between 1 and 3 feet in depth; and the entire length of the ditch must have been in place prior to the effective date of the applicable buffer rule. The width of the restored or enhanced area shall not be less than 30 feet and shall not exceed 50 feet for crediting purposes. The applicant or mitigation provider shall provide a delineation of the watershed draining to the ditch. The watershed draining to the ditch shall be at least four times larger than the restored or enhanced area along the ditch. The perpetual conservation easement must include the ditch and the confluence of the ditch with the intermittent or perennial stream, and provide language that prohibits future maintenance of the ditch. The proposal shall meet all applicable requirements of Paragraph (i) of this Rule for restoration or enhancement.

(3) ALTERNATIVE BUFFER STORMWATER TREATMENT OPTIONS.

- (A) For all structural options: Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer impact, and the remaining mitigation resulting from the multipliers can be met through structural options;
- (B) Structural measures already required by other local, state or federal rule or permit cannot be used as alternative buffer mitigation, except to the extent such measure(s) exceed the requirements of such rule. Stormwater Best Management Practices (BMPs), including bioretention facilities, constructed wetlands, infiltration devices and sand filter are all potentially approvable (BMPs) for alternative buffer mitigation. Other BMPs may be approved only if they meet the nutrient removal levels outlined in Part (3)(C) of this Subparagraph. Existing or planned BMPs for a local, state or federal rule or permit may be retrofitted or expanded to improve their nutrient removal if this level of treatment would not be required by other local, state or federal rules. In this case, the predicted increase in nutrient removal may be counted toward alternative buffer mitigation;
- (C) Minimum treatment levels: Any structural BMP shall provide at least 30% total nitrogen and 35% total phosphorus removal as demonstrated by a scientific and engineering literature review as approved by the Division. The ~~application mitigation proposal~~ shall demonstrate that the proposed alternative removes an equal or greater annual mass load of nutrients to surface waters as the buffer impact authorized in the authorization certificate or variance, following the calculation of impact and mitigation areas pursuant to Paragraphs ~~(d) and (d)~~, (e) and (f) of this Rule. To estimate the rate of nutrient removal of the impacted buffer, the applicant or mitigation provider shall use a method previously approved by the Division. Alternatively, the applicant or mitigation provider may propose an alternative method of estimating the rate of nutrient removal for consideration and review by the Division;

- 1 (D) All proposed structural BMPs shall follow the Division's 2009 Stormwater Best
 2 Management Practice Design Manual. If a specific proposed structural BMP is not
 3 addressed in this Manual, follow Chapter 20 in this Manual for approval;
- 4 (E) An operation and maintenance plan is required to be approved by the Division for all
 5 structural options;
- 6 (F) Continuous and perpetual maintenance is required for all structural options and shall
 7 follow the Division's 2009 Stormwater Best Management Practice Design Manual;
- 8 (G) Upon completion of construction, the designer for the type of BMP installed must certify
 9 that the system was inspected during construction and was constructed in substantial
 10 conformity with plans and specifications approved by the Division;~~Annual reports shall~~
 11 ~~be sent in writing to the Division of Water Quality concerning operation and maintenance~~
 12 ~~of all structural options approved under this Rule;~~
- 13 (H) Removal and replacement of structural options: If a structural option is proposed to be
 14 removed and cannot be replaced on site, then a structural or non-structural measure of
 15 equal or better nutrient removal capacity shall be constructed as a replacement with the
 16 location as specified by Paragraph ~~(e)~~(f) and (g) of this Rule;
- 17 (I) Renovation or repair of structural options: If a structural option must be renovated or
 18 repaired, it shall be renovated to provide equal or better nutrient removal capacity as
 19 originally designed;
- 20 (J) Structural options as well as their operation and maintenance are the responsibility of the
 21 landowner or easement holder unless the Division agrees in writing to operation and
 22 maintenance by another responsible party. Structural options shall be located in recorded
 23 drainage easements for the purposes of operation and maintenance and shall have
 24 recorded access easements to the nearest public right-of-way. These easements shall be
 25 granted in favor of the party responsible for operating and maintaining the structure, with
 26 a note that operation and maintenance is the responsibility of the landowner, easement
 27 holder or other responsible party; and
- 28 (K) Bonding and endowment. A completion bond that is payable to the Division sufficient to
 29 ensure that land purchase, construction, monitoring and maintenance are completed and a
 30 non-wasting endowment or other financial mechanism for perpetual maintenance and
 31 protection must be provided.
- 32 (4) OTHER ALTERNATIVE BUFFER MITIGATION OPTIONS. Other riparian buffer mitigation
 33 options may be considered by the Division on a case-by-case basis after 30-day public notice
 34 through the Division's Water Quality Certification Mailing List in accordance with 15A NCAC
 35 02H .0503 as long as the options otherwise meet the requirements of this Rule. Division staff
 36 shall present recommendations to the Environmental Management Commission for a final

1 decision with respect to any proposal for alternative buffer mitigation options not specified in this
 2 Rule.

3 ~~(4)(n)~~ ACCOUNTING FOR BUFFER CREDIT, NUTRIENT OFFSET CREDIT AND STREAM MITIGATION
 4 CREDIT. Buffer mitigation credit, nutrient offset credit, wetland mitigation credit and stream mitigation credit shall
 5 be accounted for in accordance with the following:

- 6 (1) Buffer mitigation that is used for buffer mitigation credit cannot be used for nutrient offset credits;
 7 (2) Buffer mitigation or nutrient offset credit cannot be generated within wetlands that provide
 8 wetland mitigation credit required by 15A NCAC 02H .0506; and
 9 (3) Either buffer mitigation or nutrient offset credit may be generated on stream mitigation sites as
 10 long as the width of the restored or enhanced riparian buffer ~~is at least 50 feet.~~meets the
 11 requirements of Subparagraph (i)(1).

Attachment C

OAH draft of the Approved rule

Rule following RRC approval in July 2014.

15A NCAC 02B .0295 MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND MAINTENANCE OF RIPARIAN BUFFERS

(a) **PURPOSE.** The purpose of this Rule is to set forth the mitigation requirements that apply to applicants listed in Subparagraphs (1) and (2) of this Paragraph and to set forth requirements for buffer mitigation providers. Buffer mitigation is required when one of the following applies:

- (1) The applicant has received an authorization certificate for impacts that cannot be avoided or practicably minimized pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243, 15A NCAC 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607; or
- (2) The applicant has received a variance pursuant to 15A NCAC 02B .0233, 15A NCAC 02B .0243, 15A NCAC 02B .0250, 15A NCAC 02B .0259, 15A NCAC 02B .0267 or 15A NCAC 02B .0607 and is required to perform mitigation as a condition of a variance approval.

(b) **DEFINITIONS.** For the purpose of this Rule, these terms shall be defined as follows:

- (1) "Authority" means either the Division or a local government that has been delegated or designated to implement the riparian buffer program.
- (2) "Division" means the Division of Water Quality of the North Carolina Department of Environment and Natural Resources.
- (3) "Enhancement Site" means a riparian zone site characterized by conditions between that of a restoration site and a preservation site such that the planting of woody stems (*i.e.*, shrubs or saplings) will maximize nutrient removal and other buffer functions.
- (4) "Hydrologic Area" means the Watershed Boundary Dataset (WBD), located at <http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-6DC7-4EC3-88A9-03E6B7D55653}> using the eight-digit Hydrologic Unit Code (HUC) prepared by the United States Geological Survey.
- (5) "Locational Ratio" means the mitigation ratio applied to the mitigation requirements based on the location of the mitigation site relative to the impact site as set forth in Paragraph (e).
- (6) "Monitoring period" means the length of time specified in the approved mitigation plan during which monitoring of vegetation success and other anticipated benefits to the adjacent water as listed in the authorization certification is done.
- (7) "Non-wasting endowment" means a fund that generates enough interest to cover the cost of the long term monitoring and maintenance.
- (8) "Off-site" means an area that is not located on the same parcel of land as the impact site.
- (9) "On-site" means an area located on the same parcel of land as the impact site.
- (10) "Outer Coastal Plain" means the portion of the state shown as the Middle Atlantic Coastal Plain (63) on Griffith, *et al.* (2002) "Ecoregions of North and South Carolina." Reston, VA, United States Geological Survey.
- (11) "Physiographic province" means one of the four Level III ecoregions shown on Griffith, *et al.* (2002) "Ecoregions of North and South Carolina." Reston, VA, United States Geological Survey.
- (12) "Preservation Site" means riparian zone sites that are characterized by a natural forest consisting of the forest strata and diversity of species appropriate for the physiographic province.
- (13) "Restoration Site" means riparian zone sites that are characterized by an absence of trees and by a lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings) or sites that are characterized by scattered individual trees such that the tree canopy is less than 25% of the cover and by a lack of dense growth of smaller woody stems (*i.e.*, shrubs or saplings).
- (14) "Riparian wetland" means a wetland that is found in one or more of the following landscape positions: in a geomorphic floodplain; in a natural topographic crenulation; contiguous with an open water equal to or greater than 20 acres in size; or subject to tidal flow regimes excluding salt/brackish marsh wetlands.
- (15) "Urban" means an area that is designated as an urbanized area under the most recent federal decennial census or within the corporate limits of a municipality.
- (16) "Zonal Ratio" means the mitigation ratio applied to impact amounts in the respective zones of the riparian buffer as set forth in Paragraph (e).

(c) **APPLICATION REQUIREMENTS, MITIGATION SITE REQUIREMENTS AND MITIGATION OPTIONS.** Any applicant who seeks approval to impact riparian buffers covered under this Rule who is required by Paragraph (a) shall submit to the Division a written mitigation proposal that calculates the required area of mitigation and describes the area and location of each type of proposed mitigation. The applicant shall not impact buffers until the Division has approved the mitigation plan by issuance of written authorization. For all options except payment of a

fee under Paragraphs (h) or (i) of this Rule, the proposal shall include a commitment to provide a conservation easement or similar legal protection mechanism to ensure perpetual stewardship that protects the mitigation site's nutrient removal and other water quality functions, a commitment to provide a non-wasting endowment or other financial mechanism for perpetual stewardship and protection, and a commitment to provide a completion bond that is payable to the Division sufficient to ensure that land or easement purchase, construction, monitoring and maintenance are completed. For each mitigation site, the Division shall identify functional criteria to measure the anticipated benefits of the mitigation to the adjacent water. The Division shall issue a mitigation determination that specifies the area, type and location of mitigation and the water quality benefits to be provided by the mitigation site. The mitigation determination issued according to this Rule shall be included as an attachment to the authorization certification. The applicant may propose any of the following types of mitigation and shall provide a written demonstration of practicality that takes into account the relative cost and availability of potential options, as well as information addressing all requirements associated with the option proposed:

- (1) Applicant provided on-site or off-site riparian buffer restoration, enhancement or preservation pursuant to Paragraph (g) of this Rule;
 - (2) Payment of a compensatory mitigation fee to a mitigation bank if buffer credits are available pursuant to Paragraph (h) of this Rule or payment of a compensatory mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph (i) of this Rule. Payment must conform to the requirements of G.S. 143-214.20;
 - (3) Donation of real property or of an interest in real property pursuant to Paragraph (j) of this Rule; or
 - (4) Alternative buffer mitigation options pursuant to Paragraph (k) of this Rule.
- (d) AREA OF IMPACT. The authority shall determine the area of impact in square feet to each zone of the proposed riparian buffer impact by adding the following:
- (1) The area of the footprint of the use impacting the riparian buffer;
 - (2) The area of the boundary of any clearing and grading activities within the riparian buffer necessary to accommodate the use;
 - (3) The area of any ongoing maintenance corridors within the riparian buffer associated with the use; and
 - (4) The authority shall deduct from this total the area of any wetlands that are subject to and compliant with riparian wetland mitigation requirements under 15A NCAC 02H .0506 and are located within the proposed riparian buffer impact area.

(e) AREA OF MITIGATION BASED ON ZONAL AND LOCATIONAL MITIGATION RATIOS. The authority shall determine the required area of mitigation for each zone by applying each of the following ratios to the area of impact calculated under Paragraph (d) of this Rule with a 3:1 ratio for Zone 1 and 1.5:1 ratio for Zone 2, except that the required area of mitigation for impacts proposed within the Goose Creek watershed is 3:1 for the entire buffer and the Catawba River watershed is 2:1 for Zone 1 and 1.5:1 for Zone 2, and:

- (1) In addition to the ratios listed above in this Paragraph, the applicant or mitigation provider must use the following locational ratios as applicable based on location of the proposed mitigation site relative to that of the proposed impact site. Mitigation options shall be available to applicants as follows:
 - (A) On-site mitigation is 0.75:1 except within the Randleman Lake watershed which is 1:1;
 - (B) Within the 12-digit HUC is 0.75:1 except within the Randleman Lake watershed which is 1:1;
 - (C) Within the eight-digit HUC is 1:1 except as provided in Paragraph (f) of this Rule;
 - (D) In the adjacent eight-digit HUC is 2:1 except as provided in Paragraph (f) of this Rule.

For use of Part (e)(1)(D) of this Rule, the applicant shall describe why buffer mitigation within the 8 digit HUC is not practical for the project; and

- (2) Donation of property shall satisfy all the conditions of Paragraph (j) of this Rule.

(f) GEOGRAPHIC RESTRICTIONS ON LOCATION OF MITIGATION. Mitigation shall be performed in the same river basin in which the impact is located with the following additional specifications:

- (1) In the following cases, mitigation shall be performed in the same watershed in which the impact is located:
 - (A) Falls Lake Watershed;
 - (B) Goose Creek Watershed;
 - (C) Randleman Lake Water Supply Watershed;

- (D) Each subwatershed of the Jordan Lake watershed, as defined in Rule 15A NCAC 02B .0262; and
 - (E) Other watersheds as specified in riparian buffer protection rules adopted by the Commission.
- (2) Buffer mitigation for impacts within watersheds with riparian buffer rules that also have federally listed threatened or endangered aquatic species may be done within other watersheds with the same federally listed threatened or endangered aquatic species as long as the impacts are in the same river basin and same physiographic province as the mitigation site.
- (g) RIPARIAN BUFFER RESTORATION OR ENHANCEMENT. Division staff shall make an on-site determination as to whether a potential mitigation site qualifies as a restoration or enhancement site based on the applicable definition in Paragraph (b) of this Rule. Persons who choose to meet their mitigation requirement through riparian buffer restoration or enhancement shall meet the following requirements:
- (1) The restoration area is equal to the required area of mitigation determined pursuant to Paragraph (e) of this Rule.
 - (2) The enhancement area is three times larger than the required area of mitigation determined pursuant to Paragraph (e) of this Rule.
 - (3) The location of the restoration or enhancement shall comply with the requirements of Paragraphs (e) and (f) of this Rule and:
 - (A) For the Catawba River mainstem below Lake James, the width of the riparian buffer shall begin at the top of the bank and extend landward a distance of 50 feet, measured horizontally on a line perpendicular to a vertical line marking the edge of the top of the bank. For the mainstem lakes located on the Catawba River mainstem, the width of the riparian buffer shall begin at the most landward limit of the full pond level and extend landward a distance of 50 feet, measured horizontally on a line perpendicular to a vertical line marking the edge of the full pond level. Buffer mitigation in the Catawba watershed may be done along the lake shoreline as well as along intermittent and perennial stream channels throughout the watershed;
 - (B) For the Goose Creek Watershed the riparian buffer restoration or enhancement site shall have a minimum width of 50 feet as measured horizontally on a line perpendicular to a vertical line marking the edge of the top of the bank and may include restoration or enhancement of existing riparian areas, restoration or enhancement of streamside areas along first order ephemeral streams that discharge or outlet into intermittent or perennial streams, and preservation of the streamside area along first order ephemeral streams that discharge or outlet into intermittent or perennial streams at a 5:1 ratio as long as there is also an amount of restoration or enhancement equivalent to the amount of permitted impact.
 - (4) The mitigation site shall provide diffuse flow across the entire buffer width. Any existing impervious cover or stormwater conveyances such as ditches, pipes or drain tiles shall be eliminated and the flow converted to diffuse flow.
 - (5) The applicant or mitigation provider shall submit a restoration or enhancement plan for written approval by the Division. The restoration or enhancement plan shall demonstrate compliance with the requirements of Subparagraphs (1) through (3) of this Paragraph and shall contain the following in addition to elements required in Paragraph (c) of this Rule:
 - (A) A map of the proposed restoration or enhancement site;
 - (B) A vegetation plan that shall include a minimum of five native hardwood tree species or five native hardwood tree and native shrub species, where no one species is greater than 50% of planted stems, planted at a density sufficient to provide 260 stems per acre at the completion of monitoring. The Division may approve alternative planting plans upon consideration of factors including site wetness and plant availability to meet the requirements of this Part;
 - (C) A grading plan (if applicable). The site shall be graded in a manner to ensure diffuse flow through the entire riparian buffer;
 - (D) A schedule for implementation including a fertilization and herbicide plan that will include protective measures to ensure that fertilizer and herbicide is not deposited downstream from the site and will be applied per manufacturers guidelines. Herbicides

used must be certified by EPA for use in or near aquatics sites and must be applied in accordance with the manufacturers' instructions; and

- (E) A monitoring plan including monitoring of vegetative success and other anticipated benefits to the adjacent water as listed in the Authorization Certification.
 - (6) Within one year after the Division has approved the restoration or enhancement plan, the applicant or mitigation provider shall present documentation to the Division that the riparian buffer has been restored or enhanced unless the Division agrees in writing to a longer time period due to the necessity for a longer construction period.
 - (7) The mitigation area shall be placed under a perpetual conservation easement or similar legal protection mechanism to provide for protection of the property's nutrient removal and other water quality functions.
 - (8) The applicant or mitigation provider shall submit written annual reports for a period of five years after the restoration or enhancement showing that the trees or trees and shrub species planted are meeting success criteria and that diffuse flow through the riparian buffer has been maintained. The applicant shall replace trees or shrubs and restore diffuse flow if needed during that five-year period. Additional years of monitoring may be required if the objectives under Paragraph (g) have not been achieved at the end of the five-year monitoring period, and
 - (9) A completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring and maintenance are completed. A non-wasting endowment or other financial mechanism for perpetual maintenance and protection must be provided.
- (h) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC MITIGATION BANK. Applicants who choose to satisfy some or all of their mitigation determination by purchasing mitigation credits from a private or public mitigation bank shall meet the following requirements:
- (1) The mitigation bank from which credits are purchased is listed on the Division's webpage (<http://portal.ncdenr.org/web/wq/swp/ws/401>) and shall have available riparian buffer credits;
 - (2) The mitigation bank from which credits are purchased shall be located as described in Paragraphs (e) and (f) of this Rule; and
 - (3) After receiving a mitigation acceptance letter from the mitigation provider, proof of payment for the credits shall be provided to the Department prior to any activity that results in the removal or degradation of the protected riparian buffer.
- (i) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND. Applicants who choose to satisfy some or all of their mitigation determination by paying a compensatory mitigation fee to the Riparian Buffer Restoration Fund shall meet the requirements of 15A NCAC 02B .0269 (Riparian Buffer Mitigation Fees to the NC Ecosystem Enhancement Program). Payment made to the NC Ecosystem Enhancement Program (the Program) shall be contingent upon acceptance of the payment to the Program. The financial, temporal and technical ability of the Program to satisfy the mitigation request shall be considered to determine whether the Program shall accept or deny the request.
- (j) DONATION OF PROPERTY. Applicants who choose to satisfy their mitigation determination by donating real property or an interest in real property in lieu of payment shall meet the following requirements:
- (1) The donation of real property interests may be used to either partially or fully satisfy the payment of a compensatory mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph (i) of this Rule. The value of the property interest shall be determined by an appraisal performed in accordance with Part (j)(4)(D) of this Rule. The donation shall satisfy the mitigation determination if the appraised value of the donated property interest is equal to or greater than the required fee. If the appraised value of the donated property interest is less than the required fee calculated pursuant to 15A NCAC 02B .0269, the applicant shall pay the remaining balance due.
 - (2) The donation of a conservation easement or similar legal protection mechanism that includes a non-wasting endowment or other financial mechanism for perpetual maintenance and protection to satisfy compensatory mitigation requirements shall be accepted only if it is granted in perpetuity.
 - (3) Donation of real property interests to satisfy the mitigation determination shall be accepted only if such property meets all of the following requirements:
 - (A) The property shall contain riparian areas that are in need of restoration or enhancement rather than preservation;
 - (B) For the Neuse and Tar-Pamlico basins, the Catawba River mainstem below Lake James, and the Randleman and Jordan watersheds, the restorable riparian buffer on the property shall begin at the top of the bank and extend landward a distance of 50 feet, measured

horizontally on a line perpendicular to a vertical line marking the edge of the top of the bank. For the mainstem lakes located on the Catawba River mainstem, the width of the riparian buffer shall begin at the most landward limit of the full pond level and extend landward a distance of 50 feet, measured horizontally on a line perpendicular to a vertical line marking the edge of the full pond level. A minimum distance of less than 50 feet may be allowed only for projects in accordance with Part (k)(2)(D) of this Rule;

- (C) The size of the restorable riparian buffer on the property to be donated shall equal or exceed the acreage of riparian buffer required to be mitigated under the mitigation responsibility determined pursuant to Paragraph (e) of this Rule. If the size of the restorable riparian buffer on the property to be donated is less than the acreage of riparian buffer required to be mitigated under the mitigation responsibility determined pursuant to Paragraph (e), then the applicant shall satisfy the remaining balance by Subparagraph (c)(1) or (2) or a combination of (c)(1) and (2) of this Rule;
 - (D) The property shall not have any impervious cover or stormwater conveyances such as ditches, pipes or drain tiles. If impervious cover or stormwater conveyances exist, they shall be eliminated and the flow converted to diffuse flow;
 - (E) The property shall be suitable to be successfully restored, based on existing hydrology, soils, and vegetation;
 - (F) The estimated cost of restoring and maintaining the property shall not exceed the value of the property minus site identification and land acquisition costs unless the applicant supplies financial assurance acceptable to the Division for restoration and maintenance of the buffer;
 - (G) The property shall not contain any building, structure, object, site, or district that is listed in the National Register of Historic Places established pursuant to Public Law 89-665, 16 U.S.C. 470 as amended;
 - (H) The property shall not contain any hazardous substance or solid waste such that water quality could be adversely impacted, unless the hazardous substance or solid waste can be properly remediated before the interest is transferred;
 - (I) The property shall not contain structures or materials that present health or safety concerns to the general public. If wells, septic, water or sewer connections exist, they shall be filled, remediated or closed at owner's expense in accordance with state and local health and safety regulations before the interest is transferred. Sewer connections in Zone 2 may be allowed for projects in accordance with Part (k)(2)(E) of this Rule;
 - (J) The property and adjacent properties shall not have prior, current, or known future land use that would inhibit the function of the restoration effort;
 - (K) The property shall not have any encumbrances or conditions that are inconsistent with the requirements of this rule or purposes of the buffer rules;
 - (L) Fee simple title to the property or a conservation easement in the property shall be donated to the State of North Carolina; and
 - (M) Upon completion of the buffer restoration or enhancement, the property or the easement shall be donated to a local land trust or to a local government or other state organization that will hold and enforce the conservation easement and its interests. The donation shall be accompanied by a non-wasting endowment or other financial mechanism for perpetual maintenance and protection sufficient to ensure perpetual long-term monitoring and maintenance, except that where a local government has donated a conservation easement and has entered into a binding intergovernmental agreement with the Division to manage and protect the property consistent with the terms of the conservation easement, such local government shall not be required to provide a non-wasting endowment.
- (4) At the expense of the applicant or donor, the following information shall be submitted to the Division with any proposal for donations or dedications of interest in real property:
- (A) Documentation that the property meets the requirements laid out in Subparagraph (j)(3) of this Rule;
 - (B) US Geological Survey 1:24,000 (7.5 minute) scale topographic map, county tax map, USDA Natural Resource Conservation Service County Soil Survey Map, and county road map showing the location of the property to be donated along with information on existing site conditions, vegetation types, presence of existing structures and easements;

- (C) A current property survey performed in accordance with the procedures of the North Carolina Department of Administration, State Property Office as identified by the State Board of Registration for Professional Engineers and Land Surveyors in "Standards of Practice for Land Surveying in North Carolina." Copies may be obtained from the North Carolina State Board of Registration for Professional Engineers and Land Surveyors, 3620 Six Forks Road, Suite 300, Raleigh, North Carolina 27609;
- (D) A current appraisal of the value of the property performed in accordance with the procedures of the North Carolina Department of Administration, State Property Office as identified by the Appraisal Board in the "Uniform Standards of Professional North Carolina Appraisal Practice." Copies may be obtained from the Appraisal Foundation, Publications Department, P.O. Box 96734, Washington, D.C. 20090-6734; and
- (E) A title certificate.
- (k) ALTERNATIVE BUFFER MITIGATION OPTIONS. Some or all of a buffer mitigation requirement may be met through any of the alternative mitigation options described in this Paragraph. Any proposal for alternative mitigation shall meet, in addition to the requirements of Paragraphs (c), (e) and (f) of this Rule, the requirements set out in the Subparagraph addressing that option as well as the following requirements:
- (1) Any proposal for alternative mitigation shall be provided in writing to the Division and shall meet the following content and procedural requirements for approval by the Division:
- (A) Demonstration of no practical alternative. The application shall describe why traditional buffer mitigation options are not practical for the project;
- (B) Projects that have been constructed and are within the required monitoring period on the effective date of this Rule are eligible for use as alternative buffer mitigation. Projects that have completed monitoring and have been released by the Division on or before the effective date of this Rule are eligible for use as alternative buffer mitigation for a period of ten years from the effective date of this Rule;
- (C) The mitigation area shall be placed under a perpetual conservation easement or similar legal protection mechanism to provide for protection of the property's nutrient removal and other water quality functions; and
- (D) A completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring and maintenance are completed. A non-wasting endowment or other financial mechanism for perpetual maintenance and protection must be provided.
- (2) ALTERNATIVE BUFFER MITIGATION – NON-STRUCTURAL, VEGETATIVE OPTIONS
- (A) Coastal Headwater Stream Mitigation. Wooded buffers planted along Outer Coastal Plain headwater stream mitigation sites can be approved as riparian buffer mitigation as long as the site meets all applicable requirements of Paragraph (g) of this Rule. In addition, all success criteria including tree species, tree density, diffuse flow and stream success criteria specified by the Division in any required written approval of the site must be met. The area of the buffer shall be measured perpendicular to the length of the valley being restored. The area within the proposed buffer mitigation shall not also be used as wetland mitigation. Monitoring of the site must be for at least five years from the date of planting by providing annual reports for written DWQ approval;
- (B) Buffer Mitigation on Non-Subject Streams. Restoration or enhancement of buffers may be conducted on intermittent or perennial streams that are not subject to riparian buffer rules. These streams shall be confirmed as intermittent or perennial streams by Division staff or staff from a local delegated program using the Division publication, *Methodology for Identification of Intermittent and Perennial Streams and Their Origins* (v.4.11, 2010). The proposal shall meet all applicable requirements of Paragraph (g) of this Rule. Preservation of these stream buffers may be proposed in order to protect permanently the buffer from cutting, clearing, filling and grading and similar activities that would affect the functioning of the buffer. The preservation site shall protect at least a 50 foot wide forested riparian buffer and shall meet the requirements of Subparagraph (j)(2) and Parts (j)(3)(D), (G), (H), (I), (K) and (M) of this Rule. Preservation shall be proposed only when restoration or enhancement with an area at least equal to the footprint of the buffer impact has been proposed. The preservation area shall be five times larger than the required area of mitigation determined pursuant to Paragraph (e) of this Rule that is not satisfied through restoration or enhancement;

- (C) Preservation of Buffers on Subject Streams. Buffer preservation may be proposed in order to protect permanently the buffer from cutting, clearing, filling and grading and similar activities that would affect the functioning of the buffer above and beyond the protection afforded by the existing buffer rules on sites that meet the definition of a preservation site along streams, estuaries or ponds that are subject to buffer rules. The preservation site shall meet the requirements of Subparagraph (j)(2) and Part (j)(3)(D), (G), (H), (I), (K) and (M) of this Rule. Preservation shall be proposed only when restoration or enhancement with an area at least equal to the footprint of the buffer impact has been proposed. The preservation area shall be ten times larger in non-urban areas and three times larger in urban areas than the required area of mitigation determined pursuant to Paragraph (e) of this Rule that is not satisfied through restoration or enhancement. Reduced buffer mitigation credit can be given per Part (k)(2)(D) of this Rule in urban areas;
- (D) Narrower buffers on urban streams. Buffer restoration or enhancement with widths less than 50 feet may be proposed along urban streams. If buffer widths between 30 and 50 feet are proposed and on-site stormwater management is provided to control local sources of nutrients and other pollutants, then full buffer credit shall be awarded for the area of buffer restored or enhanced. A total of 75% of full credit shall be awarded for buffers between 20 and 30 feet wide if on-site stormwater management is provided to control local sources of nutrients and other pollutants. If on-site stormwater management is not provided, then 50% of full credit shall be provided for buffers between 30 and 50 feet wide and 25% of full credit for buffers between 20 and 30 feet wide. Buffers less than 20 feet wide shall receive no buffer credit regardless of whether on-site stormwater management is provided;
- (E) Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in Zone 1, that portion of the sewer easement within Zone 1 is not suitable for buffer mitigation. If the proposed mitigation site contains a sewer easement in Zone 2, the portion of the sewer easement in Zone 2 may be suitable for buffer mitigation if the applicant restores or enhances the forested buffer in Zone 1 adjacent to the sewer easement, the sewer easement is at least 30 feet wide, the sewer easement is required to be maintained in a condition which meets the vegetative requirements of the collection system permit, and diffuse flow is provided across the entire buffer width;
- (F) Enhancement of grazing areas adjacent to streams. Buffer credit at a 2:1 ratio shall be available for an applicant who proposes permanent exclusion of grazing livestock that otherwise degrade the stream and riparian zone through trampling, grazing or waste deposition by fencing the livestock out of the stream and its adjacent buffer. The applicant shall provide an enhancement plan to the standards identified in Paragraph (g). The applicant shall demonstrate that grazing was the predominant land use since the effective date of the applicable buffer rule.
- (3) ALTERNATIVE BUFFER STORMWATER TREATMENT OPTIONS.
- (A) For all structural options: Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer impact, and the remaining mitigation resulting from the multipliers can be met through structural options;
- (B) Structural measures already required by other local, state or federal rule or permit cannot be used as alternative buffer mitigation, except to the extent such measure(s) exceed the requirements of such rule. Stormwater Best Management Practices (BMPs), including bioretention facilities, constructed wetlands, infiltration devices and sand filter are all potentially approvable (BMPs) for alternative buffer mitigation. Other BMPs may be approved only if they meet the nutrient removal levels outlined in Part (3)(C) of this Subparagraph. Existing or planned BMPs for a local, state or federal rule or permit may be retrofitted or expanded to improve their nutrient removal if this level of treatment would not be required by other local, state or federal rules. In this case, the predicted increase in nutrient removal may be counted toward alternative buffer mitigation;
- (C) Minimum treatment levels: Any structural BMP shall provide at least 30% total nitrogen and 35% total phosphorus removal as demonstrated by a scientific and engineering literature review as approved by the Division. The application shall demonstrate that the

proposed alternative removes an equal or greater annual mass load of nutrients to surface waters as the buffer impact authorized in the authorization certificate or variance, following the calculation of impact and mitigation areas pursuant to Paragraphs (d) and (e) of this Rule. To estimate the rate of nutrient removal of the impacted buffer, the applicant shall use a method previously approved by the Division. Alternatively, the applicant may propose an alternative method of estimating the rate of nutrient removal for consideration and review by the Division;

- (D) All proposed structural BMPs shall follow the Division's 2009 Stormwater Best Management Practice Design Manual. If a specific proposed structural BMP is not addressed in this Manual, follow Chapter 20 in this Manual for approval;
 - (E) An operation and maintenance plan is required to be approved by the Division for all structural options;
 - (F) Continuous and perpetual maintenance is required for all structural options and shall follow the Division's 2009 Stormwater Best Management Practice Design Manual;
 - (G) Annual reports shall be sent in writing to the Division of Water Quality concerning operation and maintenance of all structural options approved under this Rule;
 - (H) Removal and replacement of structural options: If a structural option is proposed to be removed and cannot be replaced on site, then a structural or non-structural measure of equal or better nutrient removal capacity shall be constructed as a replacement with the location as specified by Paragraph (e) of this Rule;
 - (I) Renovation or repair of structural options: If a structural option must be renovated or repaired, it shall be renovated to provide equal or better nutrient removal capacity as originally designed;
 - (J) Structural options as well as their operation and maintenance are the responsibility of the landowner or easement holder unless the Division agrees in writing to operation and maintenance by another responsible party. Structural options shall be located in recorded drainage easements for the purposes of operation and maintenance and shall have recorded access easements to the nearest public right-of-way. These easements shall be granted in favor of the party responsible for operating and maintaining the structure, with a note that operation and maintenance is the responsibility of the landowner, easement holder or other responsible party; and
 - (K) Bonding and endowment. A completion bond that is payable to the Division sufficient to ensure that land purchase, construction, monitoring and maintenance are completed and a non-wasting endowment or other financial mechanism for perpetual maintenance and protection must be provided.
- (4) OTHER ALTERNATIVE BUFFER MITIGATION OPTIONS. Other riparian buffer mitigation options may be considered by the Division on a case-by-case basis after 30-day public notice through the Division's Water Quality Certification Mailing List in accordance with 15A NCAC 02H .0503 as long as the options otherwise meet the requirements of this Rule. Division staff shall present recommendations to the Environmental Management Commission for a final decision with respect to any proposal for alternative buffer mitigation options not specified in this Rule.
- (1) ACCOUNTING FOR BUFFER CREDIT, NUTRIENT OFFSET CREDIT AND STREAM MITIGATION CREDIT. Buffer mitigation credit, nutrient offset credit, wetland mitigation credit and stream mitigation credit shall be accounted for in accordance with the following:
- (1) Buffer mitigation that is used for buffer mitigation credit cannot be used for nutrient offset credits;
 - (2) Buffer mitigation or nutrient offset credit cannot be generated within wetlands that provide wetland mitigation credit required by 15A NCAC 02H .0506; and
 - (3) Either buffer mitigation or nutrient offset credit may be generated on stream mitigation sites as long as the width of the restored or enhanced riparian buffer is at least 50 feet.

History Note: Authority 143-214.1; 143-214.5; 143-214.7; 143-214.20; 143-215.3(a)(1); S.L. 1998, c. 221; 143-215.6A; 143-215.6B; 143-215.6C; 143-215.8A; 143-215.8B; 143-282(c); 143B-282(d); S.L. 1999, c. 329, s. 7.1; S.L. 2001, c. 418, s. 4.(a); S.L. 2003, c. 340, s. 5; S.L. 2005-190; S.L. 2006-259; S.L. 2009-337; S.L. 2009-486.
Eff. Pending Legislative Review.

REQUEST FOR TECHNICAL CHANGE

AGENCY: Environmental Management Commission

RULE CITATION: 15A NCAC 02B .0295

DEADLINE FOR RECEIPT: Friday, August 14, 2015

NOTE WELL: This request when viewed on computer extends several pages. Please be sure you have reached the end of the document.

The Rules Review Commission staff has completed its review of this rule prior to the Commission's next meeting. The Commission has not yet reviewed this rule and therefore there has not been a determination as to whether the rule will be approved. You may call this office to inquire concerning the staff recommendation.

In reviewing these rules, the staff determined that the following technical changes need to be made:

On the Submission for Permanent Rule form, please correct the date the Notice of Text was published to February 16, 2015.

On Page 1, (b)(1), line 15, insert a comma after “.0267”

On Page 2, (b)(11), line 6, who determines whether this is appropriate? And how?

In (b)(12), line 10, I take it your regulated public knows what is meant by “dense”?

In (b)(15), line 21, insert a comma after “shrub”

In (b)(16), line 22, I suggest inserting an “either” after “that is”

On line 23, I recommend inserting “is located” between “or” and “within”

In (c)(1) and (2), lines 31 and 33, insert a comma after “.0267”

In (c)(1), line 32, since “authorization certificate” is used in other Rules in the Subchapter, I take it your regulated public is familiar with the term?

On Page 3, (d), line 26, and (e), line 36, why is “Zone” capitalized?

In (d), line 27 why not just state “the applicable Rule .0233,...”?

So that I understand – using the guidance in Paragraphs (d) and (e), the Authority will determine how much impact/how many credits are needed for the alternatives?

On Page 4, the changes to (f) regarding the “Outside of the eight-digit HUC” means that the location no longer needs to be adjacent? And there are no longer requirements for explaining the mitigation is not practical?

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

In (g)(1), line 15, I suggest you replace “in which” with “where”

So that I understand – the locations and Rules referenced in (g)(1)(A) through (D) are not referenced elsewhere in the Rule. Why is this? I note that Paragraph (c) states that the Rule applies to Rules .0233, .0243, .0250, .0259, .0267, and .0607. Why are these other Rules listed in this Part?

In (h), line 29, how is the proposed? Following the procedure in Paragraph (c) by submitting a written proposal?

On Page 5, (h)(1), line 1, who will restore or enhance?

In (h)(3), line 7, I do not think you should delete “of real property or an interest in real property” but if you want to delete, at least retain “property” This is a very long Rule and it is helpful for people to see this to understand what the cross-reference will lead to.

In (i), do you need to insert a reference to G.S. 143-214.20 to make it clear that government entities have a broader ability to make this purchase than non-governmental actors? Or do you believe it is clear to your regulated public?

On Page 6, you are allowing the property to be donated to the Riparian Buffer Restoration Fund. G.S. 143-214.20 allows offsets for donations of real property or an interest in real property to the Department, another State agency, a unit of local government, or a private nonprofit conservation organization approved by the Department. Or is Paragraph (k) intended to address G.S. 143-214.20(a1)(1) and (a2)(1)? You won't allow payment of money, only donation of property?

In (l)(2)(B), line 21, “as appropriate” as determined by whom?

In (l)(2)(C), what is the authority for this financial assurance?

In (l)(2)(C), line 27, why are you spelling out “Division of Mitigation Services”? You just created the acronym in Paragraph (j).

In (l)(3), line 32, who determines it is “not feasible”?

On line 35, insert a comma after “review and approval”

On line 36, will the Division reduce the credit or the Authority? I note that (l) begins that the Authority will issue the mitigation determination.

On Page 7, (l)(4), line2, replace “is” after “Zone 1” with “shall not be”

In (l)(5), the applicant does not have to do this? I don't understand why “applicant” was removed here.

On line 11, why is “Mitigation Banking Instrument” capitalized? It is not in (b)(7).

In (l)(6), line 13, I suggest deleting “that have been” and “are” so it reads “Projects constructed and within the ...”

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

On line 14, replace “are” with “shall be”

On line 15, should this say “Division” or “Authority”?

On line 20, replace the semicolon after “following” with a colon.

On line 30, I suggest stating “These buffer mitigation sites” or “The buffer mitigation sites identified in this Subparagraph”

On Page 8, the table in Paragraph (m), I take it that your regulated public knows what “non-subject” and “subject” mean?

In (n), so that I understand – the applicant will propose that a site qualifies as a restoration or enhancement site? If so, does that mean that in (n)(1), that the applicant may now only propose a 33% credit for a buffer that is between 101 and 200 feet, rather than the published 50%? Further, I note this is not the amount in the stakeholder report. What is the authority for this change?

In (n)(2), line 26, insert a period after “approval” However, to make the sentence clearer, you may wish to say “The application or mitigation provider shall submit a restoration or enhancement mitigation plan to the Authority for written approval.”

On Page 9, (n)(2)(B), I take it the applicant requests the alternative vegetation plans in the request?

In (n)(2)(C) and (D), who determines if this is applicable?

In (n)(2)(E), line 21, please insert a comma after “water”

Also, is (n)(2)(E) intended to state how often the applicant or mitigation provider will monitor this? Is this connected to the annual reports required for five years in (n)(4)?

In (n)(3), is this language intended to state that mitigation must be completed within one year unless a longer period is agreed to? But the baseline in the Rule is one year? And how does this agreement in writing occur? Is it in the Authority approval at the outset? If not, how is this extension requested and granted?

In (n)(4), line 35, I take it the approval is by the Authority?

On Page 10, line 5, will this occur because of the reports required? Is this how the Authority will know?

On line 7, if the Authority “may” require this, when will it not? Please note the same question in line 9.

On line 11, please insert a comma after “period”

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

On line 12, what will the Authority base the decision for further monitoring and the length of that monitoring upon?

On Page 12, Paragraph (o), who determines this? The Division or the Authority? The Paragraph states "Division" throughout, but elsewhere, the Authority makes the decision. Is this intentional? Are you relying upon G.S. 143-214.20(a1)94) and (a2)(4), which requires approval by the Department?

§ 143-214.20. Riparian Buffer Protection Program: Alternatives to maintaining riparian buffers; compensatory mitigation fees.

(a1) Compensatory Mitigation Options Available to Government Entities. - A government entity, as defined in G.S. 143-214.11, may satisfy compensatory mitigation requirements by any of the following actions:

(4) Construction of an alternative measure that reduces nutrient loading as well or better than the riparian buffer that is lost in the same river basin as the riparian buffer that is lost and that is approved by the Department.

(a2) Compensatory Mitigation Options Available to Applicants Other than Government Entities. - An applicant other than a government entity, as defined in G.S. 143-214.11, may satisfy compensatory mitigation requirements by any of the following actions:

(4) Restoration or enhancement of an existing riparian buffer that is not otherwise required to be protected, or creation of a new riparian buffer, that will provide protection of water quality that is equivalent to or greater than that provided by the riparian buffer that is lost in the same river basin as the riparian buffer that is lost and that is approved by the Department.

On Page 13, (o)(1) on line 14, I take it your regulated public knows what "Outer Coastal Plain" means?

On line 22, do you need to retain "at least"?

In (o)(2), line 25, do you need to retain "the applicable riparian buffer"? Couldn't you state "subject to Rules .0233,..."? Please note the same for (o)(3), line 33.

On line 26, please insert an "or" after ".0267" Please note the same for (o)(3), lines 33-34

On line 28 and 29, please put "Methodology for Identification... (v.4.11, 2010" in quotation marks.

In (o)(2) and (3), what is your authority to cite to an internal publication? Are you relying upon SL 2014-95?

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

On Page 14, in (o)(3) and (4), so that I understand, where you reference 15A NCAC 02R .0403, that rule governs the donation of real property? That is applicable here?

In (o)(4), line 9, do you need to retain “the applicable riparian buffer”?

On Page 15, (o)(6), line 8, please insert a comma after “data”

On line 9, define “immediate”

In (o)(7), on line 32, do you need to retain “at least”?

In (o)(8)(A), what are “structural measures”? Are they the same as “structural options” in (o)(8)(D)?

On Page 16, line 10, how are these “potentially approvable”? How does the request occur and what is the basis for making the decision.

Also on line 10, please remove the parenthesis from “(BMPs)”

On line 14, please replace “would not be” with “is not”

In (o)(8)(B), line 19, approved by the Division based upon what? The review?

On lines 24 and 26, please put the publication in quotation marks. Also, what is your authority to use this internal publication the Rule?

In (o)(8)(C), lines 31 and 32, please put the publication in quotation marks. Also, what is your authority to use this internal publication the Rule?

In (o)(8)(D), how will the Division approve this?

On Page 17, (o)(8)(E), what are “continuous” and “perpetual”?

In (o)(8)(G), line 8, who determines if the capacity is “equal or better”? The Division?

Also on line 8, please change “Paragraph” to “Paragraphs”

In (o)(8)(H), who determines the need for renovation or repair?

In (o)(8)(I), line 13, I suggest inserting a comma after “options” and “maintenance”

On line 20, please insert a comma after “holder”

In (o)(9), lines 25 – 26, why is this in all capital letters? (o)(1) through (8) are not.

On line 26, state “options not specified within this Rule...”

On line 29, “Paragraph” should be capitalized.

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

On line 35, please confirm that you meant to state "DWRwetlands" and there is no space.

On Page 18, in the History Note, do not delete the Temporary Adoption date.

Please retype the rule accordingly and resubmit it to our office at 1711 New Hope Church Road, Raleigh, North Carolina 27609.

Amanda J. Reeder
Commission Counsel
Date submitted to agency: July 31, 2015

1 **15A NCAC 02B .0295 is adopted with changes as published in 29:16 NCR 1939-1950 as follows:**

2
3 **15A NCAC 02B .0295 MITIGATION PROGRAM REQUIREMENTS FOR PROTECTION AND**
4 **MAINTENANCE OF RIPARIAN BUFFERS**

5 (a) PURPOSE. The purpose of this Rule is to set forth the mitigation requirements that apply to applicants listed in
6 ~~Subparagraphs (1) and (2) of this Paragraph (c) of this Rule~~ and to set forth requirements for buffer mitigation
7 providers. ~~Buffer mitigation is required when one of the following applies:~~

8 ~~(1) The applicant has received an authorization certificate for impacts that cannot be avoided or~~
9 ~~practicably minimized pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607 of this~~
10 ~~Subchapter; or~~

11 ~~(2) The applicant has received a variance pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607~~
12 ~~of this Subchapter and is required to perform mitigation as a condition of a variance approval.~~

13 (b) DEFINITIONS. For the purpose of this Rule, these terms shall be defined as follows:

14 (1) "Authority" means either the Division or a local government that has been delegated or designated
15 pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607 of this Subchapter to implement the
16 riparian buffer program.

17 (2) "Compensatory Buffer Mitigation Bank" means a buffer mitigation site created by a mitigation
18 provider and approved for mitigation credit by the Division through execution of a mitigation
19 banking instrument.

20 ~~(2)~~(3) "Division" means the Division of Water Resources of the North Carolina Department of
21 Environment and Natural Resources.

22 ~~(3)~~(4) "Enhancement Site" means a riparian zone site characterized by conditions between that of a
23 restoration site and a preservation site such that the establishment of woody stems (i.e., tree or
24 shrub species) will maximize nutrient removal and other buffer functions.

25 ~~(4)~~(5) "Hydrologic Area" means the Watershed Boundary Dataset (WBD), located at no cost at
26 http://data.nconemap.com/geoportal/catalog/search/resource/details.page?uuid={16A42F31-
27 6DC7-4EC3-88A9-03E6B7D55653} using the eight-digit Hydrologic Unit Code (HUC) prepared
28 by the United States Geological Survey.

29 ~~(5)~~(6) "Locational Ratio" means the mitigation ratio applied to the mitigation requirements based on the
30 location of the mitigation site relative to the impact site as set forth in Paragraph (f).

31 (7) "Mitigation banking instrument" means the legal document for the establishment, operation, and
32 use of a mitigation bank.

33 ~~(6)~~(8) "Monitoring period" means the length of time specified in the approved mitigation plan during
34 which monitoring of vegetation success and other anticipated benefits to the adjacent water as
35 listed in the ~~authorization certificate~~ mitigation approval is done.

36 ~~(7)~~(9) "Non-wasting endowment" means a fund that generates enough interest to cover the cost of the
37 long term monitoring and maintenance.

1 ~~(8)~~(10) "Outer Coastal Plain" means the portion of the state shown as the Middle Atlantic Coastal Plain
2 (63) on Griffith, et al. (2002) "Ecoregions of North and South Carolina." Reston, VA, United
3 States Geological Survey available at no cost at
4 http://www.epa.gov/wed/pages/ecoregions/ncsc_eco.htm.

5 ~~(9)~~(11) "Preservation Site" means riparian zone sites that are characterized by a **natural** forest consisting
6 of the forest strata and diversity of species appropriate for the **location, Omernik Level III**
7 **ecoregion. [ecoregion available at no cost at**
8 **http://www.epa.gov/wed/pages/ecoregions/level_iii_iv.htm]**

9 ~~(10)~~(12) "Restoration Site" means riparian zone sites that are characterized by an absence of trees and by a
10 lack of dense growth of smaller woody stems (i.e., shrubs or saplings) or sites that are
11 characterized by scattered individual trees such that the tree canopy is less than 25 percent of the
12 cover and by a lack of dense growth of smaller woody stems (i.e., shrubs or saplings).

13 ~~(11)~~(13) "Riparian buffer mitigation unit" means a unit representing a credit of riparian buffer mitigation
14 **that offsets one square foot of riparian buffer impact, as set forth in Paragraph (m).**

15 ~~(12)~~(14) "Riparian wetland" means a wetland that is found in one or more of the following landscape
16 positions:

- 17 (A) in a geomorphic floodplain;
- 18 (B) in a natural topographic crenulation;
- 19 (C) contiguous with an open water equal to or greater than 20 acres in size; or
- 20 (D) subject to tidal flow regimes excluding salt/brackish marsh wetlands.

21 **(15) "Stem" means a woody seedling, sapling, shrub or tree, no less than 10 cm in height.**

22 ~~(13)~~~~(15)~~(16) "Urban" means an area that is designated as an urbanized area under the most recent
23 federal decennial census available at no cost at <http://www.census.gov/> or within the corporate
24 limits of a municipality.

25 ~~(14)~~~~(16)~~(17) "Zonal Ratio" means the mitigation ratio applied to impact amounts in the respective
26 zones of the riparian buffer as set forth in Paragraph (e) of this Rule.

27 (c) ~~MITIGATION REQUIREMENTS. APPLICATION REQUIREMENTS, MITIGATION SITE~~
28 ~~REQUIREMENTS AND MITIGATION OPTIONS.~~ Buffer mitigation is required when one of the following
29 applies:

- 30 (1) The applicant has received an authorization certificate for impacts pursuant to Rules .0233, .0243,
31 .0250, .0259, .0267 or .0607 of this Subchapter and is required to perform mitigation as a
32 condition of the authorization certificate; or
- 33 (2) The applicant has received a variance pursuant to Rules .0233, .0243, .0250, .0259, .0267 or .0607
34 of this Subchapter and is required to perform mitigation as a condition of a variance approval.

35 Any applicant ~~who seeks approval to impact riparian buffers covered under this Rule who is required by Paragraph~~
36 ~~(a)~~ shall submit to the Division Authority a written mitigation proposal that calculates the required area of mitigation
37 and describes the area and location of each type of proposed mitigation. The applicant shall not impact buffers until

1 the ~~Division~~ Authority approves the mitigation plan and issues written ~~authorization approval~~. For all options
2 except payment of a fee under Paragraphs (j) or (k) of this Rule, the proposal shall include a commitment to provide:

- 3 (1) ~~— a perpetual conservation easement or similar legal protection mechanism to ensure perpetual~~
4 ~~stewardship that protects the mitigation site's nutrient removal and other water quality functions;~~
- 5 (2) ~~— a commitment to provide a non-wasting endowment or other financial mechanism for perpetual~~
6 ~~stewardship and protection; and~~
- 7 (3) ~~— a commitment to provide a completion bond that is payable to the Division sufficient to ensure~~
8 ~~that land or easement purchase, construction, monitoring, and maintenance are completed.~~

9 For each mitigation site, the ~~Division~~ shall identify functional criteria to measure the anticipated benefits of the
10 mitigation to the adjacent water. The ~~Division~~ shall issue a mitigation determination that specifies the area, type,
11 and location of mitigation and the water quality benefits to be provided by the mitigation site. The mitigation
12 determination issued according to this Rule shall be included as an attachment to the authorization certification. The
13 applicant may propose any of the following types of mitigation and shall provide a written demonstration of
14 practicality that takes into account the relative cost and availability of potential options, as well as information
15 addressing all requirements associated with the option proposed:

- 16 (1) ~~Applicant provided riparian buffer restoration or enhancement pursuant to Paragraph (i) of this~~
17 ~~Rule;~~
- 18 (2) ~~Payment of a compensatory mitigation fee to a mitigation bank if buffer credits are available~~
19 ~~pursuant to Paragraph (j) of this Rule or payment of a compensatory mitigation fee to the Riparian~~
20 ~~Buffer Restoration Fund pursuant to Paragraph (k) of this Rule. Payment shall conform to the~~
21 ~~requirements of G.S. 143-214.20;~~
- 22 (3) ~~Donation of real property or of an interest in real property pursuant to Paragraph (l) of this Rule;~~
23 ~~or~~
- 24 (4) ~~Alternative buffer mitigation options pursuant to Paragraph (m) of this Rule.~~

25 (d) AREA OF IMPACT. The ~~authority~~ Authority shall determine the area of impact in square feet to each ~~zone~~
26 Zone as defined by the applicable riparian buffer Rules .0233, .0243, .0250, .0259, .0267, or .0607 of this
27 Subchapter of the proposed riparian buffer ~~impact~~ by adding the following:

- 28 (1) The area of the footprint of the use impacting the riparian buffer;
- 29 (2) The area of the boundary of any clearing and grading activities within the riparian buffer
30 necessary to accommodate the use; and
- 31 (3) The area of any ongoing maintenance corridors within the riparian buffer associated with the use.

32 The ~~authority~~ Authority shall deduct from this total the area of any wetlands that are subject to and compliant with
33 riparian wetland mitigation requirements under 15A NCAC 02H .0506 and are located within the proposed riparian
34 buffer impact area.

35 (e) AREA OF MITIGATION REQUIRED ON ZONAL MITIGATION RATIOS. The ~~authority~~ Authority shall
36 determine the required area of mitigation for each ~~zone~~ Zone by applying each of the following ratios to the area of
37 impact calculated under Paragraph (d) of this Rule:

Basin/Watershed	Zone 1 Ratio	Zone 2 Ratio
Neuse River Basin (15A NCAC 02B .0233)	3:1	1.5:1
Catawba River Basin (15A NCAC 02B .0243)	2:1	1.5:1
Randleman Lake Watershed (15A NCAC 02B .0250)	3:1	1.5:1
Tar-Pamlico River Basin (15A NCAC 02B .0259)	3:1	1.5:1
Jordan Lake Watershed (15A NCAC 02B .0267)	3:1	1.5:1
Goose Creek Watershed (15A NCAC 02B .0607)	3:1 ^A	

^A The Goose Creek Watershed does not have a Zone 1 and Zone 2. The mitigation ratio in the Goose Creek Watershed is 3:1 for the entire buffer.

(f) AREA OF MITIGATION REQUIRED ON LOCATIONAL MITIGATION RATIOS. The applicant or mitigation provider shall use the following locational ratios as applicable based on location of the proposed mitigation site relative to that of the proposed impact site. Locational ratios shall be as follows:

Location	Ratio
Within the 12-digit HUC ^A	0.75:1
Within the eight-digit HUC ^B	1:1
In the adjacent Outside of the eight-digit HUC ^{B,C} HUC ^B	2:1

^A Except within the Randleman Lake Watershed. Within the Randleman Lake Watershed the ratio is 1:1.

^B Except as provided in Paragraph (g) of this Rule.

^C ~~To use mitigation in the adjacent eight digit HUC, the applicant shall describe why buffer mitigation within the eight digit HUC is not practical for the project.~~

(g) GEOGRAPHIC RESTRICTIONS ON LOCATION OF MITIGATION. Mitigation shall be performed in the same river basin where the impact is located with the following additional specifications:

(1) In the following cases, mitigation shall be performed in the same watershed in which the impact is located:

(A) Falls Lake Watershed, as defined in Rule .0275 of this Section;

(B) Goose Creek Watershed, as defined in Rule .0601 of this Subchapter;

(C) Randleman Lake Water Supply Watershed, as defined in Rule .0248 of this Section;

(D) Each subwatershed of the Jordan Lake watershed, as defined in Rule .0262 of this Section; and

(E) Other watersheds as specified in riparian buffer protection rules adopted by the Commission.

(2) Buffer mitigation for impacts within watersheds with riparian buffer rules that also have federally listed threatened or endangered aquatic species may be done within other watersheds with the same federally listed threatened or endangered aquatic species as long as the impacts are in the same river basin and same Omernik Level III ecoregion available at no cost at http://www.epa.gov/wed/pages/ecoregions/level_iii_iv.htm as the mitigation site.

(h) MITIGATION OPTIONS FOR APPLICANTS. The applicant may propose any of the following types of mitigation: [mitigation and shall provide a written demonstration of practicality that takes into account the relative cost and availability of potential options, as well as information addressing all requirements associated with the option proposed.]

1 (1) ~~[Applicant provided riparian]~~ Riparian buffer restoration or enhancement pursuant to Paragraph
2 (n) of this Rule;

3 (2) Payment of a compensatory mitigation fee to a compensatory buffer mitigation bank ~~[if buffer~~
4 ~~credits are available]~~ pursuant to Paragraph (i) of this Rule or payment of a compensatory
5 mitigation fee to the Riparian Buffer Restoration Fund pursuant to Paragraph (j) of this Rule.
6 Payment shall conform to the requirements of G.S. 143-214.20;

7 (3) Donation ~~[of real property or of an interest in real property]~~ pursuant to Paragraph (k) of this Rule;

8 (4) Alternative buffer mitigation ~~[options]~~ pursuant to Paragraph (o) of this Rule; or

9 (5) Other buffer mitigation ~~[options when]~~ as approved by the Environmental Management
10 Commission as a condition of a variance approval.

11 ~~[Riparian buffer restoration or enhancement is required with an area at least equal to the footprint of the buffer~~
12 ~~impact, and the remaining mitigation resulting from the application of the zonal mitigation ratios in Paragraph (e)~~
13 ~~and locational mitigation ratios in Paragraph (f) may be met through other mitigation options.]~~

14 (h) ~~RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation~~
15 ~~units as follows:~~

Mitigation Activity	Square Feet of Mitigation Buffer	Riparian Buffer Mitigation Units Generated
Restoration	1	1
Enhancement	2	1
Preservation on Non-Subject Urban Streams	3	1
Preservation on Subject Urban Streams	3	1
Preservation on Non-Subject Rural Streams	5	1
Preservation on Subject Rural Streams	10	1

16
17 (i) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC COMPENSATORY
18 BUFFER MITIGATION BANK. Applicants who choose to satisfy some or all of their mitigation by purchasing
19 mitigation credits from a private or public compensatory buffer mitigation bank shall meet the following
20 requirements:

21 (1) The compensatory buffer mitigation bank from which credits are purchased shall have available
22 riparian buffer credits approved by the Division;

23 (2) The compensatory buffer mitigation bank from which credits are purchased shall be located as
24 described in Paragraphs (e), (f), and (g) of this Rule; and

25 (3) After receiving a mitigation acceptance letter from the compensatory buffer mitigation bank, proof
26 of payment for the credits shall be provided to the Authority prior to any activity that results in the
27 removal or degradation of the protected riparian buffer.

28 (j) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND. Applicants who choose to satisfy some or
29 all of their mitigation requirement by paying a compensatory mitigation fee to the Riparian Buffer Restoration Fund
30 shall meet the requirements of Rule .0269 of this Section. Payment made to the NC Division of Mitigation Services
31 (DMS) ~~[Ecosystem Enhancement Program (the Program)]~~ shall be contingent upon acceptance of the payment by

1 the ~~DMS. [Program.]~~ The ~~DMS [Program]~~ shall consider their financial, temporal, and technical ability to satisfy the
2 mitigation request to determine whether they shall accept or deny the request.

3 (k) DONATION OF PROPERTY. Applicants who choose to satisfy their mitigation requirement by donating real
4 property or an interest in real property to fully or partially offset an approved payment into the Riparian Buffer
5 Restoration Fund pursuant to Paragraph (j) of this Rule shall do so in accordance with 15A NCAC 02R .0403.

6 (l) MITIGATION SITE REQUIREMENTS FOR APPLICANTS AND MITIGATION PROVIDERS. For each
7 mitigation site proposed by an applicant or mitigation provider under Paragraphs (n) or (o), the Authority shall
8 identify functional criteria to measure the anticipated benefits of the mitigation to the adjacent water. The Authority
9 shall issue a mitigation determination that specifies the area, type, and location of mitigation and the water quality
10 benefits to be provided by the mitigation site. All mitigation proposals shall meet the following criteria:

11 (1) The location of the buffer mitigation site shall comply with the requirements of Paragraphs ~~(e),~~
12 ~~(f),~~ ~~(f)~~ and (g) of this Rule. In the Catawba watershed, buffer mitigation may be done along the
13 lake shoreline as well as along intermittent and perennial stream channels throughout the
14 watershed.

15 (2) The mitigation proposal shall include a commitment to provide:

16 (A) a perpetual conservation easement or similar preservation mechanism to ensure perpetual
17 stewardship that protects the mitigation site's nutrient removal and other water quality
18 functions;

19 (B) a non-wasting endowment or other dedicated financial surety to provide for the perpetual
20 land management and hydrological maintenance of lands ~~(or)~~ and maintenance of
21 structures as appropriate; ~~structures;~~ and

22 (C) financial assurance in the form of a completion bond, credit insurance, letter of credit,
23 escrow, or other vehicle acceptable to the Authority payable to, or for the benefit of, the
24 Authority in an amount sufficient to ensure that the property is secured in fee title or by
25 easement, and that planting or construction, monitoring and maintenance are completed
26 as necessary to meet success criteria as specified in the approved mitigation plan. This
27 financial assurance obligation shall not apply to the NC ~~Division of Mitigation Services.~~
28 ~~[Ecosystem Enhancement Program.]~~

29 (3) Diffuse flow of runoff shall be maintained in the riparian buffer. Any existing impervious cover
30 or stormwater conveyances such as ditches, pipes, or drain tiles shall be eliminated and the flow
31 converted to diffuse flow. If the applicant or mitigation provider determines that elimination of
32 existing stormwater conveyances is not feasible, then they shall include a justification and shall
33 provide a delineation of the watershed draining to the stormwater outfall and the percentage of the
34 total drainage by area treated by the riparian buffer with the mitigation plan specified in Paragraph
35 (n) or Paragraph (o) for Authority approval. During mitigation plan review and approval the
36 Division may reduce credit proportionally.

- 1 (4) Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in
2 Zone 1, that portion of the sewer easement within Zone 1 is not suitable for buffer mitigation
3 credit. If the proposed mitigation site contains a sewer easement in Zone 2, the portion of the
4 sewer easement in Zone 2 may be suitable for buffer mitigation credit if:
- 5 (A) the applicant or mitigation provider restores or enhances the forested buffer in Zone 1
6 adjacent to the sewer easement;
- 7 (B) the sewer easement is required to be maintained in a condition that meets the vegetative
8 requirements of the collection system permit; and
- 9 (C) diffuse flow is provided across the entire buffer width.
- 10 (5) The ~~applicant or~~ mitigation provider shall provide a site specific credit/debit ledger to the
11 Authority at regular intervals as specified in the mitigation plan approval or Mitigation Banking
12 Instrument once credits are established and until they are exhausted.
- 13 (6) Projects that have been constructed and are within the required monitoring period on the effective
14 date of this Rule are eligible for use as buffer mitigation sites. Projects that have completed
15 monitoring and were released by the Division on or ~~before~~ within the past ten years of the
16 effective date of this Rule ~~are~~ may be eligible for use as a buffer mitigation site. ~~for a period of~~
17 40 years from the effective date of this Rule. All mitigation site proposals submitted under this
18 Subparagraph shall meet the requirements set out in Paragraphs (l) and (m) of this Rule and the
19 requirements set out in the named Paragraph or Subparagraph addressing that applicable
20 mitigation type or option, as well as the following:
- 21 (A) A map or maps of the proposed mitigation site;
- 22 (B) Documentation of pre-existing conditions showing that the mitigation site met the criteria
23 to qualify as a restoration site or enhancement site as defined in Paragraph (b) of this
24 Rule, or that the mitigation site met the criteria to qualify as an alternative mitigation site
25 as specified in the Paragraph (o);
- 26 (C) Documentation of the activities that were conducted at the buffer mitigation site to meet
27 success criteria identified in the applicable Paragraph or Subparagraph; and
- 28 (D) Documentation that the project met the success criteria identified in the applicable
29 Paragraph or Subparagraph.
- 30 Buffer mitigation sites shall receive credit in accordance with the criteria set forth Paragraph (m)
31 and Subparagraph (n)(1).
- 32 (7) Buffer mitigation credit, nutrient offset credit, wetland mitigation credit, and stream mitigation
33 credit shall be accounted for in accordance with the following:
- 34 (A) Buffer mitigation used for buffer mitigation credit shall not be used for nutrient offset
35 credits;
- 36 (B) Buffer mitigation credit shall not be generated within wetlands that provide wetland
37 mitigation credit required by 15A NCAC 02H .0506; and

(C) Buffer mitigation credit may be generated on stream mitigation sites as long as the width of the restored or enhanced riparian buffer meets the requirements of Subparagraph (n)(1).

(m) RIPARIAN BUFFER MITIGATION UNITS. Mitigation activities shall generate riparian buffer mitigation units as follows:

<u>Mitigation Activity</u>	<u>Square Feet of Mitigation Buffer</u>	<u>Riparian Buffer Mitigation Units Generated</u>
<u>Restoration Site</u>	<u>1</u>	<u>1</u>
<u>Enhancement Site</u>	<u>2</u>	<u>1</u>
<u>Preservation Site on Non-Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation Site on Subject Urban Streams</u>	<u>3</u>	<u>1</u>
<u>Preservation Site on Non-Subject Rural Streams</u>	<u>5</u>	<u>1</u>
<u>Preservation Site on Subject Rural Streams</u>	<u>10</u>	<u>1</u>

~~(n)~~ RIPARIAN BUFFER RESTORATION SITE OR ENHANCEMENT SITE. ENHANCEMENT. Division Authority staff shall make an on-site determination as to whether a potential mitigation site qualifies as a restoration site or enhancement site as defined in Paragraph (b) of this Rule. Riparian buffer restoration sites or enhancement sites shall meet the following requirements:

(1) Buffer restoration sites or enhancement sites may be proposed as follows:

<u>Urban Areas</u>		<u>Non-Urban Areas</u>	
<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>	<u>Buffer width (ft)</u>	<u>Proposed Percentage of Full Credit</u>
<u>Less than 20</u>	<u>0 %</u>	<u>Less than 20</u>	<u>0 %</u>
<u>20-29</u>	<u>75 %</u>	<u>20-29</u>	<u>0 %</u>
<u>30-100</u>	<u>100 %</u>	<u>30-100</u>	<u>100 %</u>
<u>101-200^A 101-200</u>	<u>50 %^A 33%</u>	<u>101-200^A</u>	<u>50 %^A</u>

^A The area of the [buffer] mitigation site beyond 100 linear feet from the top of bank shall comprise no more than 10 percent of the total area of [buffer] mitigation.

~~(2) The location of the restoration or enhancement shall comply with the requirements of Paragraphs (e), (f), and (g) of this Rule. In the Catawba watershed, buffer mitigation may be done along the lake shoreline as well as along intermittent and perennial stream channels throughout the watershed.~~

~~(3) Diffuse flow of runoff shall be maintained in the riparian buffer. Any existing impervious cover or stormwater conveyances such as ditches, pipes, or drain tiles shall be eliminated and the flow converted to diffuse flow. If elimination of existing stormwater conveyances is not feasible, then the applicant or mitigation provider shall provide a delineation of the watershed draining to the stormwater outfall and the percentage of the total drainage treated by the riparian buffer for Division approval; the Division may reduce credit proportionally.~~

~~(4)~~ (2) The applicant or mitigation provider shall submit to the Authority a restoration or enhancement mitigation plan for written approval by the Division. The restoration or enhancement plan shall

1 demonstrate compliance with the requirements of ~~Subparagraphs (1) through (3) of this Paragraph~~
2 ~~and Paragraphs (l) and (m) and shall also contain the following: following in addition to the~~
3 ~~elements required in Paragraph (e) of this Rule:~~

- 4 (A) A map of the proposed restoration or enhancement site;
- 5 (B) A vegetation plan that shall detail the activities proposed to ensure a final performance
6 standard of 260 stems per acre at the completion of monitoring. The final performance
7 standard shall include a minimum of four native hardwood tree species or four native
8 hardwood tree and native shrub species, where no one species is greater than 50 percent
9 of stems, established stems, established [planted] at a density sufficient to provide 260
10 stems per acre at the completion of monitoring. ~~Native hardwood and native shrub~~
11 ~~volunteer species may be included to meet the final performance standards.~~ standard of
12 260 stems per acre. The ~~Division~~ Authority may approve alternative vegetation plans
13 upon consideration of factors, including site wetness and plant availability to meet the
14 requirements of this Part;
- 15 (C) A grading plan (if applicable). The site shall be graded in a manner to ensure diffuse
16 flow through the entire riparian buffer;
- 17 (D) A schedule for implementation, including a fertilization and herbicide plan if applicable;
18 and
- 19 (E) A monitoring plan plan, including monitoring of vegetative success to document whether
20 the site is expected to meet the final performance standards as defined in Part (n)(2)(B)
21 and other anticipated benefits to the adjacent water as listed in the authorization
22 certification. The plan shall include monitoring the vegetative status of the restoration or
23 enhancement site for five years, including the health and average stem densities of native
24 hardwood tree or tree and shrub species that are to be counted toward the final
25 performance standard.

26 ~~(5)(3)~~ Within one year after the ~~Division has approved the restoration or enhancement~~ Authority
27 approval of the mitigation plan, the applicant or mitigation provider shall present documentation
28 to the ~~Division~~ Authority that the riparian buffer has been restored or enhanced unless the ~~Division~~
29 Authority agrees in writing prior to that date to a longer time period. ~~period due to the necessity~~
30 ~~for a longer construction period.~~

31 ~~(6)~~ ~~The mitigation area shall be placed under a perpetual conservation easement or similar legal~~
32 ~~protection mechanism to provide for protection of the property's nutrient removal and other water~~
33 ~~quality functions.~~

34 ~~(7)(4)~~ The applicant or mitigation provider shall submit written annual reports reports, unless an
35 alternative schedule has been approved during the mitigation plan approval, for a period of five
36 years after completion of the activities identified in Part (n)(2)(B) at the restoration site or
37 enhancement site has been conducted showing showing:

1 (A) that ~~[the survival of] the trees or tree and shrub species planted;~~ compliance with the
2 monitoring plan approved pursuant to Part (n)(2)(E) of this Rule; and
3 ~~[(B) — whether the vegetation of the site is expected to meet] are meeting success criteria; and~~
4 ~~[(C)](B)~~ that diffuse flow through the riparian buffer has been maintained.

5 ~~The~~ If the Authority determines that the native hardwood tree or tree and shrub species at the site are not
6 expected to meet the final performance standards listed in Part (n)(2)(B), then the Authority may require
7 that the applicant or mitigation provider shall replace trees or trees and shrubs and restore diffuse flow if as
8 needed during that five-year period. If the Authority determines that diffuse flow through the buffer is not
9 being maintained, then the Authority may require that the applicant or mitigation provider restore diffuse
10 flow. If the Authority determines that the [objectives] final performance standards listed in Part (n)(2)(B)
11 [identified in this Paragraph] have not been achieved at the end of the five-year monitoring period the
12 Authority may require additional Additional years of monitoring. ~~monitoring may be required if the~~
13 ~~objectives under Paragraph (i) have not been achieved at the end of the five year monitoring period.~~

14 (8) — ~~The mitigation provider shall provide a site specific credit/debit ledger to the Division at regular~~
15 ~~intervals once credits are established and until they are exhausted.~~

16 (9) — ~~The mitigation provider shall provide a completion bond that is payable to the Division sufficient~~
17 ~~to ensure that land purchase, construction, monitoring, and maintenance are completed. A non-~~
18 ~~wasting endowment or other financial mechanism for perpetual maintenance and protection shall~~
19 ~~be provided.~~

20 ~~(j) PURCHASE OF BUFFER MITIGATION CREDITS FROM A PRIVATE OR PUBLIC MITIGATION BANK.~~
21 ~~Applicants who choose to satisfy some or all of their mitigation by purchasing mitigation credits from a private or~~
22 ~~public mitigation bank shall meet the following requirements:~~

23 (1) — ~~The mitigation bank from which credits are purchased is listed on the Division's webpage~~
24 ~~(<http://portal.ncdenr.org/web/wq/swp/ws/401>) and has available riparian buffer credits;~~

25 (2) — ~~The mitigation bank from which credits are purchased shall be located as described in Paragraphs~~
26 ~~(e), (f), and (g) of this Rule; and~~

27 (3) — ~~After receiving a mitigation acceptance letter from the mitigation provider, proof of payment for~~
28 ~~the credits shall be provided to the Division prior to any activity that results in the removal or~~
29 ~~degradation of the protected riparian buffer.~~

30 ~~(k) PAYMENT TO THE RIPARIAN BUFFER RESTORATION FUND.~~ Applicants who choose to satisfy some
31 or all of their mitigation determination by paying a compensatory mitigation fee to the Riparian Buffer Restoration
32 Fund shall meet the requirements of Rule .0269 of this Section. Payment made to the NC Ecosystem Enhancement
33 Program (the Program) shall be contingent upon acceptance of the payment by the Program. The Program shall
34 consider their financial, temporal, and technical ability to satisfy the mitigation request to determine whether they
35 shall accept or deny the request.

1 ~~(4) DONATION OF PROPERTY.~~ Applicants who choose to satisfy their mitigation determination by donating real
2 property or an interest in real property to fully or partially offset an approved payment into the Riparian Buffer
3 Restoration Fund pursuant to Paragraph (k) of this Rule shall meet the following requirements:

4 ~~(1) The value of the property interest shall be determined by an appraisal performed in accordance~~
5 ~~with Part (l)(4)(D) of this Rule. The donation shall satisfy the mitigation determination if the~~
6 ~~appraised value of the donated property interest is equal to or greater than the required fee. If the~~
7 ~~appraised value of the donated property interest is less than the required fee calculated pursuant to~~
8 ~~Rule .0269 of this Section, the applicant shall pay the remaining balance due.~~

9 ~~(2) The donation of real property interests shall be granted in perpetuity.~~

10 ~~(3) Donation of real property interests to satisfy the full or partial payments under Paragraph (k) shall~~
11 ~~be accepted only if such property meets the following requirements:~~

12 ~~(A) The property shall be suitable for restoration or enhancement to successfully produce~~
13 ~~viable riparian buffer compensatory mitigation credits in accordance with Paragraph (i)~~
14 ~~of this Rule or the property shall be suitable for preservation to successfully produce~~
15 ~~viable riparian buffer compensatory mitigation credits in accordance with Part (m)(2)(C)~~
16 ~~of this Rule;~~

17 ~~(B) The property shall be located in an area where the Program may reasonably utilize the~~
18 ~~credits, based on historical or projected use, to offset compensatory mitigation~~
19 ~~requirements;~~

20 ~~(C) The estimated cost of restoring or enhancing and maintaining the property shall not~~
21 ~~exceed the projected mitigation credit value of the property minus land acquisition costs,~~
22 ~~except where the applicant supplies additional funds acceptable to the Program for~~
23 ~~restoration or enhancement and maintenance of the buffer;~~

24 ~~(D) The property shall not contain any building, structure, object, site, or district that is listed~~
25 ~~in the National Register of Historic Places established pursuant to Public Law 89-665, 16~~
26 ~~U.S.C. 470 as amended;~~

27 ~~(E) The property shall not contain any hazardous substance or solid waste such that water~~
28 ~~quality may be adversely impacted, unless the hazardous substance or solid waste can be~~
29 ~~properly remediated before the interest is transferred;~~

30 ~~(F) The property shall not contain structures or materials that present health or safety~~
31 ~~concerns to the general public. If wells, septic, water, or sewer connections exist, they~~
32 ~~shall be filled, remediated or closed at owner's expense in accordance with state and local~~
33 ~~health and safety regulations before the interest is transferred. Sewer connections in Zone~~
34 ~~2 may be allowed for projects in accordance with Part (m)(2)(E) of this Rule;~~

35 ~~(G) The property and adjacent properties shall not have prior, current, or known future land~~
36 ~~use that may jeopardize the functions of the compensatory mitigation;~~

1 ~~(H) The property shall not have any encumbrances or conditions that are inconsistent with the~~
2 ~~requirements of this Rule or purposes of Rules .0233, .0243, .0250, .0259, .0267 or .0607~~
3 ~~of this Subchapter;~~

4 ~~(I) Fee simple title to the property or a perpetual conservation easement on the property shall~~
5 ~~be donated to the State of North Carolina, a local government, or a qualified holder under~~
6 ~~N.C. General Statute 121-34 et seq. and 26 USC 170(h) of the Internal Revenue Code as~~
7 ~~approved by the Department and the donee; and~~

8 ~~(J) The donation shall be accompanied by a non-wasting endowment or other financial~~
9 ~~mechanism for perpetual maintenance and protection sufficient to ensure perpetual long-~~
10 ~~term monitoring and maintenance. However, when a local government has donated a~~
11 ~~perpetual conservation easement and entered into a binding intergovernmental agreement~~
12 ~~with the Program to manage and protect the property consistent with the terms of the~~
13 ~~perpetual conservation easement, that local government shall not be required to provide a~~
14 ~~non-wasting endowment.~~

15 ~~(4) At the expense of the applicant or donor, the following information shall be submitted to the~~
16 ~~Program with any proposal for donations or dedications of interest in real property:~~

17 ~~(A) Documentation that the property meets the requirements of Subparagraph (1)(3) of this~~
18 ~~Rule;~~

19 ~~(B) A US Geological Survey 1:24,000 (7.5 minute) scale topographic map, county tax map,~~
20 ~~USDA Natural Resource Conservation Service County Soil Survey Map, and county road~~
21 ~~map showing the location of the property to be donated, along with information on~~
22 ~~existing site conditions, vegetation types, presence of existing structures, and easements;~~

23 ~~(C) A current property survey performed in accordance with the procedures of the North~~
24 ~~Carolina Department of Administration, State Property Office as identified by the State~~
25 ~~Board of Registration for Professional Engineers and Land Surveyors as set forth in 21~~
26 ~~NCAC 56-1600.~~

27 ~~(D) A current appraisal of the value of the property performed in accordance with the~~
28 ~~procedures of the North Carolina Department of Administration, State Property Office as~~
29 ~~identified by the Appraisal Board as set forth in 21 NCAC 57A-0501; and~~

30 ~~(E) A complete attorney's report on title with a title commitment for policy in the name of the~~
31 ~~State of North Carolina in the dollar amount of the appraised value.~~

32 ~~(m)(o) ALTERNATIVE BUFFER MITIGATION OPTIONS. Some or all of a buffer mitigation requirement may~~
33 ~~be met through any of the alternative mitigation options described in this Paragraph.~~ Any proposal for alternative
34 mitigation shall meet the requirements of Paragraphs ~~(e)~~, ~~(e)~~, ~~(f)(l)~~, and ~~(g)(m)~~ of this Rule, Rule and the
35 requirements set out in the named Subparagraph addressing that ~~option~~: option, and the following requirements:

36 ~~(1) Any proposal for alternative mitigation shall be provided in writing to the Division and shall meet~~
37 ~~the following content and procedural requirements for approval by the Division:~~

1 ~~(A) — Projects that have been constructed and are within the required monitoring period on the~~
2 ~~effective date of this Rule are eligible for use as alternative buffer mitigation. Projects~~
3 ~~that have completed monitoring and released by the Division on or before the effective~~
4 ~~date of this Rule are eligible for use as alternative buffer mitigation for a period of 10~~
5 ~~years from the effective date of this Rule;~~

6 ~~(B) — The mitigation area shall be placed under a perpetual conservation easement or similar~~
7 ~~legal protection mechanism to provide for protection of the property's nutrient removal~~
8 ~~and other water quality functions; and~~

9 ~~(C) — A completion bond payable to the Division sufficient to ensure that land purchase,~~
10 ~~construction, monitoring, and maintenance are completed.~~

11 ~~(D) — A non-wasting endowment or other financial mechanism for perpetual maintenance and~~
12 ~~protection shall be provided.~~

13 ~~(2) — ALTERNATIVE BUFFER MITIGATION — NON-STRUCTURAL, VEGETATIVE OPTIONS~~

14 ~~(A)(1)~~ Coastal Headwater Stream Mitigation. Wooded buffers planted along Outer Coastal Plain
15 headwater stream mitigation sites may also be approved as riparian buffer mitigation credit as long
16 as if the site meets all applicable requirements of Paragraph ~~(+)(n)~~ of this Rule. In addition, all
17 success criteria ~~including woody species, stem density, diffuse flow, and stream success criteria~~
18 ~~specified in the approval of the stream mitigation site~~ by the Division ~~in any required written~~
19 ~~approval of the site~~ shall be met. The area of the buffer shall be measured perpendicular to the
20 length of the valley being restored. The area within the proposed buffer mitigation site shall not
21 also be used as wetland mitigation. The applicant or mitigation provider shall monitor the site for
22 at least five years from the date of planting ~~by providing and provide~~ annual reports for written
23 Division approval.

24 ~~(B)(2)~~ Buffer Restoration and Enhancement on Non-Subject Streams. Restoration or enhancement of
25 buffers may be conducted on intermittent or perennial streams that are not subject to the applicable
26 riparian buffer rules Rules .0233, .0243, .0250, .0259, .0267, .0607 of this Subchapter. These
27 streams shall be confirmed as intermittent or perennial streams by Division staff certified per G.S.
28 143-214.25A using the Division publication, Methodology for Identification of Intermittent and
29 Perennial Streams and Their Origins (v.4.11, 2010) available at no cost at
30 <http://portal.ncdenr.org/web/wq/swp/ws/401/waterresources/streamdeterminations>. The proposal
31 shall meet all applicable requirements of Paragraph ~~(+)(n)~~ of this Rule.

32 ~~(C)(3)~~ Preservation of Buffer on Non-subject streams. Preservation of buffers on intermittent or
33 perennial streams that are not subject to the applicable riparian buffer ~~rules~~ Rules .0233, .0243,
34 .0250, .0259, .0267, .0607 of this Subchapter may be proposed in order to permanently protect the
35 buffer from cutting, clearing, filling, grading, and similar activities that would affect the
36 functioning of the buffer. These streams shall be confirmed as intermittent or perennial streams by
37 Division staff certified per G.S. 143-214.25A using the Division publication, Methodology for

1 Identification of Intermittent and Perennial Streams and Their Origins (v.4.11, 2010). The
2 preservation site shall meet the requirements of Subparagraph (n)(1) and the requirements set forth
3 in 15A NCAC 02R .0403(c)(7), (8), and (11). Subparagraphs (i)(1), (i)(3), (i)(6) and Parts
4 (1)(3)(D), (E), (F), (H) and (J) of this Rule. Preservation shall be proposed only when restoration
5 or enhancement with an area at least equal to the footprint of the buffer impact has been proposed.
6 The area of preservation credit within a buffer mitigation site shall comprise of no more than 25
7 percent of the total area of buffer mitigation.

8 ~~(D)~~(4) Preservation of Buffers on Subject Streams. Buffer preservation may be proposed on streams that
9 are subject to the applicable riparian buffer Rules .0233, .0243, .0250, .0259, .0267, .0607 of this
10 Subchapter in order to permanently protect the buffer from cutting, clearing, filling, grading, and
11 similar activities that would affect the functioning of the buffer beyond the protection afforded by
12 the existing buffer rules on sites that meet the definition of a preservation site, site along streams,
13 estuaries, or ponds that are subject to buffer rules. The preservation site shall meet the
14 requirements of Subparagraph (n)(1) and the requirements set forth in 15A NCAC 02R
15 .0403(c)(7), (8), and (11). Subparagraphs (i)(1), (i)(3), (i)(6) and Parts (1)(3)(D), (E), (F), (H) and
16 (J) of this Rule. Preservation shall be proposed only when restoration or enhancement of an area
17 at least equal to the footprint of the buffer impact has been proposed. The area of preservation
18 credit within a buffer mitigation site shall comprise of no more than 25 percent of the total area of
19 buffer mitigation.

20 ~~(E)~~ Sewer easement within the buffer. If the proposed mitigation site contains a sewer easement in
21 Zone 1, that portion of the sewer easement within Zone 1 is not suitable for buffer mitigation. If
22 the proposed mitigation site contains a sewer easement in Zone 2, the portion of the sewer
23 easement in Zone 2 may be suitable for buffer mitigation if:

- 24 (i) ~~the applicant or mitigation provider restores or enhances the forested buffer in~~
25 Zone 1 adjacent to the sewer easement;
- 26 (ii) ~~the sewer easement is at least 30 feet wide;~~
- 27 (iii) ~~the sewer easement is required to be maintained in a condition that meets the~~
28 vegetative requirements of the collection system permit; and
- 29 (iv) ~~diffuse flow is provided across the entire buffer width.~~

30 ~~The proposal shall meet all applicable requirements of Paragraph (i) of this Rule for~~
31 ~~restoration or enhancement. The proposal shall meet all applicable requirements of Part~~
32 ~~(m)(2)(C) of this Rule for preservation.~~

33 ~~(F)~~(5) Enhancement of grazing areas adjacent to streams. Buffer credit at a 2:1 ratio shall be available
34 for an applicant or mitigation provider who proposes permanent exclusion of grazing livestock
35 that otherwise degrade the stream and riparian zone through trampling, grazing, or waste
36 deposition by fencing the livestock out of the stream and its adjacent buffer. The applicant or
37 mitigation provider shall provide an enhancement plan as set forth in Paragraph ~~(i)~~(n). The

1 applicant or mitigation provider shall demonstrate that grazing was the predominant land use since
2 the effective date of the applicable buffer rule.

3 ~~(G)~~(6) Mitigation on ephemeral channels. For purposes of riparian buffer mitigation as described in this
4 Part, an "ephemeral channel" is defined as a natural channel exhibiting discernible banks within a
5 topographic crenulation (V-shaped contour lines) indicative of natural drainage on the 1:24,000
6 scale (7.5 minute) quadrangle topographic map prepared by the U.S. Geologic Survey, or as seen
7 on digital elevation models with contours developed from the most recent available LiDAR ~~data~~
8 data available at no cost at <http://www.ncfloodmaps.com/lidar.com>. Ephemeral channels only
9 flow for a short period of time after precipitation in the immediate area and do not have periods of
10 base flow sustained by groundwater discharge. The applicant or mitigation provider shall provide
11 a delineation of the watershed draining to the ephemeral channel. The entire area proposed for
12 mitigation shall be within the contributing drainage area to the ephemeral channel. The ephemeral
13 channel shall be directly connected to an intermittent or perennial stream and contiguous with the
14 rest of the mitigation site protected under a perpetual conservation easement. The area of the
15 mitigation site on ephemeral channels shall comprise no more than 25 percent of the total area of
16 buffer mitigation. The proposal shall meet all applicable requirements of Paragraph ~~(i)~~(n) of this
17 Rule for restoration or enhancement. The proposal shall meet all applicable requirements of Part
18 ~~(m)(2)(C)~~ (o)(3) or (o)(4) of this Rule for preservation.

19 ~~(H)~~(7) Restoration and Enhancement on Ditches. For purposes of riparian buffer mitigation as described
20 in this Part, a "ditch" is defined as a man-made channel other than a modified natural stream that
21 was constructed for drainage purposes. To be used for mitigation, a ditch shall meet all of the
22 following criteria:

23 ~~(i)~~(A) be directly connected with and draining towards an intermittent or perennial stream;

24 ~~(ii)~~(B) be contiguous with the rest of the mitigation site protected under a perpetual conservation
25 easement;

26 ~~(iii)~~(C) stormwater runoff from overland flow shall drain towards the ditch;

27 ~~(iv)~~(D) be between one and three feet in depth; and

28 ~~(v)~~(E) the entire length of the ditch shall have been in place prior to the effective date of the
29 applicable buffer rule.

30 The width of the restored or enhanced area shall not be less than 30 feet and shall not exceed 50
31 feet for crediting purposes. The applicant or mitigation provider shall provide a delineation of the
32 watershed draining to the ditch. The watershed draining to the ditch shall be at least four times
33 larger than the restored or enhanced area along the ditch. The perpetual conservation easement
34 shall include the ditch and the confluence of the ditch with the intermittent or perennial stream,
35 and provide language that prohibits future maintenance of the ditch. The proposal shall meet all
36 applicable requirements of Paragraph ~~(i)~~(n) of this Rule for restoration or enhancement.

1 ~~(3)(8)~~ ~~ALTERNATIVE BUFFER STORMWATER TREATMENT OPTIONS~~ Stormwater Treatment
2 Options. All stormwater treatment options shall meet the following requirements:

3 ~~(A)~~ — For all structural options: ~~Riparian buffer restoration or enhancement is required with an~~
4 ~~area at least equal to the footprint of the buffer impact, and the remaining mitigation~~
5 ~~resulting from the multipliers may be met through structural options;~~

6 ~~(B)~~(A) Structural measures already required by other local, state or federal rule or permit cannot
7 be used as alternative buffer ~~mitigation, mitigation credit,~~ mitigation credit, except to the extent such
8 measure(s) exceed the requirements of such rule or permit. Stormwater Best Management
9 Practices (BMPs), including bioretention facilities, constructed wetlands, infiltration
10 devices and sand filter are all potentially approvable (BMPs) by the Division for
11 alternative buffer ~~mitigation, mitigation credit.~~ Other BMPs may be approved only if they
12 meet the nutrient removal levels outlined in Part ~~(3)(C)(8)(B)~~ of this Subparagraph.
13 Existing or planned BMPs for a local, state, or federal rule or permit may be retrofitted or
14 expanded to improve their nutrient removal if this level of treatment would not be
15 required by other local, state, or federal rules. In this case, the predicted increase in
16 nutrient removal may be counted toward alternative buffer ~~mitigation, mitigation credit;~~

17 ~~(C)~~(B) Minimum treatment levels: Any structural BMP shall provide at least 30 percent total
18 nitrogen and 35 percent total phosphorus removal as demonstrated by a scientific and
19 engineering literature review as approved by the Division. The mitigation proposal shall
20 demonstrate that the proposed alternative removes an equal or greater annual mass load
21 of nutrients to surface waters as the buffer impact authorized in the authorization
22 certificate or variance, following the calculation of impact and mitigation areas pursuant
23 to Paragraphs (d), (e), and (f) of this Rule. To estimate the rate of nutrient removal of the
24 impacted buffer, the applicant or mitigation provider shall use the NC Division of Water
25 Quality – Methodology and Calculation for determining nutrient reductions associated
26 with Riparian Buffer Establishment available at no cost at
27 [http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-](http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-47f890d9329a&groupId=38364)
28 [47f890d9329a&groupId=38364](http://portal.ncdenr.org/c/document_library/get_file?uuid=55c3758f-5e27-46cf-8237-47f890d9329a&groupId=38364), ~~a method previously approved by the Division.~~ The
29 applicant or mitigation provider may propose an alternative method of estimating the rate
30 of nutrient removal for consideration and review by the Division;

31 ~~(D)~~(C) All proposed structural BMPs shall follow the Division's 2009 Stormwater Best
32 Management Practice Design Manual available at no cost at
33 <http://portal.ncdenr.org/web/lr/bmp-manual>. If a specific proposed structural BMP is not
34 addressed in this Manual, the applicant or mitigation provider shall follow Chapter 20 in
35 this Manual for approval;

36 ~~(E)~~(D) All structural options are required to have Division approved operation and maintenance
37 plans;

- 1 ~~(F)~~(E) All structural options are required to have continuous and perpetual maintenance and
 2 shall follow the Division's 2009 Stormwater Best Management Practice Design Manual;
 3 ~~(G)~~(F) Upon completion of construction, the designer for the type of BMP installed shall certify
 4 that the system was inspected during construction and that the BMP was constructed in
 5 ~~substantial~~ conformity with plans and specifications approved by the Division;
 6 ~~(H)~~(G) Removal and replacement of structural options: If a structural option is proposed to be
 7 removed and cannot be replaced on-site, then a structural or non-structural measure of
 8 equal or better nutrient removal capacity in a location as specified by Paragraph (f) and
 9 (g) of this Rule shall be constructed as a replacement;
 10 ~~(I)~~(H) Renovation or repair of structural options: If a structural option must be renovated or
 11 repaired, it shall be renovated to provide equal or better nutrient removal capacity than as
 12 originally designed; and
 13 ~~(J)~~(I) Structural options as well as their operation and maintenance are the responsibility of the
 14 landowner or easement holder unless the Division gives written approval for another
 15 responsible party to operate and maintain them. Structural options shall be located in
 16 recorded drainage easements for the purposes of operation and maintenance and shall
 17 have recorded access easements to the nearest public right-of-way. These easements
 18 shall be granted in favor of the party responsible for operating and maintaining the
 19 structure, with a note that operation and maintenance is the responsibility of the
 20 landowner, easement holder or other responsible ~~party.~~ party; and
 21 (K) ~~Bonding and endowment. A completion bond payable to the Division sufficient to~~
 22 ~~ensure that land purchase, construction, monitoring, and maintenance are completed and~~
 23 ~~a non-wasting endowment or other financial mechanism for perpetual maintenance and~~
 24 ~~protection shall be provided.~~

25 ~~(4)~~(9) [CASE BY CASE] APPROVAL FOR OTHER ALTERNATIVE BUFFER MITIGATION
 26 OPTIONS. Other alternative riparian buffer mitigation options that have not been specified within
 27 this Rule may be considered by submitted to the Division for review and recommendation to the
 28 Environmental Management Commission on a case-by-case basis. basis [as long as the options
 29 otherwise meet the requirements of this Rule.] Any proposal submitted under this paragraph shall
 30 provide documentation or calculations to demonstrate that the proposed alternative mitigation
 31 option removes an equal or greater annual mass load of nutrients to surface waters as a riparian
 32 buffer. [Prior] Upon completion of the Division's review, and prior to recommendation to the
 33 Environmental Management [Commission] Commission, the Division shall issue a after 30-
 34 calendar day public notice through the Division's Water Quality Certification Mailing List in
 35 accordance with 15A NCAC 02H .0503 website and the DWRwetlands Listserve as long as the
 36 options otherwise meet the requirements of this Rule. Division staff shall present their
 37 recommendations recommendations, including comments received during the public notice

1 ~~[period]~~ period, to the Environmental Management Commission for a final decision. ~~decision with~~
2 ~~respect to any proposal for [other] alternative buffer mitigation options not specified [described] in~~
3 ~~this Rule. If approved by the Environmental Management Commission, the alternative buffer~~
4 ~~mitigation option may be proposed by other applicants and mitigation providers.~~

5 ~~(n) ACCOUNTING FOR BUFFER CREDIT, NUTRIENT OFFSET CREDIT AND STREAM MITIGATION~~
6 ~~CREDIT. Buffer mitigation credit, nutrient offset credit, wetland mitigation credit, and stream mitigation credit shall~~
7 ~~be accounted for in accordance with the following:~~

- 8 ~~(1) Buffer mitigation used for buffer mitigation credit shall not be used for nutrient offset credits;~~
9 ~~(2) Buffer mitigation or nutrient offset credit shall not be generated within wetlands that provide~~
10 ~~wetland mitigation credit required by 15A NCAC 02H .0506; and~~
11 ~~(3) Either buffer mitigation or nutrient offset credit may be generated on stream mitigation sites as~~
12 ~~long as the width of the restored or enhanced riparian buffer meets the requirements of~~
13 ~~Subparagraph (i)(1).~~
